

Index *Trypanosoma brucei*

- amino acid sequence of VSG 27, 33, 61
 - conservation of 32
- antibodies, role in trypanosome clearance 120
- carbohydrate composition of VSG 64
- cell surface oligosaccharides *Crithidia* 31
- control of infection 94
- Crithidia*, oligosaccharides 31
- cross-reacting determinant (CRD) on VSG 34, 67
- differentiation, slender, intermediate, stumpy forms 94, 106
 - in vitro analysis 106
 - independence of immune response 103
 - differential gene expression 9
- division rates 94, 97
- dolichol independent pathway, in synthesis of VSG 39
- dolichol pathway, in synthesis of VSG 28, 39, 58
- glycosyl transferases, and VSG 39
 - tunicamycin inhibition 39
- glycosylation of VSG
 - C terminal 34, 66
 - N terminal 59
- growth in vitro 106
 - serum components 109
- high-density lipoprotein 94
- host range 94
- hydrophobic tail on VSG 33
- Ia expression 122
- immune response and parasitaemia 97, 110
 - in host protection 101, 110, 119
 - in regulation of parasitaemia 93f
 - prophylaxis 119
 - stimulation of 102
- immunodepression and infection 111
- immunological cross reactivity of VSG 34, 67
- immunoprophylaxis, against *T. brucei* 110
- immunosuppression in African trypanosomiasis 119f
- in vitro growth 106
 - serum components 109
- infection, control of 94
- interferon in *T. brucei* infection 122, 123
- interleukin-1 122
- macrophages in *T. brucei* infection 120
 - Fc and C3 receptors 121
 - ingestion and digestion of parasites 120
 - mediator release 121
 - phenotype change 121
 - role in immunosuppression 119f
- membrane form, variant surface glycoprotein mf VSG 34, 40
 - purification of 43
- mitogens, lack of in *T. brucei* 123
- monomorphic trypanosomes 101
- morphological pleomorphism 95, 99
 - selection of slender forms 101
- oligosaccharides of VSG 24, 27, 34, 58
- parasitaemia
 - bystander antibodies 101
 - immunodepression 111
 - inhibition of antibody secretion 111
 - in X irradiated host 96
 - polyclonal activation 101
 - protection by immune response 101, 110
 - regulation of 93f
 - regulation of and immunity 97
 - stumpy forms in 96
- phosphorylation of VSG 42, 67
- pleomorphic trypanosomes 95, 99
- polyclonal activation
 - B-cell 122
 - T-cell 122
 - by infection 101
- polymorphism, morphological, see pleomorphism
- prostaglandins 110, 122
- purification mfVSG and sVSG 43
- regulation of parasitaemia 93f

- sequence conservation in VSG 32
- signal peptides of VSG 26, 32
- slender parasite form 94
 - in vitro differentiation 106
- soluble form, variant surface glycoprotein
 - sVSG 34, 48
 - purification of 43
- stumpy parasite form 94
 - in vitro differentiation 106
- surface coat, multilayered, nature of 35
- surface coat, see also variant surface glycoprotein
- taxonomy 93
- 35mer sequences and VSG genes 25
- transcription of VSG genes
- translation of VSG mRNA
- trypanotolerance 119
- tunicamycin, effect on VSG 29, 38, 39, 59

