

Hax, A.C. and H.C. Meal (1975). Hierarchical integration of production planning and scheduling. In M.A. Geisler (Ed.), *TIMS Studies in Management*

Index

abstraction, 7
advanced planning system (APS), 196
aggregation, 72, 74, 212
algorithm
– branch and bound, 138
– evolutionary, 153
– genetic, 153, 157–160, 226
– iterated local search (ILS), 152
– local search, 150, 152
– progressive hedging, 180–185, 230
– simulated annealing (SA), 154–155, 226
– steepest descent with random restarts (SDRR), 153
– tabu search (TS), 156–157, 227
AMPL, 84–95, 232
APS, see advanced planning system
argmin, 152
arrival rate, 165
aspiration criterion, 156
ATP, see available to promise
available to promise (ATP), 197
backorder, 52, 203
backtracking, 161
bill of materials (BOM), 19, 22
– convergent, 205
– divergent, 27
binary variable, 136
binding constraint, 73
bit string, 157
bit-flip neighborhood, 150
BOM, see bill of materials
bottleneck, 73, 167
– sharp, 167
bound
– lower, 138
– upper, 140
branch and bound, 138–141, 148, 161, 225
– tree, 138
branching, 138
– direction, 138, 142
bullwhip effect, 197
capable to promise (CTP), 197
capacitated lot sizing problem (CLSP), 203–204, 207
capacity, 31
– constraint, 3, 35, 39, 51, 68, 211
– planning, 4, 166, 177
– rough cut, 79
center of a neighborhood, 150
changeover, 38, 38–43, 46, 76
– sequence dependent, 41
clearing function, 215
closed loop supply chain, 191
CLSP, see capacitated lot sizing problem
coefficient
– production, 208
conditional decision, 178
congestion, 164
connected neighborhood, 151
consolidation, 67
constraint, 13–14
– binding, 73
– capacity, see capacity constraint
– integrality, 17, 142
– requirements, 35
constraint programming, 160–161, 225, 232
constraint propagation, 160
contingency plan, 175
continuous flow shop problem, 212
contract
– supply chain, 198
CONWIP, 174, 214
cooling schedule, 154
cooperating solver, 161
costs
– changeover, 46
– fixed, 67
– holding, 45
– marginal, 45, 46
– sunk, 46
– tardiness, 52
CP, see constraint programming
crossover, 157
– one-point, 157, 159
– uniform, 159
CTP, see capable to promise
data, 9, 15, 168
DE, see deterministic equivalent
deadline, 51
deterioration, 210
deterministic, 16, 174
– equivalent (DE), 180
direct sequence, 148
disaggregation, 72, 213
discount
– all container, 69
– marginal, 69, 221
– transportation, 69
discrete lot sizing and scheduling
problem, 208
distribution requirements planning
(DRP), 193
diversification, 157, 226
domain reduction, 160
DRP, see distribution requirements
planning
due date, 51
empty summation, 11
end-of-horizon effects, 64
enterprise resources planning (ERP),
27, 37, 192
enumeration neighborhood, 151
ERP, see enterprise resources planning
evaluation function, 150, 151
evolutionary algorithm, 153
evolutionary algorithm, 153
execution, 5
facility location, 70, 221–222
family
– part, 74
feedback, 5
FIFO, see first-in-first-out
first-in-first-out (FIFO), 156
fitness, 158
fitness based selection, 157
flow shop problem, 212
flow time, 164
forward logistics, 191
function
– evaluation, 150, 151
– objective, 37
GA, see genetic algorithm
GAMS, 96–105, 232
general integer variable, 142
generational replacement, 159
genetic algorithm (GA), 153, 157–160, 226
GRASP, 153, 228
greedy heuristic, 147
greedy randomized adaptive search
procedure, 153, 228
hedging, 175
– progressive, 180–185, 229
heuristic, 145
– greedy, 147
– meta, see meta-heuristic
– search, 145–160
hierarchical production planning
(HPP), 213
holding costs, 45
horizon, 64, 208
HPP, see hierarchical production
planning
ILS, see iterated local search
indicator variable, 24, 203
information technology (IT), 191
– analytical IT, 192
– transactional IT, 192
integer, 17
integrality, 17, 142
integration, 189
intensification, 157, 226
inventory, 48, 66, 209
– ending, 65
– minimum inventory level, 66
– negative, 52
– tolerance, 65, 82
– work in process, see work in process
inventory
IT, see information technology
iterated local search (ILS), 152
JIT, see just-in-time
job, 148, 211
job shop problem, 212
just-in-time (JIT), 20
Kanban, 174
lead time, 19, 164
– load dependent, 167–174, 214
– nominal, 82
leaf, 180
LHS (left hand side), 14
linear program, 136
linear programming, 136
load dependent lead time, 167–174
loading, 166, 167
local minimum, 152
local search, 150, 152
location, 70
logistics, 70, 188–190
– forward, 191
– reverse, 191
long term memory, 157
lost sales, 47, 203
lot sizing, 19, 29, 202–208
low-level-coding, 23
lower bound, 138
LP, see linear program
– relaxation, 137
LP solver, 148, 225
machine scheduling, 211
macro, 47
make or buy, 4
manufacturing resources planning, see MRP II
marginal costs, 45, 46
master production schedule, 24, 28, 194
master SKU, 60
materials requirements planning, see mrp
Maximal MPL, see MPL
memory
– long term, 157
– short term, 156
meta-heuristic, 152, 226
MINC (a cost minimization problem), 13
minimum
– local, 152
MIP, see mixed integer program
MIP solver, 225
mixed integer program (MIP), 135
– binary, 136
model, 2, 7–18, 123, 223, 231
– deterministic, 174
– linear, 17
– multi-criteria, 223
– multi-stage, 202
– multi-stage probabilistic, 178
– multi-stage stochastic, 178
modeling language, 81–133, 135, 231
Mosel, 123–133, 232
move, 150
– construction, 150
– evaluation, 151
– insertion, 151
– k-opt, 151
– kick, 152
– swap, 150
– transformation, 150
movement
– product, 66–70
MRP II, 31–38, 49, 78, 89, 99, 107, 116, 126, 200
– relaxed, 137
MRP II, 31–38, 49, 78, 89, 99, 107, 116, 126, 200
– relaxed, 137
multi-criteria optimization, 223
multi-stage model, 202
multiple routings, 59, 209
mutation, 157
nearest neighbor, 225
neighbor, 150
neighborhood, 150–154
– bit-flip, 150
– center of, 150
– connected, 151
– enumeration, 151
nervousness, 28
network design, 201
notation, 9
notational variable, 47
objective function, 11–13, 37
offspring, 159
operator
– crossover, 157
– mutation, 157
OPL, 114–122, 232
optimization, 2, 15, 223–225
– multi-criteria, 223
optimization model, 2, see model
order management, 193, 196
ordered set, 84, 123
overtime, 49–51
part aggregation, 74
part family, 74, 212
partially explored (variable), 139
passing, 169
period, 178
perishability, 210
permutation, 148
pilot method, 229

