

# Subject Index

- Activity, 97, 239
- algebra of observables, 9, 10, 20
- algebraic method, 154
- average number of particles, 219
- average of an observable, 57, 59
- average value, 3, 4, 6, 20
- averages
  - anomalous, 406, 410, 411
  - ordinary, 406, 411
- averaging formula, 9
- $\alpha$ -particles, 216
  
- BBGKY hierarchy, 66
- Bogolyubov equations, 57
  - stationary solutions of, 85
- Bogolyubov's
  - compensation principle, 196
  - principle of weakening of correlations (clustering principle), 153, 154, 410
  - proof, 165
  - $u$ - $v$  (canonical) transformation, 182, 183, 215, 389
- Boltzmann statistics, 13
- Bose–Einstein condensation, 222, 223
- Bose–Einstein statistics, 13, 22, 136, 218, 260
- Bose gas, free, 235
- bosons, 13, 22, 57
  
- $C$ -numbers, 229
- canonical anticommutation relations, 22, 182, 183, 215, 324, 307, 378, 388, 389
  - one-time, 29
  - representation, 23, 182
- canonical commutation relations, 21, 22, 182, 228, 230, 324, 371, 378
  - in momentum space, 36, 38
  - one-time, 29, 42, 233, 254, 363
  - representation, 21, 22, 182
- canonical ensemble, 57, 86, 97, 238
  
- canonical transformation, 182, 183, 230
- Cauchy problem, 73
- chemical potential, 182, 239
- chronological product (T-product), 35, 254, 256, 363, 378
- cluster, 317, 339
- commutator, 7, 80
- compactification, 109
- composite trajectories, 137
- condensate, 284, 286, 352
- condition
  - initial, 7
  - of adjointness, 183
  - regularity, 161
  - stability, 91, 101
- configuration integral, 86
- coset, 420
- criterion of selfadjointness, 44
  - Kato's, 47, 48, 114
- critical temperature, 222
  
- Dangerous denominators, 196
- dangerous diagrams, 196, 197
- degeneracy, 406, 410, 416
- density matrix, 3, 4, 5, 11, 19, 57
  - equation for, 421
  - equilibrium, 421
  - $N$ -particle, 19
  - nonequilibrium, 421
  - reduced, 264, 299, 300
- diffusion, 108
- Dirac  $\delta$ -function, 21
- direct sum, 16, 53
- Dirichlet conditions, 291
- disintegration energy, 212
- distribution functions, 236, 237
- domain of definition, 43
  
- Eigenvalue, 187
- eigenvector, 99, 187

- electron, 181
- electron-phonon interaction, 41
- energy gap, 207, 211, 212
  - of elementary excitations, 226
- equation(s)
  - BBGKY, 66
  - Bogolyubov, chain of, 66, 68, 71, 72
    - limiting, 67
  - compensation, 198
  - evolution, 72, 80
  - for density matrix, 63
  - gap (for the gap), 218, 244
- equilibrium, 416
- evolution of states
  - of arbitrarily many particles, 14
  - of finitely many particles, 1
- evolution operator, 19, 32, 53
  - $N$ -particle, 18
- excitation, 203
- excitations, one-particle, 204, 207
- external field, 57
  
- Fermi–Dirac statistics, 13, 23, 136, 217, 260
- Fermi energy, 200
- fermions, 13, 23
- Feynman diagrams, 190
- Feynman integral, 81, 84
- Feynman–Kac formula, 90, 113, 114, 137
- Fock space, 14, 16, 182, 291, 324
  - subspace of sequences of antisymmetric functions, 16
  - subspace of sequences of symmetric functions, 16
- Fourier transform, 36
- free energy, 244
- functional integral, 83
- functional-state, 10, 13
  - on an algebra, 12
  
