

Index

A

ABA. *See* Abscisic acid
ABC transporter, 136
Abiotic stress, 257
Abscisic acid (ABA), 22–23, 30, 31, 37–38, 131, 135
Acid phosphatase, 178, 182, 186, 188
Adenosine 5'-phosphosulfate (APS), 251–252
AKT1, 39
Aldehyde oxidase (AO), 131–133
Algae, 245
Allosteric regulation, 158
Alternative oxidase (AOX), 57
Amine oxidases, 59
Amino acid, 152, 155
Ammonium, 150–151
 assimilation, 153–154
 fluxes, 150–151
Apoplast, 8, 284, 286, 289, 290
APS kinase, 253
APS sulfo-transferase, 252
Arabidopsis, 177, 178, 182–185, 187–191
Arabidopsis thaliana, 1, 12–17, 246
Archaea, 283
Ascorbate oxidases, 58
ATPases, 32–33, 39, 176
 autoinhibited, 32–33
 ER type, 32
Auxin, 186, 189–191

B

Bacteria, 283, 287
B deficiency, 2, 3, 6, 8, 10
B efflux, 9–10
BHLH32, 184, 185
Biofortification, 290, 292
BOR1, 1, 8–11
BOR4, 1, 10
Boric acid B(OH)₃, 1–4, 6–8, 11
Boron, 1–11
BORs, 1, 10
BOT1, 10
B-polysaccharide complex, 4
Brassica napus, 249
B toxicity, 3, 10, 11

C

Cadmium, 289
cADPR. *See* Cyclic adenosine diphospho-ribose
Calcineurin-B like proteins (CBL), 25, 35, 37–39
Calcium dependent protein kinases, 32, 35–37, 39
Calcium exchanger, 31–32
Calcium ion
 coordination number, 20
 ionic radius, 20
Calcium nutrition
 deficiency, 18–19
 uptake, 18
Calcium signalling
 abiotic stimuli, 21

antiporter, 31–32
 biotic factors, 21
 channels, 19, 23, 25–30, 33, 37, 39
 oscillation, 22–23, 26, 34, 37
 pumps, 20, 31, 33
 Calmodulin (CaM), 29, 32, 35–36
 Calmodulin like (CML), 35–36
 CaM. *See* Calmodulin
 Camalexin, 244
 Catalysis, 284
 CAX. *See* Calcium exchanger
 CAX transporter, 101–103
 CBL. *See* Calcineurin-B like proteins (CBL)
 CBL interacting protein kinases (CIPK), 25, 38–39
 CCX transporter, 102
 CDF transporter, 103
 CDPK. *See* Calcium dependent protein kinases
 Cell wall, 19, 34, 35
 Channel, 1, 6–9, 11
 Chelation strategy, 78–80, 82–83
Chlamydomonas reinhardtii, 248
 Chloroplasts, 24–25, 27–28, 33, 76, 83, 86–88
 Chloroplasts, 76, 83, 86–88
 CIPK. *See* CBL interacting protein kinases (CIPK)
 Citrate
 FRD3, 77, 83, 84
 CML. *See* Calmodulin like
 CNGC. *See* Cyclic nucleotide gated channels (CNGC)
 Copper (Cu), 55, 126–127
 Copper response regulator (CRR1), 66
 COPT-family transporter, 59
 Crop productivity, 175, 191
 Cu chaperone, 60
 Cu deficiency, 66
 Cu excess, 62
 Cu-proteins, 56
 Cu transporters, 56
 Cu/Zn superoxide dismutase (Cu/ZnSOD), 57, 68
 Cyanide, 259
 Cyclic adenosine diphospho ribose, 23, 30–31

Cyclic nucleotide gated channels (CNGC), 23, 29–30
 Cysteine, 246
 Cysteine desulfurases, 259
 Cysteine synthase complex (CSC), 256
 Cysteine synthesis, 246
 Cytochrome *c6*, 66
 Cytochrome *c* oxidase (COX), 56
 Cytokinin, 189, 190
 Cytosol (or cytoplasm), 199, 203, 208

