

# Index

## A

- Absorption
  - interstellar, 329
  - path, 170
  - stellar, 330
- Abundance matching, 245
- Accreting cold gas, 178
- Active Galactic Nucleus (AGN), 230, 240, 242, 252, 263, 266, 285, 356
  - luminosity function, 297
  - photoionization, 264
- Advanced Camera for Surveys (ACS), 335
- AGN-LAE, 240
- Angular Correlation Function (ACF), 247, 248
- Angular redistribution function, *see* phase function
- Aperture effects, 377
- Atacama LargeMillimeter/submillimeter Array (ALMA), 230

## B

- Balmer break, 213
- Balmer decrement, 232, 306
- Binary evolution, 325
- Binary fraction, 263
- Binned evaluation (of  $f(N_{HI})$ ), 142
- Blob, *see* LAB (Ly $\alpha$  Blob)
- Bohr model, 5
- BPT diagram, 240
- Breakthrough redshift, 178
- Brightness temperature, 99
- Bubbles
  - cosmic ionized, 282
- B-value distribution, 146

## C

- Circumgalactic Medium (CGM), 20, 211
- Clustering, 241, 250
- Cold accretion, 207, 208
- Collision, *see* transition
- Column density, 124
- Continuum
  - normalization, 133
  - opacity, 159
- Cooling, 25, 28
  - function, 204
  - radiation, 253
  - rate, 14
- Correlation function
  - angular, 245, 247
  - spatial, 310
- Cosmic Microwave Background (CMB), 280
  - polarization, 272
  - Thomson scattering, 272
- Cosmic Origins Spectrograph (COS), 335
- Cosmic photoionization rate, 297
- Cosmic reionization
  - clumping factor, 286, 287
- Cosmic web, 113
- Cosmic web imager, 77
- COSMOS field, 244
- Covering factor, 76
- Cross-section, 160
- Curve of Growth (COG), 127, 129

## D

- Damped Ly $\alpha$  system (DLA), 112, 159, 179
- Damping Wing (DW), 275
  - absorption, 275–277
- Dark Matter (DM)

halo, 201, 243–245, 248  
 halo formation, 209  
 halo mass function, 206  
 Dipole approximation, 160  
 Double diffusion, 51  
 Dust, 48, 232, 349, 386  
   absorption, 321  
   extinction, 350  
   reddening, 350

**E**

Einstein coefficient, 326  
 Epoch of Reionization (EoR), 197, 281, 285, 287  
 Equivalent width, 125, 136  
 Escape fraction  
   interstellar, 70  
 Evolution, 380  
 Expanding Shell (ES), 237, 238  
 Experiment to Detect the Global Epoch of Reionization Signature (EDGES), 282  
 Extinction, 232, 234, 239  
 Extragalactic UV Background (EUVB), 173, 176

**F**

Faint Object Telescope (FOT), 333  
 Feedback, 206  
 Fluctuating Gunn–Peterson Approximation (FGPA), 153  
 Fluorescence, 21

**G**

Galaxy  
   age, 358  
   bias, 247, 248  
   color, 358  
   ESO 338–IG04, 353, 359, 370, 375  
   ESO 400–G043, 363  
   formation, 200  
   green pea, 73, 346, 352–354, 357, 358, 369, 382  
   Haro 11, 363, 370, 375  
   Haro 2, 363, 382  
   IRAS 0833+65, 363  
   IRAS 08339+6517, 382  
   I Zw 18, 361, 362, 382  
   J0303, 370  
   J1457, 370  
   luminosity function, 202

M 33, 343  
 morphology, 357  
 NGC 3125, 353  
 NGC 5253, 353  
 SBS 1415+437, 362  
 SBS 0335–052, 361, 382  
 Seyfert, 338  
 starburst, 353  
 star forming, 340  
 TN J1338 1942, 241, 243  
 Tol 65, 361  
 ULIRG, 346

Galaxy Evolution Explorer (GALEX), 193, 265, 336, 344, 349  
 Gamma Ray Burst (GRB), 275  
 Gas  
   column density, 364, 367, 368  
   covering fraction, 364, 367  
 Gas cloud  
   contracting, 57  
   expanding, 57  
   static, 53  
 Gas cooling, 204  
 Gas phase  
   metallicity, 224  
 Goddard High Resolution Spectrograph (GHRS), 334  
 Green Pea (GP) galaxy, 229  
 Gunn–Peterson  
   effect, 270, 273, 284  
   optical depth, 77