- vaccination against *T. brucei* 119
- variant surface glycoprotein 23f, 57f
 - amino acid sequence 27, 33, 60
 - antibodies to 100, 105, 110
 - app. molecular weight after isolation 40
 - biosynthesis, diagrammatic 70
 - class I 60
 - class II 60
 - class III 63
 - cross-reacting determinant 34, 67
 - dolichol independent pathway 39
 - dolichol pathway in synthesis 28, 39, 58
 - effect of tunicamycin 29, 38, 39, 59
 - enzyme mediated release 32, 38
 - fatty acid composition 43
 - genes 25
 - glycosylation 24, 39, 59
 - glycosylation site heterogeneity 71
 - glycosyltransferases 39, 58
 - tunicamycin inhibition 39
 - heterogeneity in glycosylation sites 71
 - hydrophobic tail 32
 - amino acid sequence 33, 61
 - enzyme mediated release 32
 - hydrophilic processing 33
 - immunological cross-reactivity 34, 67
 - membrane form 34, 40
 - n-glycosylation 59
 - n-terminal signal peptides 26, 32
 - o-glycosylation 59
 - oligosaccharides 27, 34
 - oligosaccharide structure 27, 58
 - phosphate content 42
 - phosphorylation of 42, 67
 - post translational glycosylation 29
 - post translational modification 25, 28
 - purification of mfVSG and sVSG 43
 - sequence conservation 32
 - signal peptide 26, 32
 - solubilisation by enzyme X 48, 70
 - soluble form 34, 48
 - specific immunity to 100, 105, 110
 - sugar composition 64
 - surface coat 23
 - 35mer 25
 - virulence 119

Index *Trypanosoma cruzi*

- adhesion to host cells 137
- adhesion and penetration dissociated 137
- ADP-ribosyl transferase 3
- affinity chromatography
 - lectin 82, 142
 - monoclonal antibody 84
- amastigote, extracellular development 15
- amastigote, in life cycle 130
- animal models of Chagas' disease
 - dog 169
 - mouse 170, 172
 - rabbit 170
- antigenic differences, stage specific,
 - Leishmania* 6
- anti-phagocytic factor 135
- autoimmunity, in Chagas' disease 161, 169
 - anti-DNA antibodies 173
 - relevance to immunoprophylaxis 82
- benzamide derivatives 7
 - effect on *Leishmania* 7, 8
 - effect on *T. cruzi* 14
 - 3-amino 14
 - 3-methoxy 17
- C3 and Fc receptors, parasite interiorisation 133, 154
- carbohydrate coat 77, 140
- cardiac pathology in Chagas' disease 160, 169, 171
- cell cycle and interaction with *T. cruzi* 137
- cell surface glycoproteins, see glycoproteins
- cell surface membrane 10, 75f, 131
 - carbohydrate 154
 - neuraminidase 159
 - purification 77
 - role in host cell interaction 129f
 - structure
- Chagas' disease 145, 167f
 - acute 168, 171
 - animal models of,
 - dog 169
 - mouse 170, 172
 - rabbit 170
 - autoimmunity in 169
 - autoimmunity 82, 161, 167f
 - chronic 168, 171
 - indeterminate 168
 - mechanisms of pathogenesis
 - cross reactivity 169
 - host cell modification 170
 - parasite mediated 168
 - pathogenesis 167
 - pathology, description of 168
 - potential for immunoregulation 175
- chemotherapy, potential targets 1f, 86
- Con A binding 131, 133, 141
- continuous flow cultivation of epimastigotes 11
- cross reactive antigens, Chagas' disease 82
- cyclic AMP phosphodiesterase 7
- differentiation
 - DNA selective destruction in 2
 - gene amplification in 3
 - in eukaryotes 2
 - inhibition by monoclonal antibody 84
 - in insect vector 11
 - in *Leishmania* 5
 - in *T. cruzi* 1f
 - in *Trypanosoma* 8
 - reproduced in insect culture media 12
 - signals for 5
- digestive pathology, Chagas' disease 160, 169, 171
- DNA selective destruction in differentiation 2
- DNA supercoiling 4
- Fc and C3 receptors, parasite interiorisation 133
- electron microscope studies 131
- epimastigote, in life cycle 130
- erythrocyte glycoporphins 154
- eukaryotic gene expression 3
- gastrointestinal pathology in Chagas' disease 160
- gene amplification in differentiation 3
- gene regulation 2
 - post transcriptional 4