D

Defensin, 244
 Digalatosylldiacylglycerol (DGDG), 179
 DNA, 283, 284

E

ECA1, 106
 ECA3, 104–106
 Ecological aspects, 225, 234–237
 Ecosystems, 174, 175, 191
 EF hand, 31, 35–38
 Endocytosis, 6, 9
 Endoplasmic reticulum, 22, 24–28, 30–32, 36
 Endosomes, 24–25, 32
 Environmental, 173, 175–176, 183, 188–190
 Enzyme-activation, 199, 217
 ER. *See* Endoplasmic reticulum
 Ethylene, 189–191, 262
 Ethylene receptors, 57
 Evolution, 282, 283, 292

F

Fe deficiency, 285, 291
 Fenton reaction, 283
 Ferredoxin, 253
 Ferric reductases, 60, 65
 Ferroxidases, 58
 Fertilizers, 175, 191
 FeSOD regulation, 67
 FIT, 80–82
 Flavin adenine dinucleotide (FAD), 130, 133

FRO2, 77, 78, 80–82, 86
 Fucose, 4–5

G

GA. *See* Giberellic acid
 Galactolipid, 179
 γ -glutamylcysteine ligase (GSH1), 244
 Giberellic acid, 22, 31, 37
 GLR. *See* Glutamate receptors (GLR)
 Glucosinolates, 244
 Glutamate, 20, 23
 receptors, 29–30
 Glutamate dehydrogenase, 154
 Glutamate receptors (GLR), 29, 30
 Glutamine synthetase, 153, 154
 Glutathione, 246, 284, 288, 291
 Golgi, 24–25, 32
 Green fluorescent protein, 264
 Growth, 174, 175, 181, 182, 184,
 186, 189–191
 GSH, 244
 GSH conjugates, 266
 Guard cell, 22, 37
 GUT1, 5

H

Heavy Metal Associated (HMA)
 transporter family, 62
 Heme, 132
 Hormones, 22, 31, 36
 Hyperaccumulation, 291, 292

I

Indole-3-acetic acid (IAA), 131
 Inositol-3-phosphate, 23, 26, 29–31
 InsP3. *See* Inositol-3-phosphate
 IPS1, 187
 Iron, 244
 Iron (Fe), 135
 Iron-sulfur clusters, 130, 135, 244
 IRT1, 77, 78, 80–82, 86, 100
 Irving-Williams series, 282

K

K⁺. *See* Potassium

L

Laccases, 58
 Lateral root (LR), 181, 182, 186, 189, 190
 Ligand gated channels, 25, 29–31
 Light, 21, 27–28, 30, 36
Low phosphate root (lpr), 184
Low phosphorus insensitive (lpi), 184
 Lsi1, 9
 Lsi2, 9

M

Macronutrient, 174
 Manganese (Mn), 95
 Manganese chaperones, 109
 Manganese deficiency, 96–101, 103,
 105–107, 112
 Manganese detoxification, 99–108, 111
 Manganese imaging, 101
 Manganese regulation, 110
 Manganese sequestration, 102, 103
 Manganese-superoxide dismutase
 (MnSOD), 96, 98, 108–110
 Manganese toxicity, 99, 101, 105,
 106, 111
 Manganese uptake, 100, 107
 Manganese xylem transport, 107
 Mannitol, 24–25, 33–34
Marchantia polymorpha, 248
 Metabolism, 174, 178–180, 189
 Metallo-chaperones, 56
 Metallothionein (MT), 62
 Methionine, 249
 microRNAs, 66
 miR399, 184, 187
 miRNAs, 254
 Mitochondria, 17, 24–25, 27, 83,
 87–88, 132–135, 257
 Mitochondrial amidoxime reducing
 component (mARC), 132
 Mn deficiency, 291
 Molybdate, 248
 Molybdenum (Mo), 120
 enzymes, 129–136
 insertion, 126–127
 uptake, 121
 Molybdenum cofactor (Moco), 121–127
 binding protein, 128
 biosynthesis, 124–127

cytoskeleton binding, 128
 storage, 127–128
 Molybdenum cofactor synthesis, 59
 Molybdopterin (MPT), 123, 124
 Molybdopterin synthase, 125
 Monogalatosyldiacylglycerol (MGDG),
 179
 MTP11, 103
 Multi-copper oxidases (MCO), 58
MURI, 4–5