**H**

H $\alpha$ , 326, 349  
 H $\beta$ , 326, 349  
 Halo Occupation Distribution (HOD), 243, 245  
 Hamiltonian, 116  
 HETDEX Pilot Survey (HPS), 193  
 High Mass X-ray Binary (HMXB), 285  
 High resolution spectroscopy, 359  
 HII regions, 17  
 HIRES spectrometer, 113  
 HI 21 cm emission, 281–284  
 Hobby Eberly Dark Energy Experiment (HETDEX), 320  
 Hubble Deep Field (HDF), 192  
 Hubble Frontier Field (HFF) project, 289  
 Hubble Space Telescope (HST), 334, 345  
 Hydrogen  
   general, 2  
   molecular, 49

**I**

Infrared continuum, 328  
 Initial Mass Function (IMF), 214, 262, 264  
   top heavy, 262, 265  
 Integral Field Unit spectroscopy (IFU), 354  
 Intergalactic Medium (IGM), 20, 111, 157,  
   158, 211, 268, 270  
 International Ultraviolet Explorer (IUE),  
   334, 342  
 InterStellar Medium (ISM)  
   clumpiness, 260, 262  
   dust, 260  
   ionization state, 352  
   properties, 222  
 Interstellar Medium (ISM), 211, 231, 257  
 Ionized hydrogen fraction, 269  
 Ionizing photons  
   escape fraction, 289, 291  
   production efficiency, 292  
 IRIX ratio, 234

**K**

Keck telescope, 113  
 Kinematics, 362

**L**

LAE-AGN, 242, 311  
 Large Area Ly $\alpha$  survey (LALA), 192  
 LARS survey, 345  
 Line Spread Function (LSF), 131  
 Luminosity density, 239  
 Luminosity function, 214, 347  
 Ly $\alpha$   
   asymmetry, 371  
   cross-section, 34  
   damping wing, 274  
   doublet, 119  
   duty cycle, 249  
   DW absorption, 284  
   effective opacity, 151  
   emitting galaxy fraction, 279  
   equivalent width (EW), 262, 264, 291,  
     323, 339, 358  
   escape fraction, 70, 217, 238, 240, 250,  
     259, 260, 321, 347, 348, 358, 367, 383  
   extended halos, 252  
   flux, 329  
   forest, 4, 20, 111, 139  
     line density, 148  
     mock spectra, 150  
   halo, 264  
   imaging, 373

  line profile, 236–238  
   luminosity density, 215, 217  
   luminosity function, 242, 277  
   offset velocity, 236  
   optical depth, 260, 321  
   polarization, 87, 253–255  
   profile, 235  
   resonant scattering, 239  
   scattering, 253, 261  
   velocity offset, 238  
   double diffusion, 51  
   dust absorption, 48  
   escape fraction, 59  
     effective, 72  
   photons  
     destruction, 48  
     transition  
       collisional mixing, 49  
 Ly $\alpha$  Blob (LAB), 28, 197, 252, 349  
   AGN, 254, 255  
   AGN photoionization, 252  
   cooling radiation, 252  
   definition, 252  
   Ly $\alpha$  scattering, 253–255  
   physical origin, 252  
 Ly $\alpha$  emission  
   origin, 211  
 Ly $\alpha$  Emitter (LAE), 26, 257  
   CR7, 264, 265  
   definition, 194  
   detection, 193  
   discoveries, 191  
   early searches, 190  
   ionization state, 229  
   Ly $\alpha$  escape fraction, 259, 261  
   metallicity, 227  
   morphology, 220, 222  
   neutral hydrogen fraction, 276  
   observability, 190  
   PRG1, 264, 265  
   search techniques, 194  
 Ly $\alpha$  Halo (LAH), 252, 256  
   physical origin, 258  
   scale length, 258  
 Ly $\beta$ , 368  
 LyC (Ly Continuum), 290  
 Ly $\gamma$ , 368  
 Lyman-Alpha Reference Sample (LARS),  
   193  
 Lyman Break Galaxy (LBG), 26, 195, 208,  
   250  
 Lyman Limit System (LLS), 112, 159, 162,  
   169, 173, 178

surveys, 163

Lyman series

- Doppler line broadening, 122, 123
- Doppler parameter  $b$ , 122
- effective opacity, 157
- line opacity, 120
- line profile, 120, 139
- natural line-profile, 121
- spontaneous emission coefficient, 120
- photon cross-section, 120