- Gibbs distribution, 85
  - canonical, 86
  - grand canonical, 86
- gradient transformations, 402, 426
  - infinitesimal, 427
- grand canonical ensemble, 60, 61, 97, 123, 218
- grand partition function, 86, 218, 291
- Green's functions, 253, 273, 357, 378, 403, 410
  - advanced, 415
  - anomalous, 254, 404, 411
  - equations for, 253, 268, 269, 291, 358, 363, 364, 366, 371, 378
- Green's functions,
  - Euclidean, 261, 262, 299
  - in a bounded region, 291
  - in the model of superfluidity, 363
  - multi-time, 279
  - normal, 254
  - ordinary, 415
  - retarded, 415
  - symmetry properties, 423
  - temperature, 256, 261, 291
    - free, 259, 261, 262
  - theorem on singularities of  $1/q^2$  type, 426, 431–433
- group
  - of bounded operators, 78
  - of evolution operators, 73, 74
  - one-parameter, 3, 19
  
- Hamiltonian, 1, 3, 39, 57, 102
  - approximating, 213, 214, 362, 388
  - BCS, 208, 213, 214, 307, 345
  - Bogolyubov model, 226, 229, 230
  - free, 24, 31, 87, 182, 186, 187, 228
  - Fröhlich, 40, 181, 182, 313
  - Fröhlich–Peierls, 344
  - general, 344, 349
    - in the theory of superconductivity, 344, 349
    - in the theory of superfluidity, 352
  - in a bounded region, 39
  - model, 344, 349, 388
    - in the theory of superconductivity, 344, 349
    - in the theory of superfluidity, 352
  - of interaction, 24, 31, 186, 228
- Heisenberg equation, 12, 21, 28, 41, 233, 235, 254, 279, 288, 358, 363, 371, 378
- Heisenberg representation, 12, 20, 28, 29, 41, 253, 261
  - in momentum space, 36, 39
- Hilbert space, 43
  - of square integrable functions, 2
  - norm, 2
- Hölder inequality, 295, 301
- holomorphy, 291
  
- Infinitesimal generator, 53, 73, 78, 80
- Integral over trajectories, *see functional integral*
- Interaction representation, 30, 31, 54, 257
- Inverse temperature, 219

- Kato conditions, 81
- kernel, 4, 44, 52, 81, 83, 87  
degenerate, 100
- Kirkwood–Salsburg equations, 123–125, 127, 160  
in nonintegral form, 161  
operator, 180  
symmetrized, 161
- Kronecker symbol, 27
- Law of conservation, 401  
of momentum, 404  
of the number of particles, 402, 403
- Liouville equation, 7
- Maxwell–Boltzmann statistics, 136
- measure  
conditional Wiener, 88  
probability, 109
- method  
of approximating Hamiltonian, 213, 214  
of steepest descent, 241
- model  
Bardeen–Cooper–Schrieffer (BCS), 307, 388  
Bogolyubov, of superfluidity, 307, 309  
Fröhlich, 181  
Huang–Yang–Luttinger (HYL), 307, 312, 370, 371, 383  
Peierls–Fröhlich, 307, 313, 378
- multiplication, operation of, 155, 157
- Nuclear norm, 77, 301
- Observables, 10, 11, 58  
additive, 58  
one-particle, 58  
 $s$ -particle, 59, 97  
two-particle, 59
- occupation numbers, 239
- operator(s)  
 $A$ -boundedness of, 47  
adjoint, 5, 43  
annihilation, 21, 23, 28, 29, 31, 36–38, 182, 214, 230, 233, 253, 261, 285, 358  
Bose, 22  
closed, 43  
closure of, 43  
compact, 99, 301  
creation, 21, 23, 28, 29, 31, 36–38, 182, 214, 230, 233, 253, 261, 285, 358  
degenerate, 100  
operator(s)  
essentially selfadjoint, 47  
Euclidean, 256  
free, 257, 261  
evolution, 14, 256, 257, 259  
extension of, 43  
Fermi, 23, 259  
Heisenberg, 256, 363  
isometric, 99  
nilpotent, 329  
nuclear (trace-class), xiv, 7, 52, 73, 100, 301  
of creation and annihilation of quasiparticles, 231  
of multiplication, 46  
of permutation, 14  
of the number of  $\alpha$ -particles, 217  
of the number of particles, 27, 230  
of the number of quasiparticles, 236  
positive, 6  
positive definite, 77  
range of values, 44  
second quantization, 68  
in the Heisenberg representation, 69  
selfadjoint, 2, 43, 44, 57  
positive nuclear, 52  
“smoothed”, 22, 23  
statistical, 123, 264  
limiting, 67  
 $n$ -particle, 60, 62  
of quasiparticles, 236  
one-particle, 58, 61  
two-particle, 59, 62  
symmetric, 4  
unitary, 2, 3
- Partition function, 238
- perturbation theory, 187
- phase transition, 225
- phonons, 41, 181
- Planck constant, 1, 14
- positive definiteness, 63
- potential, stable, 91
- pressure, 219, 225, 243, 377  
partial, 243
- principle of uniform boundedness, 104
- product topology, 109
- projection, 4
- projector, 5
- Quasiaverage, 401, 406, 416
- quasimomentum, 182, 218

