# Index

## Symbols

$\mathfrak{g}$ -module, 206

## A

abelian category, 103

ACC, 85

additive category, 103

admissible enumeration of vertices, 173

admissible vertex, 169

affine graph, 163

Artin's theorem (on rational characters), 45

Artinian module, 86

Artinian ring, 100

## B

basic element in a PSH algebra, 119

bounded operator, 50

brick, 159

Burnside's solvability theorem, 33

## C

Cartan matrix, 163

Casimir element, 209

character of a representation, 8

class functions, 12

cohomology groups, 91

compact group, 47

compact operator, 52

complementary series of  $SL_2(\mathbb{R})$ , 80

completely reducible representation, 6

complex, 90

continuous representation, 49

convolution product, 57

Coxeter functors, 173

Coxeter transformation or element, 173

Coxeter-Dynkin graph, 163

cuspidal degree, 139

cuspidal representation, 139

## D

DCC, 86

defect, 181

discrete series of  $SL_2(\mathbb{R})$ , 79

dominant order (for partitions), 124

double cosets, 38

dual pair, 110

dual representation, 4

duality functor, 170

## E

Euler characteristic, 159

exact complex, 91

extension groups, 97

extension quiver, 195

exterior tensor product, 3

## F

faithful representation, 14

finite length module, 87

finitely generated modules, 28

finitely represented algebra, 199

Fock representation, 76

Fourier inversion formula, 67

Fourier transform, 66

free module, 26

Frobenius algebra, 200

Frobenius reciprocity theorem, 35

## G

Gabriel's theorem, 167

Gel'fand-Graev module, 142

generalized Wiener algebra, 66

Grothendieck group, 104

group algebra, 2

## H

Haar measure, 48

Hall algebra, 139

Hall algebra, local, 139

Hall-Littlewood polynomials, 141  
 Harish-Chandra module, 207  
 harmonic polynomials, 61  
 head, 149  
 Hecke algebra, 41  
 Heisenberg group, 70  
 homology groups, 91  
 homotopy, 92  
 hook formula, 133  
 Hopf algebra, 115

**I**

idempotent, 88  
 indecomposable module, 88  
 indecomposable representation (of a quiver), 150  
 induced module, 34  
 induced representation, 36  
 induction functor, 35  
 injective module, 94  
 integral element, 30  
 intertwining operator, 4  
 irreducible module, 26  
 irreducible representation, 5  
 irreducible representation (of a quiver), 150  
 isotypic component, 13

**J**

Jacobi-Trudi formula, 130  
 Jacobson density theorem, 83  
 Jacobson radical, 99  
 Jordan-Hölder series, 86

**K**

Kostka numbers, 130  
 Koszul complex, 90  
 Krull-Schmidt theorem, 89

**L**

Lie algebra, 205  
 Littlewood-Richardson coefficients, 114  
 Lobachevsky plane, 78  
 locally compact group, 47  
 loop, 149

**M**

Mackey's criterion, 40  
 Maschke's theorem, 5  
 matrix coefficients of a representation, 55  
 module (over a ring), 25  
 multiplicity-free, 41

**N**

nilpotent ideal, 99  
 Noetherian module, 85

Noetherian ring, 29

**O**

oriented cycle (in a quiver), 149  
 orthogonality of characters, 10

**P**

parabolic induction, 138  
 partition, 105  
 partition (length of), 105  
 path, 152  
 path (one way path), 155  
 path algebra, 153  
 permutation representation, 1  
 Peter-Weyl theorem, 57  
 Pieri's rule, 127  
 Plancherel theorem, 68  
 Pontryagin duality, 65  
 positive (or semipositive) operator, 52  
 positivity of a Hopf algebra, 118  
 preinjective, 180  
 preprojective, 180  
 primitive element in a Hopf algebra, 116  
 primitive idempotent element, 101  
 principal series of  $SL_2(\mathbb{R})$ , 80  
 projective cover of a module, 95  
 projective generator of a category, 194  
 projective module, 93  
 projective resolution, 96  
 PSH algebra, 119

**Q**

quiver, 149

**R**

rank of a PSH algebra, 121  
 rational character, 45  
 reflexion functor, 169  
 regular indecomposable representation of a quiver, 180  
 regular representation, 2  
 regular representation of a quiver, 182  
 regular simple representation of a quiver, 182  
 representation (of a group), 1  
 representation (of a quiver), 150  
 representation variety, 161  
 restriction functor, 35  
 root, 164  
 root (imaginary), 177  
 root (real), 177  
 root (simple), 164

**S**

Schrödinger representation, 70

Schur functor, 113  
Schur's lemma, 5  
Schur-Weyl duality, 111  
self-adjoint operator, 52  
self-adjointness of a Hopf algebra, 118  
semisimple module (over a ring), 81  
semisimple ring, 84  
semistandard tableau, 129  
simple module, 26  
simple reflection, 172  
snake lemma, 92  
source, 149  
Springer-Zelevinsky theorem, 145  
Stone-von Neumann theorem, 70

**T**

tail, 149  
tame algebra, 199  
target, 149  
Tits form (of a graph), 163  
Tits form (of a quiver), 159  
topological group, 47

torsion element, 26  
torsion free module, 26  
trivial representation, 2

**U**

unitary dual, 55  
unitary representation, 49

**W**

Wedderburn-Artin theorem, 85  
weight module, 208  
weight of a semistandard tableau, 129  
Weyl group, 172  
wild algebra, 199

**Y**

Young diagram, 106  
Young symmetrizer, 106  
Young tableau, 106  
Young tableau (shape of), 106

**Z**

Zelevinsky's decomposition theorem, 121
