

# Index

## A

Algebraic, 61–63, 68, 81, 85, 89, 181  
Alzheimer disease, 189, 191, 196  
Approximating kernel, 63–66  
Arnol'd tongues, 31–33  
Attack system, 81, 82, 85, 87, 89

## B

Betti number, 183–186  
Betweenness, 201–203, 205  
Bifurcations, 13, 14, 16, 18, 25, 74–76  
Big data throughput, 127  
Bose-Einstein condensate, 47, 49, 50, 53, 55, 56  
Bose-Hubbard model, 37  
Brain atrophy, 190, 191  
Brain waves, 150, 151, 153, 154  
Brain-brain interactions, 151, 153  
Brodmann atlas, 171

## C

Canonical transformation, 42  
Chaotic attractor, 3, 6, 10, 83  
Chua's circuit, 93–95  
Class-I neurons and Class-II neurons, 25, 33  
Clustering, 94, 97, 99, 100, 103, 127–130, 133–140, 203, 206  
Cognitive map, 179, 180, 186  
Communities detection, 199, 200, 203–205, 207, 208  
Configurable network, 93  
Consensus analysis, 199, 201, 205–207  
Cortical spreading depression (CSD), 168, 169, 171, 172, 177

Coupled nonlinear oscillators, 97  
Coupling feedback, 146, 147  
Criticality, 105, 107, 108, 124, 210  
Cross-correlation, 98, 147–150  
Cross-validation analysis, 200, 204, 207  
Cryptanalysis, 81, 82, 85, 89  
Cryptographic system, 82

## D

Dirichlet distribution, 5, 6  
Distributed computational model of neural activity, 169, 177

## E

Elementary adaptive automata, 106  
Energy spectrum, 37, 40–47, 54  
Entropy, 5, 147, 148

## F

Feature selection, 192–194  
Fuzzy clustering, 206, 207

## G

Gene co-expression networks, 200  
Gross-Pitaevskii equation, 50

## H

Hebbian learning, 127–131, 133, 138, 140  
Hippocampal neurophysiology, 179, 186  
Husimi function, 39, 40, 48

**J**

Jensen–Shannon divergence, 7, 9

**K**

Kullback–Leibler divergence, 7

**L**

Lyapunov exponent, 14, 15, 32, 33, 74, 85, 116, 117, 119

**M**

Many-body quantum systems, 37  
 Master slave synchronization, 81, 85, 87, 89  
 Mathematical model, 3, 61, 62, 189  
 Memductance, 63–67  
 Microwave chaotic source, 71, 72  
 Migraine aura, 168  
 Multi-electrode arrays (MEA), 210, 211, 217, 218  
 Multinomial distribution, 5  
 Multiplex networks, 189–192, 195, 196  
 Mutual information, 147, 148

**N**

Neural networks, 21, 33, 94, 106–108, 128, 138, 196, 210  
 Neuroautonomic regulation, 146  
 Neuron, 21, 22, 24–28, 31–33, 130–132, 135, 139, 140, 169, 180, 182, 210  
 Neuronal avalanches, 209, 210, 213, 217  
 Neuronal culture models, 209, 211  
 Node-network two-way interaction, 108  
 Nonlinear Schrödinger equation, 39, 51  
 Nonlinearity, 52, 54, 56, 57, 62

**O**

Optical lattice, 37, 38, 49, 50, 53

**P**

Period-doubling bifurcation, 74, 75  
 Phase locking, 27, 31, 32, 34  
 Phase response, 21, 22, 24–28, 31–33

Phase space, 3, 4, 6–11, 41, 46  
 Physiologic state, 145–147, 150–154, 156–159, 161, 162  
 Power law, 105–107, 109, 119, 120, 124, 129, 209–217, 219  
 Power-law statistics, 105

**R**

Random forests, 189, 193, 194  
 Random number, 47, 81–85, 89  
 Random number generator, 81, 89  
 Reaction-diffusion processes on complex geometry, 168  
 Real geometry of human brain, 177  
 Realistic neuron models, 127, 216  
 Resonance web, 13  
 Robust criticality, 124  
 Rulkov model neuron, 21, 26, 131  
 Rulkov neuron, 21, 26, 33, 129–131, 135, 136, 138, 139

**S**

Schizophrenia, 199, 200  
 SiGe microchip, 75, 79  
 Spatial navigation, 186  
 Structural MRI, 191  
 Support vector machines (SVM), 189, 193–196  
 Synchronization, 13, 27, 81, 85–89, 93, 94, 96–103, 147, 148

**T**

TaO memristor, 61–63, 66–68  
 Temporal excitation patterns, 167, 176, 177  
 Time delay stability (TDS), 145, 147–152, 154–159, 161, 162  
 Topology, 73, 74, 76, 93, 95, 97, 99–103, 106–111, 119–122, 124, 147, 152–154, 161, 181, 183  
 Transient network, 179, 181, 182

**W**

Wireless communications, 71, 72
