Subject Index

A

- age theory 53
- alignment 38,148
- analyzer, electrostatic cylindrical mirror 72
- analyzer, electrostatic 30° parallel - plate 14
- analyzer, electrostatic 45° parallel - plate 132
- analyzer, electrostatic retarding field 95
- analyzer, electrostatic spherical sector 76
- analyzer, 90° magnetic 132
- analyzer transmission function 85
- angular acceptance 106
- angular distribution, stationary outgoing 57
- anisotropic emission 75
- anisotropic population of continuum states 32
- anisotropy 62
- anisotropy parameters 41,46,48, 108
- asymmetric collision system 17, 26
- asymmetry parameter 43
- atomic stopping power 57
- Auger electrons 94
- autoionisation lines 81
- average relative energy loss 55

B

- backward to forward ratio 62
- bare projectiles 19
- beam-foil convoy electrons 105

- beam-foil spectroscopy 116, 130,148
- Bessel function 34
- Bethe 3
- binary encounter approximation 1
- binary encounter peak 48
- Born approximation, first order 19,23,28,33,43,44,67,122
- second order 20,23,29,33
- Born approximation,
- bound-bound excitation 116
- bound state charge transfer 20
- bound state coherences 33
- bound state wave functions 34
- Briggs & Drepper 8
- Brinkmann & Kramers 3,4
- Brinkmann & Kramers theory 20
- bulk of solids 109

C

- capture cross section 94,116
- channeling experiments 109
- charge asymmetry 41
- charge change cross section 80
- charge equilibrium regime 140
- charge nonequilibrium regime 140
- charge transfer, bound state 20
- charge transfer into continuum 1
- classicyl trajectory Monte Carlo method 87
- coherence of continuum states 33
- coincidence data 109
- coincidence electron energy spectra 84
- collision system, asymmetric 17,26
- confluent hypergeometric function 23

- continuum distorted wave method 122
- continuum electron capture 5,79,91
130
- continuum states, anisotropic
population of 32
- continuum states, coherence of 33
- continuum states, projectile
centered 33
- continuum wave function,
Coulomb 34
- continuum wave function,
molecular 28
- contour plots 77
- convoy electron, beam foil 116, 130
- core excitation 83
- Coulomb continuum wave
function 34
- Coulomb explosion 130
- Coulomb factor 105
- Coulomb focussing 112 ff, 140
- critical angle 3
- cross section for charge
change 80
- cross section, capture 94,116
 - , double capture 80
 - , inelastic diffusion 58
 - , ionisation 3,79
 - , molecular break-up 145
 - , projectile frame 62
 - , total scattering 55
 - , transfer ionisation 80,88
 - , transport 55
- cusp anisotropies 32,49
- cusp shape 73,142
- cusp width 72,75,106
- cusp yield 83,89,135
- cut off 2
- cylindrical mirror electrostatic
analyzer 72

D

- delayed capture lines 94
- density matrix 32,39
- dielectronic recombination 82
- diffusion theory 52,55
- dipole moment 41
- dipole transition 121
- dipole transition rates 121
- Dirac - Fock program 104
- direct Coulomb capture 123
- double capture cross section 80
- double scattering mechanism 3,4
- doubly differential cross
section (DDCS) 5,81
- DDCS, anisotropies of 32
 - , discontinuity of 22 ff
 - , for electron ejection 92
 - , oscillation of 31
- doubly differential secondary
electron emission coefficient 106
- doubly excited states 83
- Drisko 4
- dynamical multipoles 33,37,39

E

- effective charge 101
- elastic electron scattering 52,
108
- electron capture on the con-
tinuum (ECC) 5,79,91,130
- electron capture into meta-
stable states 94
- electron capture to Rydberg
states (ECR) 65
- electron capture to Wake
(ECW) 146
- electron distribution, time
dependent 56

- electron flux 53
- electron loss to continuum (ELC) 9
- electron loss peak, shape of 9
- electron loss theory 9
- electron loss to Wake (ELW) 146
- electron - projectile interaction potential 29
- electron scattering coefficient 136
- electron scattering, elastic 108
- electron scattering, inelastic 108
- electron transfer and excitation 79,82
- electron transmission 143
- electrostatic analyzer 105
- electrostatic cylindrical mirror analyzer 72
- electrostatic 30° parallel plate analyzer 81
- electrostatic 45° parallel plate analyzer 132
- electrostatic retarding field analyzer 95
- electrostatic spherical sector analyzer 76
- energy loss, average relative 55
- escape depth 108
- expectation value 39, 49
- extended PL transport approximation 54

F

- Faddeev approximation, first order 18,19,25,26
- Faddeev approximation, second order 25
- fast collision systems 18

- field quenching effects 117
- field strength 22
- first order Born approximation 19, 23 ff,28,33,42,44,67,122
- first order CEC theory 9
- first order Faddeev approximation 18,19,25,26
- forward - backward asymmetry 41
- free particle Green's operator 18,29

