

Subject Index

- AC field 246
- Acer pseudoplatanus* 462
- acridine orange 488
- acrocentric chromosome 349
- actopine 209
- Aegilops umbellulata* 34
- agarose 180
- Agrobacterium rhizogenes* 5, 79, 136, 170, 209
- A. tumefaciens* 5, 56, 107, 157, 173, 208, 237, 325, 378, 399, 407, 428
- Agroinfection 211
- agropine 77, 209
- albino protoplasts 11, 429
- alcohol dehydrogenase 82
- alfalfa 86
- Allium cepa* 449
- allopolyploids 40
- Alternaria* 136
- amphidiploids 197
- amplification 38
- antibiotics 209, 433
- aphidicolin 348
- apomictic 47
- Arabidobrassica* 2, 204
- Arabidopsis* 197
- Asparagus officinalis* 90
- Aspergillus nidulans* 12, 408
- asymmetric fusion 35
- ATPase 465
- autofluorescence 311
- autoradiogram 226
- autoradiographic analysis 225
- autoradiography 397
- autotrophs 337, 490

- bacterial plasmids 217
- betacyanin 464
- binary vector 81, 325
- biochemical inhibitors 202
 - mutation 201
- black mustard 197
- blue green alga 429, 442
- Brassica campestris* 2
- B. napus* 2, 14, 235, 253

- B. nigra* 329
- B. oleracea* 2, 449
- Brassica* species 197–216, 362
- brome mosaic virus 389
- bulbosum technique 30

- cabbage 197
- carbenicillin 178, 191
- carboxyfluorescein 203
- CAT 117
 - genes 83
- Catharanthus roseus* 462
- cauliflower 197
- cell manipulation 488
 - reconstruction 456
- cellulase 176
- cellulysin 465
- chemical fusion 199
- chemical mutagens 39
- chimeric proteins 401
- Chinese cabbage 197
- chloramphenicol 209, 376, 439
- chloroplast DNA 489
 - genomes 283, 299, 433
 - isolation 435
 - uptake 436
- chondriomes 16, 447, 489
- chromosome isolation 347
 - transfer 354
 - transplantation 343–359
- Citrus sinensis* 2
- clonal propagation 156
- cloning 475
- cotransformation 68, 229
- cotton 140–154
- Cowpea chlorotic mottle virus 62, 391
- Cruciferae 197
- culture media 220
- cyanobacteria 407
- cybrids 2, 198, 319, 361, 372
- cycloheximide 438
- cytochalasin 483
- cytometry 343, 489
- cytoplasmic male sterility 198, 360
- cytoplasts 15, 232, 447–458

