INDEX

aggregation, conventional 952
  fundamental equations 944–949
    technical coefficients 949
  information approach to 955–980
  input-output forecasting and 972
  linear, input-output analysis and 939–954
  perfect 951
  problem, partial index numbers and 668
  procedure 960
aid, development, amount of 820
    effectiveness of 822
    international inequality and 811–835
  effect on per capita consumption 834
  granting and receiving 828
    numerical study 831
  granting, developed country model 828
  receiving, underdeveloped country model 830
almost additivity, independence transformation and 793–797
asset information 994, 996
  balance sheet information and 1012
  disaggregation of 997
  industry wide 1016

balance sheet, bivariate interpretation 1010
  decomposition, asset and liability decomposition 1013
    time horizon 1013
  disaggregation of 1000
  industry wide 1016
  information 995, 1010, 1011
Barten's matrix equation 784
behavior, random, maximum likelihood estimation and 718
  rational random 713–724
behavioral equation, disturbances of, economic theory 705–712
budget enquiry, price, quality and 587–611
  share, transformed goods and 759
    transition of, Dutch 803–808

class, social, trans-generational 889–904
commodity, as set of qualities 593
  price 587, 588, 591, 592
    increase of 599
  purchase, empirical investigation of 601 ff
company, comparison of, information measure of 1013
complementarity, definition 614 ff
  substitution and 613–626
consumer behavior 588
    empirical investigation 603 ff
  budget 589
  demand, allocation character 755
    analysis of 637 ff, 747
    behavioral equations of 711–712
    price term of equations of 643
    theory of 719
  good, budget share transitions 803–808
  income, variation of 590
  preference 748
  real income 805, 806
consumption, international comparison 837–861
  theory, differential approach 752
correlation, canonical, extension of 929
  divergence, dispersion and 850
costs information 1002
criterion function, approximation of 719
  maximization of 713
cross-value matrix 664
current item information 1013
  industry wide 1018

decision, constrained 710–711
  discrepancy vector 707
  dispersion 715
  implementation of 714
  planning of 714
  unconstrained 707–710
  variable, elementary 708
  vector, random 715
degree of freedom 933
demand analysis, information theory and 647, 648
    information approach to 627–651
    probabilistic 627
  conditional 765
    estimation of 720
  equation, differential form 752
    weak separability and 768
  estimation of, measurement errors and 727–731
  function, Dutch 640
  model, homogeneity-constrained 733

system, cross-country, real income errors and 727
differential 754
estimation of, symmetry-constrained 733–739
nonlinear, estimation method for 741–744
dispersion, divergence, correlation and 850
entropy of 716
disturbance, random, behavior and 706
variation of, theory of 705–712
divergence as squared distance 852
dispersion, correlation and 850
divisia index 753–758, 765, 766, 803–808

economic development, unequal 909–920
efficiency, RMSE error and 738
Engel curve 613–626
entropy, decrease of, loss minimization by 718
information and 992
maximum, distributed lag specification by 923–926
of a distribution 716
of sales 1008, 1009
parliamentary representation and 1025
political, desired 1023–1032
racial 1034
equation, behavioral, disturbances of 705–712
error in estimation of demand systems 734
standard, computation of 737
estimation, least-squares, for nonlinear demand system 741–744
expenditure, coal miners', log-change of 841
total, logarithmic differences in 838
expenses information 1002

factor reversal test 690
financial statement, analysis of, information theory and 991–1020
firm, input-output analysis of, microprediction 942
microtheory of 939
theory of, independence transformation and 760
fit, information-theoretic measures of 927–935
fixed item information 1013
food, aggregate group, disaggregation of 970
Frisch price index 729, 754, 758

good, groups of, strong separability and 764
transformed, budget share and 759
income elasticity and 758
group, demand for 765
membership, representation and 1024

head, human, size of 931

income, distribution of 811
Lorentz graph 916
Pareto coefficient 813
trend with time 814
world-wide 812
effect, deflator for income 640
elasticity of 607
transformed goods and 758
estimation of, errors in 863–865, 878
moment matrix of 871
numerical results 875
standard error of 870, 872
individual, distribution of 823
inequality, estimation of, application 869
measure of 867, 911
standard error of estimate 876, 879, 885
international comparison 877
linear preference coefficient and 623
national, industrialized country 817
population and, world regional 910
real, errors in, demand estimation and 727
regional, data 865
inequality in 863–887
world, estimate of 865
inequality of 905–908
independence transformation 747–791
composition matrix 794
constrained principal components and 762
derivation 779–791, 795
diagonalization 780
Hessian of 785
invariance constraint 779
matrix equation 784
multiple roots 782
numerical results 773
parametrization of 787
separable groups and 764
singular case 783
theory of the firm and 760
under almost additivity 793–797
weak separability and 771
index, cost of living 675–688
geometric mean prices and incomes 680
geometry of 677
income, geometric mean prices and 680
information component of 642
luxury 648
number, best linear 655–674
fitting 667, 671
geometric 630, 656

