

Biographies

Ricardo Filipe Sereno Póvoa received the BSc, MSc, and PhD degrees in Electrical and Computer Engineering from Instituto Superior Técnico (IST), Universidade de Lisboa, Portugal, in 2011, 2013, and 2018, respectively. Since 2013, he has a research position at the Instituto de Telecomunicações, where he is now a postdoctoral researcher, working on analog and mixed-signal circuit design. In February 2016, he joined the Marine Engineering Department of Escola Superior Náutica Infante D. Henrique, where he teaches Naval Electronics and Automation courses. At Instituto de Telecomunicações, he is currently working in the field of low-power IC design, applied to biometric applications and healthcare. His research interests are mainly in analog and mixed-signal circuit design, RF CMOS circuitry and applications, and electronic design automation.

João Carlos da Palma Goes João Carlos da Palma Goes (S'95–M'00–SM'09) graduated from Instituto Superior Técnico (IST), Universidade de Lisboa, Portugal, in 1992, and received the MSc and PhD degrees from the same university in 1996 and 2000, respectively. From December 1993 to February 1997, he worked as a Senior Researcher at Integrated Circuits and Systems Group (ICSG) at IST doing research on data converters and analog filters. From March 1997 until March 1998, he was the Project Manager at Chipidea SA. He has been with the Department of Electrical Engineering (DEE) of the Faculdade de Ciências e Tecnologia (FCT) of Universidade Nova de Lisboa (UNL) since April 1998, where he is currently an Associate Professor. Since 1998 he has been a Senior Researcher at the Center for Technology and Systems (CTS) at UNINOVA. In 2003 he cofounded and served as the CTO of ACACIA Semiconductor, a Portuguese engineering company specialized in high-performance data converter and analog front-end products (acquired by Silicon and Software Systems, S3, in October 2007). Since November 2007 he does his lectures with part-time consultancy work for S3. Since 1992 he has participated and led several national and European projects in science, technology, and training. His scientific interests are in the areas of low-power and low-voltage analog

integrated circuits, data converters, built-in self-test and self-calibration techniques, and optimization and automatic sizing of analog circuits. He has published over 70 papers in international journals and leading conferences, and he is a co-author of *Systematic Design for Optimization of Pipelined ADCs* (Springer, 2001), *Low Power UWB CMOS Radar Sensors* (Springer, 2008), and *VLSI Circuits for Biomedical Applications* (Artech House, 2008). Prof. Goes has been a member of the Portuguese Professional Association of Engineers since 1992. He has served as a reviewer for journals and conferences, and he is a member of the Technical Program Committee of ISCAS (IEEE) and AMICSA (ESA) Conferences.

Nuno Cavaco Gomes Horta (S'89–M'97–SM'11) received the Licenciado, MSc, PhD, and Habilitation degrees in Electrical Engineering from Instituto Superior Técnico (IST), Universidade de Lisboa, Portugal, in 1989, 1992, 1997, and 2014, respectively. In March 1998, he joined the IST Electrical and Computer Engineering Department. Since 1998, he is, also, with Instituto de Telecomunicações, where he is the head of the Integrated Circuits Group. He has supervised more than 90 postgraduation works between MSc and PhD theses. He has authored or co-authored more than 150 publications such as books, book chapters, international journal papers, and conference papers. He has also participated as researcher or coordinator in several national and European R&D projects. He was the General Chair of AACD 2014, PRIME 2016, and SMACD 2016 and was a member of the organizing and technical program committees of several other conferences, e.g., IEEE ISCAS, IEEE LASCAS, DATE, NGCAS, etc. He is the Associate Editor of *Integration*, *The VLSI Journal*, from Elsevier, and usually acts as reviewer of several prestigious publications, e.g., IEEE TCAD, IEEE TEC, IEEE TCAS, ESWA, ASC, etc. His research interests are mainly in analog and mixed-signal IC design, analog IC design automation, soft computing, and data science.