N

NADH oxidase, 130
 Na⁺. *See* Salt
 N₂ fixation, 2
 Nicotianamine (NA), 61, 65, 76,
 77, 79, 84–85, 262, 288, 293
 NIP5;1, 1, 7, 8, 11
 NIP6;1, 1, 7
 NIPs, 1, 7
 Nitrate, 148–150, 258
 channels, 150
 efflux, 149
 high-affinity, 149
 low-affinity, 149
 reduction, 153
 uptake, 148
 vacuole, 149
 Nitrate metabolism, 245
 Nitrate reductase (NR), 132–133, 153
 Nitric oxide (NO), 26, 35, 133, 158
 formation, 159–161
 targets, 161–163
 Nitrite, 148–150
 chloroplast, 150
 transport, 150
 Nitrite reductase, 153, 253
 Nitrogen, 145
 assimilation, 153–154
 deprivation, 155
 distribution, 146–148
 flux, 148–152
 regulation, 154–158
 remobilization, 154
 Nitrogenase, 123
 Nitrosylation, 161
 NO. *See* Nitric oxide (NO)

Nod factor, 25–26, 34
 NRAMP transporter, 103, 107
 Nucleic acids, 179
 Nucleus, 22, 25–26

O

O-acetyleserine(thiol)lyase, 256
 OPT transporter, 107
 Organic acids, 178, 179, 182
 Osmoticum (or Osmotica), 200, 201,
 203, 217, 218

P

PAPS reductase, 252
 Passive diffusion, 6
 Pathogen, 21, 30, 35, 37
 Pathogen defence, 244
 Pectic polysaccharide, 1
 Peroxisome, 130
 Phloem, 247
 PHO regulon, 188
 Phosphatases, 178, 180, 182, 186, 188
 Phosphate
 transporters (Pht), 180
 uptake, 174–178, 181–183, 189, 191
 Phosphate 1 (PHO1), 177
 Phosphate 2 (PHO2), 177, 184,
 186–188
Phosphate deficiency response 2, 184
 3'-Phosphoadenosyl-5'-phosphosulfate
 (PAPS), 252
 Phospholipid, 174, 177–179, 190
 Phosphorous (P)
 acquisition, 178, 186, 189, 191
 availability, 174–176, 178, 179,
 189, 191
 homeostasis, 174, 186–188
 paradox, 174–176
 in soil, 175, 176, 179, 182
 translocation, 176–177, 180, 184, 187
 Phosphorylation, 157
 Photosynthesis, 156, 174, 180
 Photosystem II (PSII), 96, 108,
 110, 112
 Phototrophic, 244
 PHR1, 178, 183–191
Physcomitrella patens, 253

Phytochelatins, 62, 288, 289
 Phytochelatin synthase, 266
 Phycocyanins, 57
 Plasmalemma, 246
 Plasma membrane, 19, 23–25, 28–29, 36,
 38–39, 200, 201, 203–207, 209–211,
 215, 216
 Plastids, 257
 Plastocyanin, 56
 PLDZ, 179, 186
 Pollen tube, 22, 33, 37
 Polyphenol oxidase (PPO), 58
 Potassium, 19, 24–25, 29, 31, 39
 Potassium-deficiency symptoms,
 201–203, 206, 217
 Proteome, 281
 PSR1, 185
 P-type ATPase, 104–106

R

Reactive oxygen species (ROS), 130,
 133, 244
 Redox, 243
 Reduction strategy, 77–78, 80–82
 Regulation, 154
 post-transcriptional, 157
 transcriptional, 155
 Regulators, 156, 158
 Rhamnogalacturonan-II (RG-II), 1,
 3–6, 11
 Rhizosphere, 178
 Ribosomes, 284
 roGFP, 264
 Root, 247
 architecture, 181, 182, 184, 189, 191
 hair (HR), 181, 191
 meristem, 176, 181, 184

