
Index

1-pyrenemethylamine hydrochloride (PMA), 67
3, 4, 9, 10-perylenetetracarboxylic dianhydride (PTCDA), 176
3-(amino-propyl) trimethoxysilane (APTMS), 192
4-[3-(4-fluorophenyl)-2-hydroxy-1-[1,2,4]triazol-1-yl-propyl]-benzotrile (FTB), 189
 ω -undecenyltrimethylammonium bromide (ω -UTAB), 114

A

alginate (ALG), 187
alumina, 1, 49
aminopropyltriethoxysilane (APTES), 38
anodic alumina oxide (AAO), 166
aragonite (CaCO_3), 39
atom transfer radical polymerization (ATRP), 7, 181
atomic layer deposition (ALD), 44, 134

B

B. sphaericus, 56
bacillus, 60, 64
bacterial cellulose (BC), 43
biomarkers, 15
biomaterials, 1, 64
biosensor, 19, 33, 135
bioseparation, 165, 188

C

cellulose, 34, 43

cetyltrimethylammonium (CTA), 122
chemical vapor deposition (CVD), 134, 160

Chilo iridescent virus (CIV), 54
chitosan (CHI), 187
Citeromyces matritensis, 60
collagen, 33, 34, 42
conducting polymer, 135, 150
confocal laser scanning microscopy (CLSM), 171
Coscinodiscus asteromphalus, 35
Coscinodiscus granii, 35
cuttlebone, 39
cyclic voltammetry (CV), 171
cyclic voltammograms (CVs), 86
cytochrome C (cyto-C), 185

D

dendrimer-encapsulated platinum nanoparticles (Pt-DENs), 64
dependence of sensitivity (S), 143
diatoms, 33, 34, 45
didodecyldimethylammonium (DDDMA), 122
dihexadecyldimethylammonium bromide (DDAB), 114
dimethylsulfoxide (DMSO), 40
dioctadecyldimethylammonium chloride (DODMACl), 113
DNA, 41
drug delivery, 1, 2, 3
drug release systems, 2

E

eggshell membranes (ESMs), 42
 electrocatalysis, 100, 101
 electron probe micro analysis (EPMA),
 145
 electrostatic interaction, 52, 54, 62
 electrostatic LbL-assembled Nanotubes,
 169
 energy dispersive X-ray (EDX) spectrum,
 38

F

$\text{Fe}_3\text{O}_4@\text{mSiO}_2$, 17
 ferritin, 44, 61
 field emission scanning electron
 micrograph (FE-SEM), 139
 fluorescein diacetate (FDA), 21
 fluorescence resonance energy transfer
 (FRET), 189
 fly eye, 61

G

gas sensor, 143
 gene carrier, 192
 glucose oxidase (GOD), 187
 glutaraldehyde (GA), 185
 green fluorescent protein (GFP), 192

H

hemoglobin (Hb), 187
 heteropolyanions (HPAs), 86
 hexagonally packed intermediate (HPI)
 layer, 56
 honeycomb film, 83
 horseradish peroxidase (HRP), 68
 human immunodeficiency virus (HIV),
 88
 human serum albumin (HSA), 185
 hydrogen bond, 8
 hydrogen bonding, 173, 175

hydrophobic surfactant-encapsulated
 clusters (HSECs), 90

I

indium tin oxide, 144
 inductively-coupled plasma (ICP) etch
 process, 70
 inorganic-organic hybrids, 59, 83, 90
 intermediate transfer layer (ITL), 70

L

Langmuir-Blodgett (LB), 83, 90, 108
 layer-by-layer (LbL), 19
 lower critical solution temperature
 (LCST) 7
L- α -dimyristoylphosphatidic acid
 (DMPA) 185

M

marangoni convection, 120
 mercaptopropyltrimethoxysilane (MPTS),
 10
 mesoporous silica nanoparticles (MSNs),
 9
 metal oxide nanomaterials, 33
 microcapsules, 102, 104
 molecularly imprinted polymer (MIP),
 190
 MSN@PNIPAM, 22, 23
 murine leukemia sarcoma virus (MLSV),
 88

