

Subject Index

- abducens nucleus 89
- acceleration and neuronal activity 79, 80, 84
- afterdischarges 132
- afterimage motion 55
- afternystagmus, optokinetic, see optokinetic a.
- anoxic terminal depolarization 166
 - -, negative shift 161
- anticonvulsants 132
- asphyxiation, DC shifts 162
 - , ion changes 166-168
- attention 4
 - , decision making 4
 - , gaze 2, 3
 - , initiation of saccades 19
 - , shift 3
 - , system 29, 30
 - , visual 23, 25, 38
 - , -, engagement and disengagement 29
 - , -, parietal cortex 21, 22
 - , -, perception 19
 - , -, saccades 5, 18ff.
- attentional system 19, 20, 23, 24
- axis rotation, off-vertical 46

- bicuculline 17
- brain, extracellular buffer capacity 154
 - revival 162
 - stem, oculomotor structures 15, 16
 - volume, hypercapnia 151

- calcium changes, CO₂ 156
 - , cortical, DC shifts 144, 145
 - , -, depth profile 145
 - , -, in seizures 144, 145
 - , extracellular, asphyxiation 166-168
 - level, cortex 144
- canal plugging 68
- cerebellum, extracellular space 147
 - , flocculus 40
 - , nodulus and uvula 63
 - , vermis, neuronal activity 107
- cervico-ocular reflex 69
- chemoreceptors 154
- chloride activity, asphyxiation 166-168
 - changes, CO₂ 157
 - , DC transients 146
- circulatory arrest 160, 161
- CO₂, correlations with ionic activity changes 155-158
 - , DC shifts 147-158, 161
 - , glia 154, 155
 - , membrane resistance 154
 - , neuronal activity 152-155
 - , synaptic transmission 153
- coil technique, scleral search 40
- colliculus superior 9, 10, 15-17, 26, 87
 - -, eye movement related cells 10
 - -, - position 11
 - -, real and self-induced movements 11
 - -, saccade initiation 17
- complex spike activity, modulation 101
- conflict stimulation 59, 85, 94, 102, 103
- contingent negative variation 129
- convulsions, tonic-clonic 132
- cortex, extrastriate 23, 24, 73
 - , -, presaccadic activation 26
 - , -, saccades 23, 25, 26
 - , inferotemporal 30
 - , parietal 24-26, 38
 - , -, discharges 21
 - , -, injuries, orienting of attention 22
 - , -, preparation of saccades 21, 22
 - , -, visual attention and information 21, 22
 - , striate 23
- cortical blood flow 160, 168
- corticopontine projection 73
- cuneate nucleus 74

- DC deflections, biphasic 165
 - deviations, depth profile 130
 - fast transients 129, 132
 - potential and gas pressures 147ff., 161ff.
 - - changes, event related 127, 129
 - potentials, definition 127-129
 - -, history 127
 - reactions, complex 160, 161
 - recordings, brain revival 162
 - shift 128, 129
 - -, CO₂ changes 147-158, 161
 - -, - pressure 168, 170
 - -, depth profiles 133, 134
 - -, EEG waves 152
 - -, fast EEG transients 134-139
 - -, focal seizures 130-132
 - -, generalized seizures 132, 133, 139, 151
 - -, glia 140, 154, 155, 166
 - -, increased oxygen 168, 170
 - -, interictal to ictal activity 142

