

List of Tables

- 2.1 Crucibles 21
- 3.1 Thermodynamic data for $\text{LaNi}_5\text{-H}$ 63
- 3.2 Thermodynamic data for FeTi-H 65
- 3.3 Thermodynamic data for $\text{ZrMn}_{2.8}$ 67
- 4.1 Ternary metal hydrides and deuterides studied by neutron diffraction: metal atom substructure, space group, lattice parameter and H(D) interstice 94–102
- 4.A Structure data for selected ternary metal hydrides and deuterides studied by neutron diffraction: space group, lattice parameters and atomic parameters 119–129
- 4.B Magnetic structures 130–131
- 5.1 Valence band and core level data for binary metal hydrides 152–155
- 5.2 Valence band and core level data for ternary metal hydrides 178–179
- 6.6.1 Heat of solution and formation of binary metal hydrides 266–269
- 6.6.2 Heat of formation of selected ternary metal hydrides 269–273
- 6.6.3 Heat of formation of some ternary metal hydrides calculated with the band-structure semi-empirical model 274–278
