

INDEX

[This index departs in some ways from standard analytical indices, but not in ways that will reduce its usefulness. Not all of the papers in the volume could be written easily to conform to the Reidel style sheet. This means that in many cases there is a great proliferation of proper names and titles of books not necessarily required in a simpler style. Thus many proper names have not been indexed, and almost no titles of books and other works. Also, in those cases where there is much reference material, the texts have been left to speak pretty much for themselves.]