- Datura innoxia* 337
Daucus capillifolius 2, 366
D. carota 2, 366
 DC voltage 246
 DEAE dextran 476
 detergents 330
 dextran 199, 471
 dichlorobenzonitrile 223
 dielectrophoresis 243, 267
 dioecy 45
 direct DNA transformation 87
 gene transfer 4, 217
 directed gene modification 188
 disarmed *Agrobacterium* 136
 disease resistance 3
 disomy 41
 DMSO 248, 483
 DNA integration 232, 236
 analysis 346, 352
 library 136, 343
 recombinants 75
 uptake 228
 Douglas fir 155
 driselase 248
- E. coli* 221
Echinichloa oryzicola 2
 electric fields 241
 electrical pulses 229
 electrofusion 3, 13, 199, 241, 257, 395, 416, 456
 electrogene mapping 257
 electron microscopy 352
 electrophoresis 180, 192, 257, 465
 electroporation 2, 13, 63, 244, 395
 embryogenesis 457
 embryogenic cell suspension 7
 enation mosaic virus 389
 endocytosis 61
 endosymbiont 430
 epichlorohydrin 468
 ethidium bromide 349, 368
 eubacteria 287
 eukaryotic cells 376
 Evans blue 336
 extra-chromosomal inheritance 289
 exogenous DNA 7, 54, 130
- fibroblasts 430
 ficoll 461, 468
 firefly luciferase 376–387
 fluorescein diacetate 464
 fluorochromasia 324
 fluorochromes 309
 flow analysis 310, 312
 cytometric analysis 304
 cytometry 10, 490
- sorting 10
 flow-sorted chromosomes 351
 foreign DNA 66, 228
 fosfomycin 182
 fragment analysis 290
 free-flow electrophoresis 472
 fructans 475
 fungal protoplasts 406–427
Fusarium oxysporum 12
 fusion chambers 242
 methods 198
 products 201
 fusogenic chemicals 411
- gametocides 43
 gamma irradiation 202, 429
 gene dose effect 38
 expression 380
 mutation 32
 operon 376
 regulation 91
 transfer 155, 173, 208
 genetic complementation 305, 428, 430
 engineering 1, 189, 488
 instability 349
 manipulation 26
 marker 10, 283
 transformation 40, 55
 variation 480
 genome multiplication 40
Glycine max 90, 329
 glyphosate tolerance 159
Gossypium hirsutum 90, 449
 gramineae protoplasts 118
- hairy roots 17
Helminthosporium 43
 helper plasmids 211
 henbane 189
 herbicide resistance 143, 197
 tolerance 8, 157
 heterocysts 443
Hordeum vulgare 463
 hybridization 232
 hygromycin 209
 hyoscyamine 188
Hyoscyamus 188–196
H. muticus 189, 453
- immunoblot analysis 150
 iodoacetate 202
 in vitro manipulation 1
 intergeneric crosses 197
 interspecific hybrids 156
 intranuclear injections 235
 inversions 29
 iontophoresis 229

- isoelectrofocusing 259
- kanamycin 58, 102, 146, 202, 209
 resistance 102, 159
- karyoplasts 16, 200, 482
- L-ornithine 389
- lactate dehydrogenase 205
- laser micropuncture 13
- leaf disc infection 6
- lesion formation 125
- leucine aminopeptidase 205
- linkages 29
- liposome 396
 fusion 228
- Lotus corniculatus* 2
- lucifer yellow 338
- luciferase chimeric gene 9, 377
- luciferin 9
- Lycopersicon esculentum* 2
- L. peruvianum* 486
- Lycopersicon* species 433, 486
- lysosomes 432
- lysozyme 173
- male sterile cytoplasm 11
- Malus pumila* 463
- mannopine 209
- Marchantia polymorpha* 284
- mass fusion chamber 250
- Medicago falcata* 2
- M. sativa* 2, 235
- meiotic recombination 28
- Mendelian inheritance 209
- metaphase chromosomes 348
- metrizamida 465, 471
- microcloning 14
- microdensitometry 344
- microinjectiles 396
- microinjection 14, 64, 217, 228, 345, 490
- micronuclei 9
- microprotoplasts 3
- microtools 229
- minicells 482
- miniplastids 163
- miniprotoplasts 15, 480–493
- mitochondrial genomes 360
 transfer 360–375
- molecular genetics 136
 transformation 36
- monosomics 34
- Moricandia arvensis* 2
- mt DNA 369
- mutagenesis 31
- mutants 3, 433
- mutations 31, 289
- mycorrhiza 406
- myoinositol 145
- necrosis 420
- neomycin 99, 136
- nepovirus 392
- Nicotiana* species 361
- Nicotiana glauca* 252
- N. langsdorfii* 252
- N. plumbaginifolia* 217, 252, 348
- N. rustica* 2
- N. sylvestris* 2
- N. tabacum* 2, 284, 329
- N. undulata* 2
- nif-gene 12
- nitrate reductase 454, 488
- nitro-blue tetrazolium 203
- nitrosoquarindine 189
- Nomarski optics 233, 334
- nononcogenic vectors 80
- nopaline 174, 191
- Northern blot analysis 150
 hybridization 238
- nuclear injection 210
- nuclei isolation 328
 transplantation 328
 uptake 334
- nucleic acid sequence 257
- nucleoplasts 482
- nucleotide sequence 290
- nycodenz 470
- octopine 77, 149, 174
- ogu cytoplasm 198
- oncogenic bacterial DNA 163
 vectors 79
- opine 163, 209
- organelles 205, 208
 transfer 338
- organogenesis 206
- Oryza sativa* 2, 90
- osmotic shocks 460
- oxyluciferin 377
- PEG 177, 199, 249, 335, 365, 391, 411, 429
- percoll 469, 486
- Petunia hybrida* 2, 4, 86
- P. inflata* 2
- P. parodii* 16
- phagocytosis 430
- Photinus pyralis* 376
- physical maps 290
- phytoalexins 407
- Phytophthora infestans* 123
- Pisum sativum* 463
- plant breeding program 27
- plasmids 217
- plasmodesmata 431