- DC shift, ionic activity changes 136, 137, 140–147, 166–168
- –, neuronal activity 138–140, 163
 - –, oxygen 158ff.
 - –, pH 161
 - –, – changes 146, 147, 149, 157
 - –, polarity 134, 135, 137, 149
 - –, – reversal 130
 - –, positive, lack of depth profile 149
 - transients, positive 144
- decision making 5, 15–18
- – system 30
- dumping time constant 94
- EEG, conventional, frequencies 128
- , disappearance and DC record 162
 - , recovery, asphyxiation 162, 163
 - , spikes 139, 143
 - , –, glial cells 140
 - , –, reversal 144
 - , transients and DC shifts 134–139, 144
- enhancement effect 24
- epileptic activity, focal 130ff.
- express saccades, corrective 13–15
- –, execution 11
 - –, latency 6–8
 - –, reaction time of 13
- extracellular space, brain 147, 158
- eye fields, frontal 24–26, 38
- –, –, discharges 16
 - –, –, microstimulation 15, 22
 - –, –, second loop 15, 16
 - fixation and saccades 18ff.
 - movement generation 40
 - – signals, cancellation 39, 40
 - movements, compensatory 39
 - –, fast 63
 - –, flocculectomy 90
 - –, measurement of 40, 41
 - –, retinal projections 70ff.
 - –, slow 39, 40
 - –, – pursuit, mechanisms 54, 55
 - –, –, pathways 60–63
 - –, –, preprogramming 69
 - –, –, visual information 70
 - –, –, visually induced 47–54
 - –, smooth pursuit 47, 53, 54
 - –, suppression 105
 - –, vestibular neurons 76, 77
 - –, vision during 3, 4
 - position integrator 87
 - – sensitivity, mossy fibers 101, 102
 - – –, Purkinje cells 101
 - velocity signal 85, 86
- fixation 23, 24
- neurons 22
 - period 29
 - saccades 18, 19, 21, 22
 - suppression 59, 62
- flocculectomy, effects 90–96
- , smooth pursuit movements 93
- flocculus 74
- , connections 88–90, 104
 - , Purkinje cells, oculomotor command signal 105
- frontal eye fields 10, 12
- GABA, saccades 17
- gap paradigm 7, 9
- gaze palsy 85
- stabilization 63, 69
 - –, complexity 38
 - –, eye movements for 38
 - –, phylogeny 38
 - –, primates 38, 39ff.
- group y 89
- gyrus, prelunate 23
- hair cells 64
- head velocity signal 86
- hyperoxia, DC potentials 168–170
- hyperventilation 148, 150, 151
- hypoventilation 148, 151
- hypoxia 158ff.
- ictal activity 140
- discharges, prolonged 130, 131
- identification system, visual 29, 30
- image slip velocity 100
- interictal discharges 130
- spikes and potassium 141, 142
- invertebrate neurons, CO₂ 154
- ion activities in DC shifts 136, 137, 140–147, 166–168
- labyrinth, inactivation of canals 45
- , otolith organs 41
 - , semicircular canals 41, 45
- labyrinthectomy 68, 69
- labyrinthine lesions 68, 69
- localization system, visual 29, 30
- membrane potential, CO₂ 152, 154
- –, oxygen 163–165
- memory 4
- models of visual-vestibular interaction 60
- mossy fiber activity, visual-vestibular modulation 101ff.
- – endings 88
 - – pathway 88
- mossy fibers, vestibulocerebellar 104
- motion information, visual 60, 62
- muscimol 17
- negative shift, terminal 161, 162
- neglect syndrome 22
- neurectomy 68
- neuroglia, CO₂ 155
- , DC shifts 140, 154, 155, 166
 - , hypoxia 166
- neuronal activity and CO₂ 152–156

- neurons, I and E 153, 154, 163–165
- nodulus 63
 - and uvula, functions 107
 - and ventral uvula, connections 105, 106
- nucleus of the optic tract 70–72
 - prepositus hypoglossi 87
 - reticularis tegmenti pontis 70, 72, 73
- nystagmus, combined, gain of 57, 58
 - , gaze-paretic 90
 - , horizontal 66
 - , nystagmus, look 60, 61
 - , motor aspects 40
 - , neuronal models 60ff.
 - , nodular lesions and stimulations 106, 107
 - , off-vertical axis rotation 45–47, 66–68
 - , optokinetic 47–51, 68, 69, 76, 77, 82–84, 86, 87
 - , –, after-response 72
 - , –, cerebellectomy 95
 - , –, flocculectomy 91–93, 96
 - , –, gain 50, 51
 - , –, lesions 71
 - , –, mossy fibers 103, 104
 - , –, pathways 70ff.
 - , –, sigma 52
 - , –, stimulation 48
 - , –, velocity 48–50
 - , spontaneous 64
 - , stare 60, 61
 - , tilt-dump 46
 - , time constant 79
 - , velocity 57–59
 - , – storage mechanism 59–62
 - , vestibular 41ff.
 - , –, flocculectomy 90, 83
 - , –, habituation 56
 - , –, postrotatory 58
 - , –, primary and secondary 44
 - , –, suppression 58, 59, 62
 - , –, time constant 56
- oculomotor nuclei 74, 75
- off-vertical axis rotation 45–47, 66–68
- olivary nuclei 70
- olive inferior 89
- omnipause neurons 76
- optic system, accessory 70–72, 87
 - tract, nucleus of the 70–72
- optokinetic alternystagmus 68, 72, 76, 77, 83, 84, 86, 87, 132
 - –, CNS lesions 91–93
 - –, flocculectomy 96
 - –, mossy fibers 103, 104
 - –, nodulus 106
 - –, pathways 61
 - –, secondary 83
 - –, suppression 59, 62
 - –, time constant 56
 - –, velocity 52
 - –, vestibular neurectomy 97
 - nystagmus, see nystagmus
 - stimulation 57, 82
 - –, nystagmus suppressed 84
 - –, vestibular afferents 65–66
 - system 48, 49, 51
- otolith-canal interactions 55
- overlap-gap paradigm 7–9
- oxygen deficiency, neuronal activity 163ff.
 - , DC shifts 148, 150, 151, 158ff.
 - , intoxication 170
 - , ion changes 166–168
 - , pressure, CO₂ binding 168
- paraflocculus 88, 90
- paroxysmal depolarization shifts 137, 138
- penicillin 130, 131
- pentylentetrazol 132, 141, 144
- pH, asphyxiation 166–168
 - , changes, biphasic 147, 157
 - , cortical, CO₂ 157
 - , –, DC shifts 146, 147, 149, 157, 161
 - , –, depth profile 147
 - , –, seizure discharges 146, 147
- pontine nuclei 73
- potassium, activity, extracellular, in seizures 136, 137, 141–149
 - , changes and CO₂ 155
 - , depth profile 142, 143
 - , extracellular, asphyxiation 166–168
- premotor oculomotor organization 87
- pretectal complex 70–73
- pulvinar, real and self-induced movements 11
- Purkinje cell activity, visual-vestibular stimulation 96ff.
 - cells 88
- pursuit system, smooth movement 23, 61–63
- reaction time, saccadic 19–21
 - –, studies 5–7, 18
 - –, visual 19ff.
- readiness potential 129
- respiratory arrest 160, 161
- reticular formation 40–41, 74
 - –, paramedian pontine 85
 - –, raphe 89
 - nucleus, lateral 74
 - –, tegmentum pontis 89, 93
- retina, projections of 70ff.
- rotation, off-vertical axis 45–47, 66–68
 - , vertical axis 76
- saccade, anticipatory 13
 - , attention 18ff.
 - , central preparation time 8
 - , computation 11
 - , corollary discharge 11
 - , corrective 13, 14
 - , determination of coordinates 3, 5
 - , disturbance of computation 13
 - , electrical stimulation 22, 26
 - , express 6–9, 19
 - , –, training increase 26–28

