

Index

A

N-Acetylgalactosamine (NAG), 235
Adeno-associated viruses (AAV), 2, 274
Adenoviruses, 2, 274
Alkyl acyl carnitine esters, 81
Aminoethyl piperazine (AEPZ), 114
Aminoglycerol–diamine, 64
Aminomethyl piperidine (AMP), 116
Antibodies, 275
Apolipoprotein B (apoB), 181
Asialofetuin, 146, 176
Asialoglycoprotein receptor (ASGPr), 146, 156, 176, 230
Aureobasidium pullulans, 145

B

Ballistic particle delivery, 4
BGTC, 19, 21
Biodegradation, programmed, 235
Bioresponsivity, 227
Bis-(methylol)propionic acid
 (bis-MPA), 118
Bleomycin, 276
1,4-Butanediol diacrylate (BDDA), 116

C

Calcium phosphate method, 5
Capsid proteins, 3
Carbohydrates, 131
Cationic liposome (CL)–DNA, 193
Cationic polymers, 227
Cell death, disruption of lysosomes, 260

Cell delivery, 15, 17
Cell targeting, 229
Cell-penetrating peptides (CPP), 269
Chemical programming, 227
Chitin, 149
Chitosan, 131, 135, 148
 thiolated, 155
 urocanic acid-modified, 154
Chitosan/DNA polyplexes, 152
Chitosan-*g*-PEI, 149, 153
Chloramphenicol acetyl transferase
 (CAT), 58
Cholesterol, 80, 191
 analogs, 201
 encapsulated, 146
Cholesterylhemisuccinate, 8
Cholesteryloxycarbonyl chloride, 19
Conformational flexibility, 60
Cyclodextrins, 131, 135, 168
Cytochrome *c*, 259
Cytotoxicity profile, 95

D

DEAE-dextran, 9
DEAE-dextran-*g*-methyl methacrylate
 (DDMC), 135
DEAE-pullulan, 147
Dendrigrafts, 100
Dendrimers, 15, 17, 18, 30, 100, 205
 peptide/polypeptide, 41
 poly(L-lysine), 37
 polyamidoamine (PAMAM), 10, 34, 95
 polyamidourea, 42

- polyaminophosphine, 37
solid-phase synthesis, 38
- Dendrons, 100
- Dextran, 131, 135
nanoparticles, 137
- Dextranases, 135
- Dialkyne-oligoethylenamines, 166
- 2-Diethylaminoethyl (DEAE)-dextran, 135
- Diethylaminopropylamine (DEAPA), 118
- Diethylene triamine pentaacetic acid, 146
- 1,5-Dihexadecyl-*N*-lysyl-*N*-heptyl-L-glutamate, 60
- Dihydropyridine, 64
- Dimethylaminodipropylene-triamine (DMDPTA), 113
- Dimethylaminopropane (DMA), 66
- Dimethylethylenediamine-carbamoyl cholesterol (DC-chol), 7, 19
- 1,2-Dimyristoleoyl-*sn*-glycero-3-ethylphosphocholine, 54
- Diocadecyl amido glycil spermine (DOGS), 7, 19
- 1,2-Dioleoyl-3-trimethylammonium propane (DOTAP), 7, 196
- 2,3-Dioleoyloxy-*N*-(2-(sperminocarboxamido) ethyl)-dimethyl-1-propanaminium (DOSPA), 7
- Dioleoylphosphatidylcholine (DOPC), 80, 196
- Dioleoylphosphatidylethanolamine (DOPE), 56, 80, 196
- 1,2-Dioleoyl-*sn*-glycero-3-ethylphosphocholine, 54
- Dioleoyloxypropyl-trimethylammonium chloride (DOTMA), 7, 18
- Dipalmitoleoyl phosphatidylethanolamine (DPoPE), 78
- Disaccharides, 164
- Disulfide bonds, reducible, 238
- Dithiothreitol (DTT), 113
- DNA, 131, 227
complexation, polycation-mediated, 135
delivery, laser-beam-mediated, 5
non-viral carriers, 18
rectangular superlattice, 72
vaccination, 5
- DNA/dendrimer, 102
- DNA/histone complex, 101
- DNA/RNA transfection, 283
- DORIE, 56
- DOTAP/Chol, 136
- DOTMA, 7, 18
- Drug delivery, 251
- E**
- EDLPC/EDOPC, 83
- EDMoPC, 54
- EDOPC, 54
DNA lipoplexes, 71
- Electroporation, 4, 11, 135, 269, 271
- Endosomal escape, pH-triggered, 234
- Endosomal integrity, 17
- Endosomal pathway, 293
- Endosomal release, gene carriers, 296
- Endosomolytic agents, activation, 233
- Enhanced permeability and retention (EPR), 219, 229, 276
- 1-Ethyl-3-(3-dimethyl amino)propyl carbodiimide (EDC), 144
- Eukaryotic cells, 2
- F**
- Fluorescence wide-field microscopy, 283
- Folate, 108
- G**
- β -Galactosidase, 8, 59, 66, 82, 110, 136, 145, 156, 271
- Gel phase lipoplexes, 72
- Gel-liquid crystalline transition, 72
- Gene carriers, 283
- Gene delivery, 1, 82, 95, 191
PCI-based, 270
polymers, degradation, 108
- Gene therapy, 15, 251, 283
- Gene transfection, mechanism, 99
- Glucaroamidoamine, 162
- Guanidinylation, 22
- H**
- Heparan sulfate proteoglycans (HSPGs), 290
- Herpes simplex virus, 2