- quasiparticle, 183, 207, 231
- Resolvent, 333  
set, 333
- Scalar product, 2, 15, 37, 43
- Schrödinger equation, 1, 3, 7, 21, 24, 33, 53, 261
- Schrödinger representation, 11, 280, 411
- Schwarz–Buniakowski inequality, 418, 420
- second quantization, 21, 68  
in momentum space, 36
- selection principles, 401, 403, 404, 406
- sequence  
of nuclear operators, 73  
of  $s$ -particle statistical operators, 86  
of statistical operators, 60, 68
- small parameter, 187
- solution  
strong, 73  
weak (generalized), 73
- space  
Banach, 73  
Hilbert, 2, 15  
 $N$ -particle, 15, 16  
of trajectories, 109  
of translation invariant functions, 315, 357
- spectral representation, 416
- spectrum, 332, 333  
discrete, 238  
point, 218
- spin, 27
- state  
degenerate, 254, 406, 410  
excited, 211, 212  
ground, 207, 208, 211, 213, 253  
mixed, 4, 31  
 $N$ -particle, 18  
nondegenerate, 410  
normal, 200, 211  
of a system, 1, 3  
one-particle, excited, 212, 213  
of  $\alpha$ -particles, 216  
pure, 4  
superconducting, 200, 211  
superfluidity, 218
- strong convergence of operators, 152
- subspace of pairs, 347, 349, 352
- subspace of pairs and condensate, 353
- superconductivity, 181
- support, 152
- symmetrized product, 10
- system  
in a vessel, 3, 9, 57, 72  
in the entire space, 1  
infinite, 67  
of fixed number of particles, 57  
of random number of particles, 60
- T-exponent, 257
- T-product, see *chronological product*
- temperature, critical, 222
- tensor product, 109
- theorem  
Banach–Steinhaus, 104  
Lebesgue (majorization), 114  
on majorized convergence, 90, 91, 96, 112  
Riesz–Markov, 109  
Stone–Weierstrass, 109  
Stone’s, 53  
Tykhonov, 109  
Wick, 262  
generalized, 262
- thermodynamic equivalence, 273
- thermodynamic limit, 66, 81, 123, 133, 214, 222, 224, 232
- thermodynamic limit transition, see *thermodynamic limit*
- thermodynamic stability, 232
- trace, 8
- trajectory, 83, 109
- Trotter formula, 81, 87, 104, 112, 114
- Unitary equivalence, 32
- $u$ - $v$  transformation, see *Bogolyubov’s  $u$ - $v$  canonical transformation*
- Vacuum, 183, 187, 216, 231  
physical, 253
- variation of average, 428, 430
- vectors of state, 2, 16, 31, 32
- velocity of sound, 182, 233
- Wave function, 1, 14  
antisymmetric, 13  
symmetric, 13
- Wiener integral, 87, 97, 112, 115, 123, 161
- Wiener measure, 109, 169, 173  
conditional, 173
