

# Subject Index

- Activation analysis 8, 30, 31  
Angular broadening 19, 49, 53, 60, 67
- Background contribution 15, 36, 66  
Beam damage 39, 54, 62, 68, 71, 74
- Charged particle bombardment  
— effect on superconductivity 42  
— electro-deposited hard gold 43  
— gettering phenomenon 44  
— glass hydration process 43  
— implantation 51, 54  
— properties of amorphous silicon 42  
— tellurium electrodeposition 61
- Doppler broadening 23, 35
- Energy-depth relation 11–13, 52, 58, 65  
Energy-depth straggling 19
- Hydrogen determination  
— by charge particle detection 11, 29, 37, 46, 50, 54, 59, 61  
— by charge neutron detection 29, 48  
— by charge  $\gamma$ -ray detection 31  
— by charge x-ray detection 31  
— spatial distribution 29  
— standard 11, 17, 33, 59, 66  
— used for the study of the capability to contain UCN in a neutron “bottle” 42
- Hydrogen diffusion study  
— in palladium 70, 74, 76–79  
— in silicon 73  
— in stainless steel 69–70  
— in tantalum 72  
— in titanium 71
- Interaction of nuclear radiation with matter 9
- Multiple scattering 18, 19, 20, 45, 51, 59
- Neutron capture 29  
Neutron generator 9, 29, 51, 63  
Neutron radiography 30  
Neutron scattering 29  
Nuclear reaction 9  
— cross-section 10, 29, 44, 56  
— energy balance ( $Q$  value) 15, 62  
— energy of products 12, 45, 46, 52  
— energy threshold 12, 27  
— excitation curve 32  
— excitation function 10, 46  
— excitation function with resonance structure 10, 14, 15, 22, 32, 34, 40, 57  
— yield 11, 27, 30
- Particle energy spectrum 11, 50, 57, 75  
Particle range 9, 13, 46, 59  
Particle stopping parameter 11, 18, 53, 60, 66  
Particle stopping power 9, 12, 19  
Particle type identification 9, 16, 23, 57, 63  
Phase transition  
— boundary 80  
— in the D-Pd system 78–80
- Reliability coefficient 15, 17  
Resolution function 18, 21  
— for the neutron scattering method 67  
— for the p-p scattering method 60  
Rutherford backscattering 52, 56
- Secondary ion mass spectrometry (SIMS)  
7
- Standard deviation 17, 21, 41