S

Saccharomyces cerevisiae, 120, 252
 S-adenosylmethionine (SAM), 261
 Salt, 19, 21, 25–26, 33–34, 37–39
 Secondary sulfur compounds, 251
 Second messengers, 23
 Secretory pathway, 64
 Seed loading, 106–108
 Seed storage protein, 246

Selenium

accumulation, 229–237
 metabolism, 225–238
 tolerance, 230–233, 236, 237
 volatilization, 230–235, 237
 Senescence, 285, 290
 Serine acetyltransferase, 257
 Signaling, 283
 SIZ1, 185
 Slow vacuolar channel, 30–31
 S-methylmethionine (SMM), 249, 262
 S-nitrosylation, 262
 Sodium. *See* Salt
 Soil, 285, 286, 292
 SPL7, 67
 SPL family, 67
 SPX domain, 187, 188
 Stomata
 closure, 22–23, 28, 37
 opening, 22
 response, 21–22, 37, 39
 Stomata (or guard cell), 201, 203,
 210, 216, 217
 Sucrose, 180, 188, 189
 Sulfate, 245
 Sulfate deprivation, 245
 Sulfate permeases, 248
 Sulfate transport, 246
 Sulfate transporters, 246
 Sulfide, 259
 Sulfite oxidase (SO), 132
 Sulfite reductase, 252
 Sulfolipids, 179, 251
 Sulfur, 244
 Sulfuration, 134–135
 Sulfur-enhanced defence, 244
 Sulfur starvation, 247
 Sulphoquinovosyldiacylglycerol
 (SQDG), 179
Sultr, 246
 Symbiosis, 286
 Symplastic pathway, 176

T

Target mimicry, 184, 187
 Thionin, 244
 Thioredoxin, 252

Tonoplast, 200, 205, 206, 215, 217
 Trace element, 121
 Transcription factor, 184, 185, 188, 254
 Transgenic approaches, 230–231
 Transnitrosation, 162
 Transpiration, 201, 203, 206, 210, 217
 Transport, 1–11
 Transporter (or Transport protein)
 CNGC (cyclic nucleotide gated channel), 200, 216
 CPA (cation/proton-antiporter), 200, 205–207, 211, 217
 GLR (glutamate receptor), 216
 HKT/Trk, 216
 K⁺ channel (KIRC, KORC, shaker), 200, 201, 203–205, 207, 208, 210, 211, 216
 KEA, 200
 K⁺/H⁺-antiporter, 205–207
 K⁺/H⁺-symporter, 200, 205, 207–209, 211, 216
 kir-like, 200, 217
 KT/KUP/HAK (K⁺ uptake permease), 211
 slowly-activating vacuolar channel (SV channel), 200, 211
 TPC1, 200, 217
 TPK/KCO (tandem pore K⁺ channel), 216, 217
 VICC (voltage-independent cation channel), 200, 209–211, 216, 217

U

Urea, 151–152

V

Vacuole, 24–25, 30, 32, 33, 35, 38, 85–86, 200, 201, 205, 207, 208, 211, 217, 284, 288, 290, 291
 VIT1 transporter, 98, 108
 Voltage dependent channels, 25, 28–31

W

WRKY75, 184–186

X

Xanthine dehydrogenase (XDH), 130, 133
 Xanthine oxidase (XO), 134–135
 Xenobiotics, 265
 Xylem, 176, 177, 184, 248, 288–290, 292
 Xylem loading, 8

Y

Yellow stripe like (YSL), 84
 Yellow Stripe-Like (YSL) transporters, 65, 107
 YNL275w, 11

Z

ZAT6, 184–186
 ZIP family transporters, 60
 ZIP transporter, 98, 100
 Zn chemistry, 281
 Zn deficiency, 284, 285, 287–292
 Zn toxicity, 285, 291, 292