- glycoconjugates 78
- glycophorins on erythrocytes 154
- glycoproteins
 - cell surface 140, 142
 - glycosylation 77, 86
 - in host cell interaction 140, 153f
 - GP 25 79, 87
 - composition 81, 87
 - GP 72 84, 143
 - composition 81, 84, 143
 - role in differentiation 84
 - GP 85 143
 - GP 90 82, 135, 143, 158
 - anti-phagocytic factor 135
 - composition 81, 87
 - neuraminidase activity, possible 135
 - role in infection 142
- growth requirements 12

- host cell interaction, with *T. cruzi* 129f
 - cell cycle dependence 137
 - inhibition with tunicamycin 143
- host-parasite interactions 154

- immune affinity chromatography 84
- immunological protection 142
 - problems of 88
- immunological resistance 171, 175
- immunoprecipitation studies 144
- immunoprophylaxis 82, 85, 88
- in vitro culture 11
 - amastigotes 14
 - epimastigotes, continuous flow 11
 - trypomastigotes 139
- influenza virus and neuraminidase 155
- interaction with host cells 154, 159
 - cell cycle dependence 137
 - inhibition by tunicamycin 143
- invasion of host cells 129f
 - cell cycle dependence 137
 - dependence on protein synthesis 139
 - dissociation of adhesion and penetration 137
 - of non-professional phagocytes 136
 - of professional phagocytes 132
 - role of host cell surface 137
 - role of neuraminidase 159
 - strain variation 134

- lectin affinity chromatography 82, 142
- lectin, on *T. cruzi* 162
- lectins, interaction with *T. cruzi* 10, 13, 140
- life cycle, *T. cruzi* 9, 76, 130, 168
 - stages of
 - amastigote 130
 - epimastigote 130
 - spheromastigote 139
 - staphylomastigote 12
 - trypomastigote 130
 - lipopeptidophosphoglycan 78, 131

- macrophages, interaction with *T. cruzi* 132, 134
- methoxybenzamide 17
- monoclonal antibodies 78, 169

- natural killer cells 161
- neuraminidase
 - and developmental regulation 11
 - assay for 158
 - influenza 156
 - in host cell invasion 153f
 - roles in eukaryotic cells 157
 - three dimensional structure 156
- nicotinamide, 5-methyl 14, 17
- non-professional phagocytes, interaction with *T. cruzi* 136

- parasitaemia 13, 168
 - induction of thrombocytopenia 159
- pathogenesis of Chagas' disease
 - autoimmunity, potential for 82, 169
 - cross reactive antigens 82, 169
 - host cell modification 170
 - parasite effects in 168, 171
- pathology of Chagas' disease 168
- peanut agglutinin 158
 - assay for neuraminidase 158
- penetration and adhesion dissociated 137
- PHA, interaction with *T. cruzi* 141
- polymorphism of parasite strains 9, 135, 154
- post-transcriptional gene regulation 4
- professional phagocytes, interaction with *T. cruzi* 132
- proteases, in trypanosomes 147
- protection, immunological 82, 142, 175
- protective antigen 82, 175
- protein synthesis, requirement for host cell invasion 139

- receptors for macrophage interaction 133
- red cell glycophorins 154

- schizodemes 132
- soya bean agglutinin 142
- spheromastigotes, in life cycle 139
- strain variation, in *T. cruzi* 132, 134, 154
- strain dependent temperature sensitivity 14
- surface labelling
 - galactose oxidase 77
 - iodination, iodogen 77
 - iodination, lactoperoxidase 77

- temperature sensitivity, strain dependence 14
- thrombocytopenia induced by *T. cruzi* infection 159
- transcriptional control 3
- trypomastigote, in life cycle 130
- tunicamycin, effects of on trypomastigotes 143
- 2 dimensional electrophoresis of *T. cruzi* 145
- ultrastructure, of life cycle stages 131
- wheatgerm agglutinin 141
- zymbodeme 132