G

- gas excitation 120
- Green's function for an infinite medium source 55
- Green's operator, free particle 18,29
- Greuling - Goertzel model 55

H

- half space solution 56
- heavy ion 94, 130
- heavy ion, molecular 130,146
- higher order perturbation theory 44

I

- impact energy 72
- impulse approximation 21,23,26,33
- independent particle model 87
- indirect electron loss to the continuum (IELC) 130,139
- inelastic diffusion cross section 58
- inelastic electron scattering 53,108
- inner shell vacancy production 91
- interference effects in electron capture 31

- intermediate target continuum state 26
 - interproton distance 30,31
 - inverted cusp 48
 - ion - atom collision 116
 - ionisation cross section 3,79
 - ionisation limit 20,33
 - ionisation, projectile 1,8,24
 - , target 19
 - , transfer 79
- J**
- K - shell transition 119
- L**
- laboratory frame 32
 - "last layer" hypothesis 116,122
 - Legendre polynomials 44,84
 - Liouville formalism 38
 - longitudinal distribution 106
 - L - shell ionisation 92
 - Lyman lines 120
- M**
- 90° magnetic analyzer 132
 - mean free path 52
 - mean free path for convoy electrons 109,136
 - mean free path for free electrons 109,136
 - mean free path for projectile charge change 109
 - molecular break-up cross section 145
 - molecular continuum wave function 28
 - molecular heavy io 130,146
 - momentum transfer 29,32
 - Monte Carlo method, classical trajectory 87
 - muffin - tin model 58
 - multiple scattering theory 33
 - multipole expansion 76
- N**
- O**
- off - shell effects 22
 - Oldham 6
 - Oppenheimer 4
 - Oppenheimer - Brinkman - Kramers (OBK) approximation 42,44
 - orbital velocity 2
 - orientation parameter 38
- P**
- 30° parallel - plate electrostatic analyzer 81
 - 45° parallel - plate electrostatic analyzer 132
 - partial wave expansion 20,34,85
 - partial wave population 33
 - peak position shift 64
 - perturbation theory, higher order 44
 - plasmon decay 53,57
 - PL transport approximation extended 54
 - point source 67
 - position sensitive detector 75
 - potential barrier 56
 - potential barrier model 87
 - potential, electron - projectile interaction 29

- projectile centered continuum states 32
- projectile frame cross section 62
- projectile ionisation 1,8,24
- projectile transferred momentum 29
- pseudospins 37
- pseudospin tensor 37
- PWBA 139

Q

- quenching of Rydberg states 124

R

- radiative electron capture (REC) 4,123,138
- radiative transition rates 117
- range 58
- resolution volume 47,106
- resonant transfer and excitation 83
- retarding field electrostatic analyzer 95
- Rudd and Macek 8
- Runge - Lenz operator 32
- Runge - Lenz vector 35
- Rydberg states 109,148
- Rydberg states, anisotropic population 32,34,148
- Rydberg states, electron capture to 65
- Rydberg states, quenching of 124

S

- Salin's theory 92
- screened Coulomb potential 18

- secondary emission 52,57
- second Born term 4
- second Born term in charge exchange theory 7
- second order Born approximation 20,23,29,33
- second order Faddeev approximation 25
- semiclassical theory 17
- series expansion, symmetric 18
- shape of the electron loss peak 9
- single collision conditions 32
- solid state effects 19
- spectrometer transmission function 85
- spherical multipoles 37,38
- spherical sector electrostatic analyzer 76
- stark effect 52
- stark mixing 123
- stationary outgoing angular distribution 57
- stopping power, atomic 57
- symmetric series expansion 18
- symmetric velocity spectrum of ELC 9
- syntetic kernels 53,54

T

- target gas density distribution 68
- target ionisation 19
- Taylor expansion 84
- Thomas 2
- Thomson 1
- three dimensional electron distribution 33
- three particle picture 17
- threshold law 33

- threshold excitation 50
- time dependent electron distribution 56
- time differential measurements 52
- total scattering cross section 55
- transfer ionisation 79
- transfer ionisation cross section 80,88
- transition amplitude 25,28
- transition form factor 37
- transition, dipole 121
- -, radiative 117
- transmission function, spectrometer 85
- transport approximation, extended PL 54
- transport coefficient 58
- transport cross section 55
- transport equation 112
- transport kernel 56
- transverse distribution 106
- two center problem 18
- two photon decay 119

Y

- yrast line 118

Z

- zero velocity limit 32,45

U**V****W**

- Wake potential 130
- Wake riding electrons (WRE) 130
- wave expansion, partial 20,34,85
- wave function, bound state 34
- -, molecular continuum 28
- wave mechanical treatments 3
- wave method, continuum distorted 122
- Wolff's treatment 54