N

N,N-di[10-[4-(4'-alkyloxybiphenyl)oxy]de-
 cyl]-*N,N*-dimethylammonium
 bromide ($C_n\text{BphC}_{10}\text{N}$, $n = 6, 8, 10,$
 12), 112
N-[12-(4-carboxylphenoxy)dodecyl]-*N*-
 dodecyl-*N,N*-dimethylammonium
 bromide (CDDA), 112

nanocapsules, 102
 nanoparticles (NPs), 1
 nanotube, 44
 nanotube-nanoparticle hybrid, 135
 natural substances, 46

P

[(PEI/PSS/PAH)/CdTe]₆, 171, 172
 photo-responsive system, 4
 pH-responsive system, 5
 (POD)-PSS complexes [(POD-PSS)c],
 187
 pollen grain, 39, 40, 46
 poly(4-vinyl-pyridine) (PVP), 173
 poly(acrylic acid) (PAA), 169, 173
 poly(allylamine hydrochloride) (PAH)
 102
 poly(ethylenimine) (PEI), 169
 poly(*N*-isopropylacrylamide) (PNIPAM)
 183
 poly(sodium styrenesulfonate) (PSS) 169
 poly(styrene-acrylic acid) (PSA), 102
 poly(vinyl alcohol) (PVA), 155
 polycarbonate (PC), 166
 polyelectrolyte (PE), 95
 poly-*L*-glutamic acid (PGA), 192
 poly-*L*-lysine hydrochloride (PLL) ,
 192
 polymer coated MSNs, 19, 22
 polyoxometalates (POMs), 83
 polypyrrole (PPy), 150, 171
 poly- β -(1,4)-*D*-glucosamine (chitosan), 96
 porous template, 192
 protein immobilization, 133, 152, 153

Q

quantum dots (QDs), 59

R

resorcinol-formaldehyde (RF) resin, 152

respiratory syncytial virus (RSV), 88
 RNA, 37

S

S. acidocaldarius (SAS), 70
S. shibatae, 60
 scanning electron micrograph (SEM),
 167
 schizophyllan (SPG), 40
 seed growth strategy, 35
 selected-area electron diffraction (SAED)
 analysis, 47
 selected-area electron diffraction (SAED)
 pattern, 139
 self-assembly, 32, 58, 63
Sepia officinalis, 39
 silica porous materials, 2
 silica, 1, 2 3
 silicon (Si), 45, 70
 silk fibroin fibers (SFF), 59
 single-walled carbon nanotubes (SWNTs),
 67
 S-layer, 70
 sol-gel process, 35, 47
 stimuli-responsive mesoporous silica, 4
 supercritical fluids (SCFs), 45
 surface sol-gel (SSG), 179
 surfactant-encapsulated clusters (HSECs),
 83
 swelling degree, 157

T

template synthesis method, 165, 193, 194
 template synthesis, 46, 54
 tetrachloroauric acid (HAuCl₄), 57
 tetradecyltrimethylammonium bromide
 (TTABr), 91
 tetraethylorthosilicate (TEOS), 33
 the least activation energy (E_a), 146
 thermo-responsive system, 7

thermotropic liquid crystal, 112
thin films, 44, 49
tin oxide, 47
titania, 1, 41, 42
titanium carbide (TiC), 158
tobacco mosaic virus (TMV), 37
total internal reflection fluorescence
(TIRF) image, 65
transmission electron micrograph (TEM),
137
transparent conductive oxide (TCO), 144
tris(hydroxymethyl)-phosphine-capped
gold nanoparticles (THP-Au NPs),
54

V

vapor-liquid-solid (VLS) technique, 148

W

water microdroplets, 83
wood, 34, 35 36

X

X-ray diffraction (XRD) patterns, 142

Y

Young's modulus, 68

Z

zeolite, 34, 35, 36
zinc oxide (ZnO), 51
zirconia, 50, 51
