

Index

A

Adaptive expectations, 154
Agent-based artificial stock market, 71
Agent-based macroeconomic model, 205, 206, 215
Agent-based model, 18, 19, 21, 33, 74, 91, 207, 251, 253, 255, 259
Agent-based Scarf economy, 115, 127, 138
Agriculture, 92
Allocative efficiency, 44
Anderson-Darling (AD) test, 105
Artificial stock market, 76, 89, 181
ATS, *see* automated trading systems
Automated trading systems, 39
Average Imitation Frequency, 135–137

B

Barter, 144
Behavioral economics, 193
Bio-fuels, 91
Black swan, 283
Boom-and-bust, 196
Brownian motion, 194
Business cycle, 205, 206, 212, 215, 216

C

Canonical correlation, 223, 224, 229, 235, 242
Canonical correlation analysis, 247
Capital asset pricing model, CAPM, 230
Common agricultural policy, 92
Common factor, 233
Comovement, 225

Consumer search, 210, 211, 214, 215
Consumption set, 118
Continuous double auction, 42, 79
Coordination device, 120
Coordination failure, 118
CRSP value weighted portfolio, 231

D

Dark pools, 17–19
 dark pool usage, 18–20, 22, 25, 29, 30, 33
 midpoint dark pool, 21, 32, 33
 midprice, 22, 25, 32
Decentralized market, 146
Delta profit, 44
Disequilibrium, 114, 118, 136, 138
Double coincidence of wants, 117
DSGE, 141
Dual learning, 164, 171, 173

E

Economic factors, 240, 241
Economic growth, 206
Emergence, 282, 284
 (the whole is greater than the parts), 280, 281, 291
Emotions, 295
Endogenous dynamics, 194, 198
Entropy, 294
Equal risk premia, 224
Equilibrium, 194
Experimental economics, 41
Exploitation, 134, 138
Exploration, 122, 127, 131, 134, 136–138

F

Factor model, 224
 Fama-French-Carhart, 234
 Flash crash, 36
 Forward premium puzzle, 161–166, 169–171,
 173, 174, 176
 Fractures, 36, 40, 41, 61, 63, 65

G

Gödel–event, 280, 283
 Gödel sentences, 279, 283–285
 Genetic programming, 71, 76
 Geometric Brownian motion, 197
 Gibbs-Boltzmann distribution, 121
 Global financial crisis, 275, 283, 292, 297–299
 GMM, 226
 Guru, 191

H

Halting problem, 280, 287
 Hedonic, 205, 207–209, 211–213, 215
 Herd behavior, 181
 Herding, 196
 Heterogeneous agent models, 195
 Heterogeneous agents, 114, 115, 127–129
 Heteroskedasticity, 195
 Heuristics, 297
 HFT, *see* high-frequency trading
 High-frequency trading, 39, 71, 72
 Hyperbolic tangent function, 119

I

Imitation, 120, 125, 131, 133, 134, 136
 Incompleteness, 276, 277, 279, 282, 289
 Informational asymmetry, 288
 Information criteria, 232
 Innovation, 125, 131, 133, 134, 136
 product, 205–207, 209–212, 214–216
 Instability, 292, 296
 Institutions, 297, 298
 Integration measures, 243, 244
 Intensity of choice, 115, 122, 124–137
 Interaction effects, 125, 127, 136
 Irreducible uncertainty, 276, 286, 294, 296, 297

K

K-means clustering, 134
 Kolmogorov-Smirnov (KS) test, 105

L

Law of Effect, 121

Learning, 136

 individual learning, 114, 118, 119, 121,
 125, 138
 meta-learning, 114, 115, 121, 122, 124,
 125, 127, 131, 133
 social learning, 114, 118, 120, 121, 125,
 137, 138

Leontief payoff function, 114, 116

Leptokurtosis, 195

Life cycle assessment (LCA), 92

Limited information, 161, 163, 164, 166–171,
 174, 176

Liquidity traders, 21, 22

Lloyd's algorithm, 134

Local interaction, 136

Lucas critique, 292

Luxembourg, 92

M

Market efficiency, 162–165, 167, 168, 174

Market factor, 230

Market fraction, 125, 137

Market integration, 224

Market orders, 19, 25, 30, 32, 33

Market quality, 19, 20

 market volatility, 20, 25, 28–33
 spreads, 18–20, 32, 33

Market share, 205, 206, 211, 215, 216

Market volatility, 18, 19

Mean Absolute Percentage Error, 126, 127,
 136

Meta-preferences, 291

Minsky, 202

Mispricing risk, 277, 294

Multiple equilibria, 143, 151

N

Neoclassical economics, 38

Network structures, 181

Non-convergence, 118

Non-Markovian processes, 194

Non-tâtonnement, 114

Normalized Imitation Frequency, 131, 133, 134

Numerairé, 131

O

Order-driven market, 21

 continuous double-auction market, 18

 limit order book, 19

 market impact, 18, 23

 price improvement, 18, 20, 25

P

Paradoxes, 291, 293
 Persistent learning, 164, 167, 170, 174
 Perverse incentives, 196
 Positive feedback, 194
 Positive mathematical programming (PMP), 92
 Power law of practice, 134
 Predictability, 277, 279–281, 283
 Presburger arithmetic, 297
 Price discovery, 98
 Price stickiness, 146
 Price volatility, 181
 Principal components, 224
 Private information, 146
 Private prices, 116
 Production set, 118
 Product quality, 205, 206, 211, 213, 214, 217
 Product space, 205, 215
 Product variety, 206
 Profit dispersion, 44

Q

Qualitative predictions, 298
 Quantifiability
 of knowledge, 288
 of natural and social phenomena, 275
 of risk, 277, 287, 296
 of the future, 282
 of uncertainty, *see* irreducible uncertainty

R

Rational expectations equilibrium, 142
 Rational expectations hypothesis, 142
 Rationality, 286, 290, 292, 295
 Real business cycles, 143
 Recency parameter, 122
 Reference point, 122, 123
 Reflexivity, 292
 Regulations, 297, 298
 Reinforcement learning, 114, 121, 122, 131
 REIT, 224
 Representative agent, 141, 194
 Research and development, 207, 209–218
 Rice's theorem, 287, 288, 290
 Risk premia, 230
 Risk premia test, 241

Robot phase transition, 39, 40, 50, 53
 evidence for, 60, 64
 RPT, *see* robot phase transition
 R-Square, 225

S

Saturation condition, 117
 Scarf economy, 115, 118, 123, 127
 Self-reference, 290, 291, 293
 Separation of timescales, 197
 Shortsightedness, 295
 Smith's alpha, 43
 Social network, 181
 Soros, 202
 Stochastic differential equation, 194
 Stock markets, 224
 Subjective prices, 116, 117, 119
 Supercomputer technologies, 251, 252, 256, 259
 Symmetric rational expectations equilibrium, 150

T

Tacit knowledge, 288
 Tâtonnement, 114, 115
 Time-decay function, 119
 Turing machine, 280, 285–287, 289, 290

U

Uncertainty principle, 281
 Undecidability, 280, 285, 297

V

Volume weighted average price, 28

W

Walrasian auctioneer, 114
 Walrasian equilibrium, 142
 Walrasian general equilibrium, 115

Z

Zero-intelligence, 18, 19, 21, 33
