DEGIORGIO, V. (Guest-editor)

Trends in Colloid and Interface Science II

1988. X, 320 pp.

Progress in Colloid & Polymer Science, Vol. 76

Editors: H.-G. KILIAN; G. LAGALY

Hard cover DM 168,-. US\$ 98.00.

ISBN 3-7985-0777-5 (Steinkopff Verlag); ISBN 0-387-91355-1 (Springer-Verlag New York)

Trends in Colloid and Interface Science II contains the proceedings of the 1st European Colloid and Interface Society Meeting, held in Como, Italy, in 1987. The book's three main sections, "Colloids," "Amphiphile Solutions," and "Interfaces," provide an up-to-date account of new developments in the structure and stability of colloidal dispersions, colloidal semiconductors, fractal aggregates, micelles, microemulsions, lyotropic phases, biological amphiphiles, monolayers, adsorption on colloids such as clays, and mineral extraction.

HUMMEL, K.; SCHURZ, J. (Guest-editors)

Dispersed Systems

1988. 252 pages.

Progress in Colloid & Polymer Science, Vol. 77

Editors: H.-G. KILIAN; G. LAGALY

Hard cover DM 148,-. US\$ 89.00.

ISBN 3-7985-0778-3 (Steinkopff Verlag); ISBN 0-387-91337-8 (Springer-Verlag New York)

This significant volume comprises a broad selection of offerings from the 33rd conference of the "Kolloid-Gesellschaft", held in Graz, Austria, in September, 1987. Papers are presented by a truly international group of authors who address the most current developments in colloid science from both theoretical and practical aspects.

Distribution in US and Canada through Springer-Verlag, 175 Fifth Avenue, New York, NY 10010; for other countries, order through your bookseller or directly from Dr. Dietrich Steinkopff Verlag, P. O. Box 11 1442, 6100 Darmstadt, FRG.

Rheologica Acta

Participating Societies: Australian Society of Rheology · Belgian Group of Rheology · British Society of Rheology · Canadian Rheology Group · Czechoslovak Group of Rheology · Deutsche Rheologische Gesellschaft · Grupo Español de Reología · Groupe Français de Rhéologie · Società Italiana di Reologia · Sociedad Mexicana de Reología · Nederlandse Reologische Vereniging · Arbeitsgruppe Rheologie in der Gesellschaft Österreichischer Chemiker · Swedish Society of Rheology

Executive Editor: H. H. Winter, Amherst MA, U.S.A.

Rheologica Acta publishes theoretical and experimental contributions on phenomenological and structural rheology (macro- and micro-rheology), thermo-, electro- and magneto-rheology, rheo-optics and rheometry, as well as applications of rheology to extrusion, spinning, blowing, moulding, calendering, coating, curing, flows through pipes, ducts and porous media, etc., including numerical simulations.

The journal reports investigations in solid and fluid materials, in mono- and multiphase systems as melts, solutions, powders, foams; as well as metals, plastics, rubbers, surfactants, adhesives, building materials, sludges, soils, rocks, biological substances, food, etc.

Rheologica Acta's contributors and readers include engineers, mathematicians, physicists, chemists, biologists, and physicians. Original contributions in English, French, or German are published. The prime consideration in accepting a paper is scientific excellence and specialists working in virtually every part of the world act as referees. Instructions to prospective authors may be found in each issue of Rheologica Acta.

Subscription Information: ISSN 0035-4511

Published bimonthly

1 year: DM 890,- plus postage; US\$ 518.00 including postage

Members of all Participating Societies (see above) and subscribers to Colloid and Polymer Science receive 20% discount.

Supplement to "Rheologica Acta," Vol. 27 (1988)

Progress and Trends in Rheology II

Proceedings of the Second Conference of European Rheologists, Prague, June, 1986

H. GIESEKUS, M. F. HIBBERD, Dortmund, FRG (Eds.)

in co-operation with

P. MITSCHKA, P. RIHA and S. SESTAK, Prague, Czechoslovakia

1988. 502 pp.

Subscribers to "Rheologica Acta" receive 20% discount

Cloth DM 280,-. US\$ 170.00

ISBN 3-7985-0770-8

Progress and Trends in Rheology II presents a representative survey of current activities in European rheological research. Subjects range from theoretical modelling and prediction on Non-Newtonian flows over rheometry to the rheology and processing of diverse materials, including food and biological substances. An additional 166 abstracts of contributions to the conference are included, many of which contain unpublished results. This volume is indispensable to all those engaged in rheology and its applications in engineering, production, biology, and medicine.
