

Index

A

Accelerated kernels, 115
Algorithm complexity, 53
Applications, 135
Artificial neuron, 14

B

Backpropagation algorithm, 28
BigData applications, 8
Binary search algorithm, 95

C

Control flow paradigm, 3

D

DAPI interface, 119
Data dependencies, 130
Data streams, 3
DataFlow approach, 3
Deep learning, 142

E

Expressing parallelism, 130

F

Field Programmable Gate Arrays, 129
Fourier method, 52
Fourier space, 71
FPGA accelerators, 32

G

Gradient Descent, 30

H

High-performance system, 131
Highest performance dataflow, 120

I

Implementing the kernels, 115

L

Latency, 62
Level of data reusability, 8

M

MAPI interface, 119
MaxDebug tool, 121
Maxeler DataFlow computing technology
concept, 65
MaxIDE, 48, 120
MaxJ programming language, 48
MaxOrchestrator, 125
MaxSkins, 124
Maxtop, 120
Moore's law, 128
Multiscale Dataflow Computing Systems, 133

N

Neural networks, 16
Number of transistors, 128

O

Optimizing the implementation, 115

P

Pipeline structure, 130

Poisson equation, 48

Power constraints, 146

Program analysis, 115

R

ROM memories, 34

S

SAPI interface, 119

Silicon incur, 146

Single Layer Perceptron, 14

SLiC API interface, 19

SLiC skins, 123

Slicccompile, 123

Spatial parallelism, 130

Speed of execution, 99

Systolic architecture, 131

T

The Internet of Things, 144

V

Von Neumann, 128
