

Index

A

- Addition theorem, 98, 102, 103, 113, 114, 232
- Alumina (Al₂O₃), 158
- Aluminum (Al), 153
- Analytic continuation, 93, 100, 104, 112
- Angular momentum, 5, 22
- Antenna superdirectivity, 94
- Associated Legendre function, 51, 61–63, 67

B

- Band gap, 205
- Basis
 - non-orthogonal, 18
- Boundary Element Method (BEM), 122

C

- Cauchy–Schwarz’s inequality, 176
- Circumscribed sphere, 156
- Collocation (point matching), 222
- Combined Helmholtz Integral Equation Formulation (CHIEF), 109
- Cone-sphere, 223, 225
- Continuous Method of Auxiliary Integral Equation (CMASIE), 105
- Control of light
 - by light, 17
 - linear, 18
 - non-linear, 21
- Convergence, 56, 78, 79, 87, 96, 99, 103, 122, 134, 136, 170, 175, 223, 228, 229

CPU timings

- QR or principal modes, 31
- Cylinder, 58
- Cylindrical Bessel function, 98

D

- Defect particle, 75
- Defining resonances, 8
- Differential Scattering Cross Section (DSCS), 11, 56, 157
- Diffraction, 169, 170
 - plane wave, 186
- Dipole, 78
 - layered, 124
 - magnetic, 49
 - vertical, 130
- Discontinuous Galerkin Time-Domain (DGTD), 122, 141
- Discrete Dipole Approximation (DDA), 72, 122
- Discrete Fourier Transform (DFT), 101
- Drude-Lorentz model, 23, 151, 152
- Dual-Surface Integral Equations Method (D-SIEM), 109
- Dyadic Green function, 36, 174

E

- Effective Spatial Bandwidth (EBW), 221, 231
- Electron Energy Loss Spectroscopy (EELS), 122, 133, 147
- Ellipse, 65
- Equivalent source methods, 170

Error bounds on electromagnetic fields, 7
 Extended Boundary Condition (EBC), 109
 Extended Boundary Condition Method (EBCM), *see* -field method (NFM)
 Extended Integral Equation (EIE), 114

F

Far field pattern, 85, 86
 Faraday's law, 99
 Fermi velocity, 21
 Fictitious source methods, 170
 Filamentary Current Method (FCM), 223
 Finite Difference Time Domain (FDTD), 72, 156
 Finite Element Method (FEM), 122, 123, 156
 Fourier base, 173
 Fourier series, 98, 110
 Fredholm integral equation, 36, 39
 Fresnel coefficients, 75, 125, 127

G

Gaunt coefficients, 63, 65, 67
 Gauss elimination, 56, 58, 114
 Gauss–Kronrod quadrature, 159
 Gauss–Legendre quadrature, 62
 Generalised Lorenz-Mie Theory (GLMT), 26
 Generalized Multipole Technique (GMT), 93, 147, 225
 Generalized Point Matching Technique (GPMT), *v*, 79, 121, 156
 Geometrical interpretation of scattering, 3
 Gold (Au), 10, 14, 20, 26, 140, 141, 158, 160
 Gram matrix, 4
 Graphics Processing Unit (GPU), 72, 143
 Grating, 169, 170, 186
 bisinusoidal, 200
 Green function, 130
 Green's function operator, 129
 Green's theorem, 72
 Green Tensor of the half-space, 72

H

Hankel function of the first kind, 98
 Helmholtz's equation, 175
 Hermitian scattering operator, 6
 Huygens principle, 54
 Hydrodynamical model, 21
 longitudinal modes, 22

I

Ill-conditioned system, 106, 181, 226
 Invariant imbedding method, 40
 Iterative procedure, 35

J

Jacobian matrix, 180, 190

L

Least-squares problem, 170
 Lorentz force, 149
 Lyapunov surfaces, 3

M

Maxwell's equations, 2
 tangential surface fields, 2
 Message Passing Interface (MPI), 36
 Method of Auxiliary Sources (MAS), 94, 221, 223, 228
 Method of Fictitious Sources (MFS), 223
 Mie modes, 5
 Mie potential, 49
 Mie theory, 1, 3
 comparison of results, 9
 modes, 5
 multipoles for spheres, 10
 orthogonality of power flux, 9
 principal cosines, 5
 Modal expansion, 170
 Modal-expansion approach, 25
 Modes
 biorthogonal, 6
 irrotational, 21
 orthogonal, 4
 Modified Bessel function of second kind, 134
 Moment method, 222
 Multiple Multipole Program (MMP), 72, 122, 223
 Multipolar expansion of principal modes, 3
 Multipole for spheres, 10
 Multipoles
 distributed, 3

N

Non-locality in dielectric response, 21
 Null-field condition, 53
 Null-field method (NFM), 50
 Null-Field Method with Discrete Sources (NFM-DS), 53, 109
 Numerical tests on principal mode methods, 29

O

- Operators
 - Hermitian, 8
 - non-Hermitian, 8
- Optical glass BK7, 192
- Optical modes
 - principal, 2
- Optical particle scanner, 75
- Orthogonality, 9
- Orthogonality relation, 66, 67

P

- Particle
 - aspherical, 50
 - axisymmetric, 50
 - embedded, 71
 - fictitious, 73
 - multiple, 1
 - nonspherical, 37
 - oblate, 50, 55
 - penetrable, 78
 - plasmonic, 121
 - prolate, 50
- Perfect scatterers and absorbers, 23
- Photonic crystal, 205
- Plasmon resonance, 198
- Plasmonic nanostructure, 122
- Polarization
 - senkrecht (German), 187
- Pole placement rules, 223, 225
- Principal angles, 5
- Principal modes, 2
 - biorthogonal modes, 6
 - convergence, 31
 - defining resonances, 8
 - geometrical interpretation of scattering, 3
 - multipolar expansion, 3
 - principal angles, 5
 - similarity to Mie modes, 5

Q

- QR and SVD decompositions, 29

R

- Radiation condition, 3
- Rayleigh hypothesis, 221, 232
- Refractive index, 182
- Region of influence, 224
- Ricatti-Bessel function, 67
- Riccati equation, 39

S

- Scanning Near-Field optical Microscopy (S-NOM), 16
- Scattered field singularities, 226
- Scatterer
 - PEC, 114
- Scattering
 - inelastic, 18
- Scattering Cross-Section (SCS), 71
- Semi-analytical method, 72
- Shell
 - inhomogeneous spherical, 45
 - spherical, 43
- Single particle resonance, 10
- Singularity, 129
- Sommerfeld integration path, 129
- Spherical Bessel function, 37, 51, 63
- Spherical Hankel function, 37, 51
- Spherical Neumann function, 63
- Spherical Vector Wave Functions (SVWF), 51
- Spheroid, 58
- Stratified medium, 128
- Stratton-Chu representation, 20
- Substrate
 - infinite, 73
- Superellipse, 64
- Supershapes, 14
- Surface Green's functions, 7
 - convergence, 7
- Surface Integral Equation (SIE), 72
- Symmetry labels l and m , 5

T

- Tangential surface fields, 182
- Term
 - longitudinal, 21
- T-matrix method, 72
- Total Scattering Cross-Section (TSC), 71
- Transition matrix, 50

V

- Volume Integral Equation (VIE), 72

W

- Wave
 - longitudinal, 21, 22
 - transverse, 21

Y

- Yasuura's method, 170