geometry and numerical approximation of 675–688
Laspeyres 672
new formula for 689–701
outliers and 672
pair of 680
partial, aggregation problems and 668
price 657
quantity 661
symmetric linear 662, 665
price, constant utility 631
real income 675–688
geometry of 677
volume, commodity contribution to change of 641
indifference curve 589
industrialized country, aid to underdeveloped countries 817
income in 817
industry, input-output analysis, macroprediction 943
system at sector level 955
macrotheory of 941
inequality, social status and 889–904
inflation, overstatement of 728
information approach to aggregation of input-output tables 955–980
approach to demand analysis 627–651
asset and liability 994
balance sheet, industry wide 1018
bit as measure of 993
decomposition equation 963, 999
decomposition of input-output aggregation 962
definition of 628
entropy and 992
expectation, macroscopic 998
microscopic 998
expected 992, 994
mutual 1006
racial integration measured by 1033–1040
theory 628 ff
concepts of 991
demand analysis and 648
financial statement analysis using 991–1020
measure of fit based on 927–935
simultaneous equation models and 931
total amount of 930
input heterogeneity 964
independence transformation 750
input-output aggregation, information decomposition of 962
sector level 955–980
analysis, linear aggregation in 939–954
forecasting, aggregation and 972
table, aggregation of, information approach 955–980
Dutch, aggregation of 965
Dutch, information decomposition of 967
information content of 958
integration, racial, measurement of 1033–1040
intercompany comparison, information measure of 1013
international comparison, single scale for 845
inequality, development aid and 811–835
development of 909–920

Klein model I 932
Kruskal's average, informational version of 928

lag, distributed, specification by maximum entropy 923–926
leisure goods, demand for 749, 767
liability information 994, 997
balance sheet information and 1012
disaggregation of 997
industry wide 1016
likelihood, maximum, estimation of 742
random behavior and 718
Lorentz graph 916
loss, expected 717
minimization of 718

mean, geometric, index numbers and 681
weighting by 691
measurement, errors in, demand estimation and 727–731
meat, demand for 767
analysis of 748
medium term item information 1013
message, indefinite, information content of 993
information content of 629, 992
microbill 950

occupational mobility, prediction of 897
output heterogeneity 964

Pareto coefficient, distribution of 826
distribution 813
parliamentary representation 1023
information approach 1025
proportional, axioms 1029
political entropy, desired 1023–1032
representation 1024
population, income and, world regional 910

preference, coefficient of, correlated 621
income and 623
linear, residual variation and 618, 621
coefficient of, uncorrelated 619
independence 756
transformation 748 ff, 757
derivation of 779–791
price as quality indicator 589
average paid, inferiority effect 590, 591
change, of quantity change and 648
data, observed, index number approximation by 683
deflator 646
dispersion of, divergence of value share 847
elasticity of 606
formation of, empirical investigation of 601
index, best linear 657
symmetric 662
empirical justification 633
linear 655–674
indicator 598
international comparison 837–861
level, international comparison 843
proportionally moving, of qualities 594
quality, budget enquiry and 587–611
random error in 729
principal component analysis 747
constrained, independence transformation and 762
proportionality, weak 1029

quality, commodity as set of 593
indicator of, quantity and 609
perfectly homogeneous good 587
price 588
budget enquiry and 587–611
quantity, change of, price change and 648
data, observed, index number approximated by 683
dispersion of, divergence of value share 847
index, best linear 661
linear 655–674
symmetric 662
quality indicator and 609
random error in 729

racial entropy 1034
RAS adjustment, shift-share and 981–987
regression, multivariate linear, measure of fit for 927–935
univariate linear, measure of fit for 927–935

sales entropy 1009
average conditional 1008
information 1002
statement, double entry, degree of dependence 1005
segregation, informational measure of 1035
separability, strong, groups of goods and 764
weak, differential demand equations and 768
shift-share, RAS adjustment and 981–987
simultaneous equation, model, information theory and 931
Slutsky coefficient 720
symmetry 733
social status, bivariate distribution 892, 893
Gumbel family, bivariate distribution 894
implementation of 896
inequality and 889–904
model 890
substitution, complementarity and 613–626
definition 614 ff
marginal rate of 717

textile, demand for 928
time horizon information 1012
industry wide 1017

underdeveloped country, aid to 818
income in 819
inward investment flow 816
utility function 588, 589, 594, 614 ff, 748
consumer demand and 719
indirect, index numbers and 675
maximization of 711
quadratic 616

value share, predicted vs observed 649
variable, economic, range of 717
variance as squared distance 852
variation, residual, linear preference coefficients and 618
volume level, international comparison 843
voting, entropy and 1027
voting, parliamentary, two-dimensional 1031

world regional development 909–920
