

The Klaus Tschira Stiftung

The Klaus Tschira Stiftung was created in 1995 by the physicist Klaus Tschira (1940–2015). It is one of Europe’s largest privately funded non-profit foundations. The foundation promotes the advancement of natural sciences, mathematics, and computer science and strives to raise appreciation of these fields. The focal points of the foundation are “Natural Sciences – Right from the Beginning,” “Research,” and “Science Communication.” The involvement of the Klaus Tschira Stiftung begins in kindergartens and continues in primary and secondary schools, universities, and research facilities. The foundation champions new methods in the transfer of scientific knowledge, and supports both the development and intelligible presentation of research findings. The Klaus Tschira Stiftung pursues its objectives by conducting projects of its own but also awards subsidies after approval of applications. To foster and sustain work on selected topics, the foundation has also founded its own affiliates. Klaus Tschira’s commitment to this objective was honored in 1999 with the “Deutscher Stifterpreis,” the award conferred by the National Association of German Foundations.

The Klaus Tschira Stiftung is located in Heidelberg and has its head office in the Villa Bosch, once the residence of Carl Bosch, a Nobel laureate in chemistry.