- plastomes 16
 point mutations 289
 poly- L-ornithine 12, 59
 polybase lysis 461
 polyethylene glycol 12, 177, 199, 318
 polysomy 39
 polyvinyl alcohol 397
Poncirus trifoliata 2
Populus 155
 tremula 166
 propidium iodide 206
 protoplast fragmentation 483
 protoplastids 430
 pTi DNA 56
 pulsed field gel electrophoresis (PFGE) 257
 putative cybrids 366
 perfusion treatment 364, 198, 246
 prokaryotic genes 82
 propidium iodide 206
 proteinase 248
 protoplast fusion 264, 311, 346, 439
 transformation 65
Pseudomonas 136
Pseudotsuga menziessi 155
 pseudovirions 400
 PVP 469
- radiolabelled DNA 161
Rauwolfia 241
 recombinant DNA 257, 290
 regeneration 203
 reported genes 83
 restorer lines 208
 restriction enzyme 290
 endonuclease 368
 RFLP 34, 205
 rhodamine 203
 rice protoplasts 108
 transformation 107–121
Ricinus communis 463
 RITC 311
- scanning electron microscopy 131
 scopolamine 188
Secale cereale 58, 90
 secondary metabolites 459
 segregation 28
 self incompatibility 45
 serpentine 311
Sinapis turgida 2
 slime molds 431
Solanum brevidens 135
S. chacoense 3
S. melongena 2
S. nigrum 453
S. tuberosum 2, 122, 253
S. turgida 2
- somaclonal variants 32, 205, 480
 somatic cell fusion 360
 Southern blot analysis 103, 162, 223
 hybridization 149, 180, 238, 368
 spheroplasts 113, 173
 embryogenesis 368
 hybrids 2, 241, 283, 292, 304, 343, 480, 488
 stable transformation 218
 subprotoplasts 447, 480
- T-DNA 78
 teratogenic cultures 162
 thermal neutron irradiation 134
 thylakoids 430
 Ti plasmids 7, 78, 163, 236
 TMV 62
 tonoplasts 459, 472, 490
Tradescantia paludosa 46
 transfer of chloroplasts 10, 136
 transformants 114
 transformation 1, 75, 208
 in brassica 197–216
 in cotton 140–154
 in henbane 188–196
 in poplars 155–172
 in potato 122–139
 in Vinca 173–187
 by viruses 398
 transformed protoplasts 304, 322
 transforming agents 388
 transgenic plants 8, 147, 343
 mice 229
 transient gene expression 66, 225, 383
 triazine 433
 tritiated thymidine 353
 tumorigenesis 209
- ultrastructure 418
 universal hybrid 201
 uptake of fungi 12
 bacteria 12
 urografin 470
 UV irradiation 126
- vacuoles 459–479
 vanomycin 178
Vaucheria 433
 vector system 79
 vegetative reproduction 46
Vicia faba 348
V. hajastana 10
Vigna unguiculata 329
Vinca rosea 173–187
 viral genome 401
 virus inoculation 390
 uptake 388–405
 vectors 4

viruses 211

weed control 143

Western bloc analysis 162

hybridization 238

X-irradiation 365

Zea mays 58, 99–196, 453, 463
