A

Abiotic depletion potential (ADP), 424
Accelerators, 110
Acidification potential (AP), 424
Acoustic properties, 95
Activators, 37
Addition polymerization, 20, 24
Additives, 106, 167, 168
 functional, 47, 107
 organic/inorganic, 47
Adhesion promoters, 120
Aftershrinkage, 36
Aggressive media, 97
Aging, 102, 404
 protective measures, 105
Air pollution, 394
Aluminum alkyl halogenides, 26
Aluminum alkyls, 26
Aluminum hydroxide, 111
Amino acids, 52
Anthraquinone, 116
Antiblock agents, 118, 119
Antioxidants, 37, 105, 108, 127
Antiscorching agents, 38
Antislip agents, 118
Aquatic ecotoxicity potential (AETP), 424
Aramide fibers, 153
 sizing, 136
Automobile frontend, 295
Automobile interiors, 365
 structural components, 366
Automobile tires, particles/emissions, 381
Azo pigments, 116
Azodicarbonamide (ADC), 125

B

Batteries, lithium ion, polymeric/liquid electrolytes, 309
Benoaxines, 125
Benzole, 39
Biodegradable plastics, 365, 405
Bio-refineries, 400
Blast furnace injection, 410
Block copolymers, 68
Blowing agents, 37, 124, 397
Blown film systems, 199
Bond energy, 49
Braiding materials, 367
Branching, 58
 degree of, 35
Bromated flame retardants, 112
Burger model, 83
Butadiene-styrene, modulus of elasticity, 69

C

C fibers, sizing, 136
Caprolactam, 32
Car door sills, 294, 320
Carbon blacks, 113
Carbon fibers, 155
Carcinogenicity, 394
Carpet protection, 367
Cast PA, 168
Casting, 238
Catalysts, anionic coordinative, 21
 metallocenes, 22, 23, 27
 Ziegler–Natta, 26
Catalytic polymerization, 26
Cellulose, 400