Hexachlorocyclotriphosphazene, 37
1,6-Hexanediol diacrylate (HDDA), 116
Hexyl pyropheophorbide, 255
HMW-PEI, 106
HPAMAM-PHE/DNA, 112
Hyaluronan, 131, 135, 143
Hydration repulsion, 203
Hydroxyethyl ethylene imine (HEEI), 107

I

Immune response, 2
Immunoliposomes, 9
Immunotoxins (ITs), 275
Intracellular movement, 292

L

L1/L2 proteins, 3
Lactobionic acid, 156
Laser-beam-mediated DNA delivery, 5
Lentiviruses, 2
Leuconostoc mesenteroides, 135
Linkers, 58
Lipid/DNA lipoplex, 67
Lipids, cationic, 15, 18, 51
 multivalent, 191
 hydration, 60
Lipitoids, 25
Lipophosphoramidates, 20
Lipoplexes, 17, 51, 69, 137, 271
 cationic, 6, 17
 nucleic acid release, 74
 phase structures, 72
 size/surface charge, 71
Liposomes, 6, 135
 pH-sensitive, 8
Listeriolysin O (LLO), 235
LMW-PEI, 106
Luciferase, 60, 67, 171, 214, 231, 272
 reporter plasmids, 8
 silencing, 240
Lysosomes, 17, 99, 139, 228, 257, 298
 disruption, 260

M

Macromolecules, 251
Mammalian cells, 1

Melittin, 233
Membranes, barrier, 252
 charge density, 196
 permeability, 5, 252
Microinjection, 3
Multicomponent carriers, transfection, 79
Multilamellar vesicles (MLVs), 6
Multivalent lipids (MVLs), 196, 212

N

Neutral lipids (NLs), 214
Nucleic acids, 1ff
 delivery, 1, 131
 non-viral delivery, 3
 peptide, 251

O

Oleic acid, 8
Oocytes, 4

P

Particle bombardment, 4
Parvoviruses, 2
PEG-HZN-NHS, 232
PEG-lipid conjugates, 82
PEG-PEI/DNA polyplexes, 108
PEGylated glycopeptides (PGPs), 178
PEI/DNA, 106, 298
Pentaethylenehexamine, 159
Peptide nucleic acids (PNAs), 251,
 252, 269
Peptide/peptoid dendrimers, 41
PG-PEHA, 122
Phase transitions, 51
Phosphatidylcholine (PC), 53
Phospholipid bilayer, 6
Phosphonolipids, 20, 21
Photochemical internalization (PCI), 241,
 252, 262
Photodynamic therapy (PDT), 251, 253
Photofrin, 255
Photosensitizers, 251, 254
Plant cell walls, 4
Plasmids, 2
Polyamidine-CD, 169
Polyamidourea dendrimers, 42