plan
– contingency, 175
– stable, 62
planning, 4, 193
– aggregate, 213
planning horizon, 23, 65, 202, 209
policy, 163, 164, 209
– reorder, 210
population, 157
positional sequence, 148
priority rule, 225
product movement, 66–70
production coefficient, 208
production planning, 4, 70, 175, 200
– hierarchical, 213
production tree, 126
program
– linear, 136
– mixed integer, 135
progressive hedging, 180–185, 229
– integer convergence, 183, 185, 230
pull, 174
pull system, 214
push system, 214

queue, 164, 167
queuing, 164, 166
queuing theory, 164

random, 16, 154, 163
– yields, 163
relaxation, 137
– LP, 137
reorder point, 163
reorder policy, 163, 210
replacement
– generational, 159
– steady-state, 159
representation, 148, 151
– direct sequence, 148
– positional sequence, 148
– sparse, 98
requirements constraint, 35
resource, 31, 32, 165, 166
– bottleneck, 73
– critical, 168
– non-bottleneck, 74
resource constrained project scheduling
– problem, 212
reverse logistics, 191
RHS (right hand side), 14

root, 138
routing(s), 31, 70
– alternate, see routing(s), multiple
– alternative, see routing(s), multiple
– multiple, 59, 76, 209

SA, see simulated annealing
safety stock, 66, 210
scatter search, 227
scenario, 16, 174, 175
scheduled receipts, 19
scheduling, 4, 5, 211
– machine, 211
scheme
– solution representation, 148, 151
SCP, see supply chain planning
SDRR, see steepest descent with
random restarts
semi-continuous, 141
sensitivity analysis, 225
sequence dependent changeover, 41
sequencing problem, 148, 212
server, 165–167
service rate, 165
set, 11
– ordered, 84, 123
– special ordered, 143
setup, 46
shipping, 67
short term memory, 156
shortage, 66
simulated annealing (SA), 154–155, 226
simulation, 230
– discrete event, 230
single minute exchange of die (SMED),
42, 201
single-stage model, 202
SKU, see stock keeping unit
– master, 60
slack, 74
SMED, see single minute exchange of
die
solution, 3
– current, 152
– representation scheme, 148, 151
solver, 15, 225
– cooperating, 161
SOS, see special ordered set
sparse format, 123
sparse representation, 98
special ordered set (SOS), 143–145
– SOS1, 143, 160
– SOS2, 143, 160
stable plan, 62
stage, 178
steady-state replacement, 159
steepest descent, 152
– with random restarts (SDRR), 153
stochastics, 16, 163
stock keeping unit (SKU), 19
strategy, 4
subcontracting, 60, 209
summation, 8
– empty, 11
sunk costs, 46
sunset constraint, 91, 101, 110, 130
supply chain, 1, 70
– closed loop, 191
supply chain contract, 198
supply chain management, 1, 4–5, 187–200
supply chain planning (SCP), 4, 55, 192
supply chain planning matrix, 195
swap move, 150
symbol, 9

tabu list, 156
– length, 156
tabu search (TS), 156–157, 227
tardiness, 51–55, 65
tardiness cost, 52
temperature, 154
time bucket, 178
transformation, 150
transport, 66–70, 219
– discount, 69
transportation problem, 220
traveling salesman problem (TSP), 211, 220
tree
– branch and bound, 138
– root node, 138
TS, see tabu search
TSP, see traveling salesman problem
type, 213
uncertainty, 15, 163, 175
upper bound, 140
utilization, 32, 165–167, 175
variable, 9
– binary, 136
– free, 139
– general integer, 142
– integer, 17, 135
– notational, 47
– partially explored, 139
