

Acknowledgments

I am grateful for the help I received from many individuals as this book was constructed. I would especially like to thank my wife, Ann Lessner Schwartz, for her support and patience during this long project, and for taking the time to proofread the final manuscript. My graduate student assistant, Jeffrey Kueny, provided invaluable support, including many long hours of tedious work reformatting and checking references. The following individuals generously took the time to review one or more of the chapter manuscripts: Elisabeth Beaubien, Gregory Carbone, Xiaoqiu Chen, Frank Chmielewski, Peter Curtis, Peter Dunn, Kevin Gallo, Donn Haglund, Heikki Hänninen, Gregory Jones, Marie Keatley, Annette Menzel, Patrícia Morellato, Eric Post, Bradley Reed, Jacques Régnière, James Reinartz, Donatella Spano, Larry Tieszen, Arnold vanVliet, and Michael White. I also appreciated the assistance of editors and staff at Kluwer, including: Helen Buitenkamp, Jacco Flipsen, Deborah Doherty, Noeline Gibson, Sandra Oomkes, Lanette Setkoski, and Claire vanHeukelom.

Lastly I would like to acknowledge the contributions that my high school science teacher, Manuel Thies, my master's advisor, Jay Harman, and my doctoral advisor, Glen Marotz, made toward advancing my career as a scientist.