**M**

Mass-metallicity relation, 228

Mean free path, 168, 173

Media

- multiphase, 59

Metal abundance, 352

Milne relation, 161

Monte-Carlo radiative transfer, *see* radiative transfer

MUSE spectrograph, 77

**N**

Na ID, 370

Nebular lines, 213, 235

Neufeld's effect, 261

Neutral hydrogen fraction, 269, 272, 276

- redshift evolution, 279

$N_{\text{HI}}$  frequency distribution, 141

Nyquist limit, 132

**O**

Optical depth, 111, 124, 125, 270, 351, 366

Optically thick HI absorption, 158

Outflows, 71, 76, 235, 362

Overdensity, 241, 243

Oxygen abundance, 225–228

**P**

Payne-Gaposchkin, Cecilia, 2

Phase function, 31

Photodissociation Region (PDR), 222, 223

Polarizability, 91

Polarization, *see*  $L\alpha$

- E-mode, 273

Population III, 262–264

Population synthesis, 323

Press–Schechter function, 202

Primordial Black Hole (PBH), 285

Principal Component Analysis (PCA), 135

Projects

- observational, 299–303
  - HERA, 307
  - SKA, 307

**Q**

QSO, 270, 276, 338

- 3C 273, 333
- BR2237-0607, 191, 192
- Gunn–Peterson effect, 284
- luminosity function, 296
- number density, 296
- Type I, 163
- UM287, 254, 255

**R**

Radiative transfer

- equation, 38
- Monte-Carlo rejection method, 62, 63

Radio galaxy

- 53W002, 191, 192

Radio Recombination Line (RRL), 327

Recoil, 43

Recombination, *see* transition

Reionization, 80, 173, 232, 268

- AGN contribution, 295
- galaxy contribution, 293
- history, 270, 272, 274
- redshift, 274
- sources, 285

Rejection method, 62, 63

Resolution (R), 131

Rotating stars, 325

Rydberg formula, 322

**S**

Scattering, 40

- cross-section, 28
- dipole, 45
- halos, 375
- isotropic, 45
- resonant, 47, 48, 94, 95
- wing, 94

Schechter function, 202

Self-shielding, 25

Shell model, 73, 74

Sloan Digital Sky Survey (SDSS), 113

Space Telescope Imaging Spectrograph (STIS), 335

Spectral Energy Distribution (SED), 212, 213, 235, 264

Spectral hardness, 265, 267  
 Spin-orbit coupling, 117  
 Spin temperature, 97, 99, 100  
 SSA22, 192, 197, 244, 252, 257  
 Star formation, 204  
 Star Formation Rate (SFR), 325  
   density, 218  
 Star Formation Rate Density (SFRD), 348  
 Stellar population, 212  
 Stellar to Halo Mass Ratio (SHMR), 244–  
   247  
 Strömgren radius, 229  
 Submillimeter Galaxy (SMG), 196, 208, 235  
 Suprime-Cam, 193  
 Surface Brightness (SB), 22  
   profile, 259, 377, 379  
 Survey  
   LARS, 346

## T

Thermal energy, 12  
 Thomson scattering, 29, 31  
   cross-section, 29, 33, 34, 38, 124  
   optical depth, 273, 284  
 Transition  
   collision, 10, 12, 19  
   hyperfine, 3, 280, 359  
   radiative, 8  
   recombination, 10  
     case-A, 10, 16  
     case-B, 10, 16, 323

  in HII regions, 18  
   time, 21

## U

UV background radiation, 269  
 UV continuum, 218, 233, 258, 260, 261, 323,  
   328, 330, 358  
   luminosity function, 217  
   optical depth, 260  
   relative escape fraction, 289  
 UV luminosity density, 288

## V

Very Large Array (VLA), 386  
 Voigt  
   function, 123  
   profile, 35, 123  
 Voyager 2 spacecraft, 343  
 Voyager spacecrafts, 333  
 VPFIT package, 139

## W

Wide Field Camera 3 (WFC3), 336  
 Winds, 362  
 Wolf–Rayet (WR) star, 263  
 Wouthuysen-Field (WF)  
   coupling, 97  
   effect, 100, 280, 282