- Polyamines, 22, 28, 99
 hyperbranched, 95, 105
 Polyamino esters (PAE), 236
 Polyaminophosphine dendrimers, 37
 Polycaprolactone (PCL), 118
 Polyethylenimines (PEIs), 9, 85
 Polyglycerolamines, 95
 hyperbranched, 124
 Polyglycerols, dendritic, 120
 Poly-*N*-isopropylacrylamide (PNIPAM), 240
 Poly-L-lysine, 9, 37, 85, 131, 134, 159, 229, 272
 Polymers dendrimers, 17
 Polypeptide dendrimers, 41
 Polyplexes, 229, 271
 shielding, 231
 Polypropylenimine (PPI), 32, 229
 Polysaccharides, 131, 134
 Poly(amido amine) (PAMAM), 134, 229, 238, 273
 dendrimers, 10, 34, 95, 101
 hyperbranched, 109
 Poly(α -(4-aminobutyl)-L-glycolic acid), 236
 Poly(amido ester)s, 95
 hyperbranched, biodegradable, 114
 Poly(ethylene glycol) (PEG), 36, 82, 107, 136, 229, 272
 Poly(ethylene imine), 95, 104, 134, 159, 229, 271
 hyperbranched, 106
 Poly(glycoamidoamine)s (PGAAs), 159
 Poly(4-hydroxy-L-proline) (PHP), 236
 Poly(L-lactide-*co*-L-lysine), 236
 Poly(TETA/CBA), 239
 Poly(vinyl ether) composed of butyl and amino vinyl ethers (PBAVE), 234
 Porphyrins, 241, 254
 Protamine sulfate, 85
 Protein toxins, 251
 Proton sponge, 35, 99, 271
 Pullulan, 131, 135, 145
 1*H*-Pyrazole-1-carboxamide, 22
- R**
- Reducible hyperbranched poly(amido amine)s (RHB), 113
 Retroviruses, 2
- Reversible shielding, 230
 Ribosome-inactivation protein (RIPs), toxins, 275
 RNA, siRNA 2, 191, 227, 251
 RNA interference (RNAi), 212, 228, 232
- S**
- Saccharide copolymers, 158
 SAINT (Synthetic Amphiphile INTERaction), 65
 Schizophyllan, 131, 135, 138
 Shielding, 231
 Silencing, 52, 67, 98, 191
 Silencing efficiency (SE), 122, 191, 212
 Single-particle tracking, 283, 286
 Single-walled carbon nanotubes (SWNTs), 4
 siRNA, 2, 67, 191, 212, 227, 251
 Small angle X-ray scattering (SAXS), 191
 Small unilamellar vesicles (SUVs), 6
 Spermidine, 135
 Spermine, 134, 135, 146
 Stealth liposomes, 82
 Steroidyloxycarbonyl halide, 19
Streptococcus mutans, 135
 Structure-property dependence, 95
- T**
- Targeting, 9, 102, 229
 carbohydrate-mediated, 134
 multi-purpose, 125
 specificity, 134, 153, 158, 277
 Tartaroamidoamine, 162
 Tetra-3-hydroxyphenylporphin, 257
 Tetraphenylporphyrin, 259
 Tetrapyrroles, 254
 Thermosensitive polymers, 240
 Thrombus, 260
 α -Tocopheryl PEG-succinate (TPGS), 82
 Trajectory analysis, 283
 Transfection, 5, 15, 18, 51, 131
 activity relationships, 55
 efficiency, 95
 photochemically enhanced, 241
 vectors, 15
 Trastuzumab-saporin, 264
 Trehalose, 164

Trimethylammoniumpropane (TAP), 81
Trimethylol-propane triacrylate
(TMPTA), 114

U

Univalent lipids (UVLs), 217

V

Vascular damage, 260
Vasoconstriction, 260
Viral vectors, 133, 191, 271
Viruses, recombinant, 2
Virus-like particles (VLPs), 3
Vitamins, encapsulated, 146