- saccade, fast regular 19
 - , fixation 18ff.
 - , initiation of 11
 - , loop operation 25, 26
 - , metrics, computation 5, 6ff.
 - , –, retinal versus spatial coordinates 9, 10
 - , –, striate cortex 11
 - , –, superior colliculus 9, 10
 - , mossy fibers 101
 - , motor coordinates 9, 10
 - , ontogeny 26
 - , parameters 3, 4
 - , preparation 29
 - , preprogramming 8
 - , recalibration 69
 - , regular 7
 - , remembered 15
 - , spontaneous 15
 - , substantia nigra 17, 18
 - , suppression 22, 23
 - , three-loop concept 4, 5, 25, 27
 - , visually guided 6
 - , voluntarily initiated 3
 - , wrong performance 25
- saccadic reaction time 5–7, 18, 27
 - – –, stimuli 8
 - system, general functions 2
 - –, practice and learning 26ff.
- scotoma, central 50
- seizure activity, cortical neurons in 138, 139
 - –, extracellular space 147
 - –, generalized 132, 133
 - –, ion changes 136, 137, 140ff.
- sigma-movement 52
 - -optokinetic nystagmus 52
- slow potential changes, see DC potentials
- smooth pursuit, CNS lesions 93
 - –, Purkinje cell discharges 98–100
- sodium activity, asphyxiation 166–168
 - changes and CO₂ 156, 157
 - , cortical and DC transients 145
 - , –, depth profile 146
- spreading depression 152
- striate cortex, eye movement 11, 12
 - , preoccipital area 22
- substantia nigra and saccades 17, 18
- sustained potentials, see DC potentials

- target coordinates, computation of 11
 - location, memory 12
- termination of seizures, generalized 134
- thalamic stimulation, decrease of K⁺ activity 144

- uvula 63

- velocity signal, visual 39
 - storage mechanism 80, 82, 86, 107
- vestibular afferents 74
 - –, activity of 76
 - –, coding of visual information 68, 69
 - –, discharges 64–68
 - fibers to flocculus 89
 - neurectomy 96ff.
 - neurons, activity 75ff.
 - –, –, time constants 79
 - –, central 86, 104, 105
 - –, comparative studies 80–82
 - –, horizontal 76ff.
 - –, optokinetic stimulation 82, 83
 - –, smooth pursuit 86
 - –, type I etc. 75, 77ff.
 - –, vertical 76
 - –, vestibular stimulation 77ff.
 - nuclear complex 74, 75
 - nuclei 40
 - –, cell types 75, 76
 - –, flocculus 88, 89
 - –, inputs 64
 - –, neurons, activity, flocculectomy 95
 - nucleus, inferior 75, 89, 90
 - –, lateral 75
 - –, medial 74, 89, 90
 - –, superior 74
 - organ, canal planes 64
 - –, efferent innervation 67, 68
 - –, labyrinthine lesions 68, 69
 - –, microanatomy 64
 - –, transduction process 64
 - otoliths 64
 - stimulation, afferents 65–67
 - system, peripheral, features of 64–69
 - –, phylogeny 38
- vestibular-plus-eye-movement neurons 76, 78ff.
- vestibulo-cerebellum 88
 - -ocular reflex 39, 41ff.
 - –, development 43
 - –, gain and phase 42–45, 55
 - –, suppression 58–60, 62, 85–86
 - –, –, Purkinje cells 100
 - -oculomotor interaction 63
 - -only neurons 76, 78ff.
 - -visual interactions 40, 56ff.
- vision, phylogeny 38
- visual acuity 39
 - cortex, see striate cortex
 - –, ablation 71
 - fixation 3
 - information, distribution to brain structures 2
 - input 4
 - –, distribution to functional systems 4, 5
 - motion information 70ff.
 - objects, identification of 29
 - response, presaccadic modulation 24, 26
 - suppression, vestibular nystagmus 93, 94
- visual-oculomotor pathways 61
 - –, direct 96

- -, indirect 86
visual-vestibular conflict stimulation 85
- interaction 56ff., 87

- -, mathematical models 60ff.
- pathways 70-73
visually guided movements 2
