Liebe Eltern:

Den Dr. pluf hat habib heute ich
gestern bestanden. Netun gilt es dabei
keine und geld kostet es nicht.

Ich schreibe dann, wann ich heimkomme.

Jedenfalls nicht vor dem 29.XII.

Bitte meldet den speck in Efm.
an.

Criss eure Heel.

S. Kovalevskaya

A Russian Childhood

Translated, Edited and Introduced by B. Stillman

With An Analysis Of Kovalevskaya's Mathematics by
P. Y. Kochina

1978. XIV, 250 pp. 8 figs. Hardcover DM 54,-
ISBN 3-540-90348-8

Contents: Earliest Memories. – The Thief. – Metamorphosis. – Palibino. – Miss Smith. – Uncle Pyotr Vasilievich Krukovsky. – Uncle Fyodor Fyodorovich Shubert. – My Sister. – Anyuta's Nihilism. – Anyuta's First Literary Experiments. – Our Friendship with Fyodor Mikhailovich Dostoevsky. – Notes. – An Autobiographical Sketch. – On the Scientific Work of Sonya Kovalevskaya.

The childhood reminiscences of the famous Russian mathematician Sonya Kovalevskaya (1850–1891) are an important and delightful piece of cultural and social history. They describe the background and the development of one of the greatest female mathematicians in modern history.

Besides an exceptional research mathematician, S. Kovalevskaya was also a gifted writer, and a progressive social and political thinker who was in touch with many leading cultural figures of her time. In an episode in **A Russian Childhood** she describes a first encounter with Dostoevski.

A Russian Childhood has not been available in English for a considerable number of years. In addition to a completely new translation of the main text, this edition contains several passages which have never been published in English, a thorough introduction with much background material by the translator, notes, and a summary of Sonya Kovalevskaya's mathematical work by P. Y. Polubarinova-Kochina.

Hilbert – Courant

1986. XV, 547 pp. 65 photographs. Softcover DM 86,-
ISBN 3-540-96256-5

This is a combined edition of Constance Reid's two popular books. Hermann Weyl's obituary of Courant, but it does have a number of new photographs.

From the reviews of the previous edition: "David Hilbert (1862–1943) was one of the greatest mathematicians in an age of great mathematicians... Mrs. Reid has done full justice both to his life and to his work; and her account is supplemented by a condensed version of Hermann Weyl's appreciation of Hilbert's mathematical work written for the American Mathematical Society in 1944."

The Times

"Constance Reid, author of *Hilbert* and *A Long Way from Euclid*, has surpassed these achievements in *Courant*. This story of the German-American mathematician Richard Courant (1888–1972), founder of mathematics institutes at both Göttingen and New York University, belongs in every high school and university library and on the night table of anyone interested in mathematics..."

Science Books and Films

"Extra Göttingen non est vita. Outside Göttingen there is no life. So reads the arrogant motto on the wall of the rathskeller in that little hill town, where the yellow brick university lies just outside the old wall. It is Gauss's university, as for scientists Cambridge must always be Newton's. In 1895, a century after Gauss had matriculated, David Hilbert, scion of an old Puritan family and son of a Königsberg judge, became a Göttingen professor. Until he retired in 1930 he stood as a worthy successor to Gauss, first among a dozen great mathematicians of Göttingen."
