

INDEX

- Adjoint
 - operators, *see* matrix operators
 - vector, 161
- Angular velocity, 58
- Anisotropic rotor, 169, 188, 203
 - weakly, 162
- Anisotropy
 - degree of, 191
 - rotor, 180
- Asymmetry
 - stiffness, 16, 79, 80
 - inertia, 77, 79, 80
- Attitude angle, 102
- Backward
 - mode, 238
 - natural frequency, 5
 - precessional mode, 63
 - synchronous circular whirl radius, 9
 - synchronous critical speed, *see* critical speed
 - whirl, 6, 10, 13, 15
 - whirl response, 15
- Balancing
 - generalized modal balancing theory, 221
 - rigid rotor, 220
 - two plane, 219
 - using influence coefficient, 215
- Bearing
 - ball, 209, 210
 - coefficients, 102
 - coefficients matrices, 125
 - damped flexible isotropic, 11
 - finite and general types of, 115
 - isotropic, 14
 - long, 112
 - π -film, 103
 - short, 103
 - 2π -film, 103
 - tilting-pad, 115
- Boundary conditions
 - adjoint, 233
 - fixed-fixed ends, 252
 - fixed-free ends, 249
 - fixed-hinged ends, 246
 - geometric, 233
 - hinged ends, 237, 241
 - homogeneous, 230
 - Reynold's, 103
 - Sommerfeld, 103
- Cantilever shaft, 254
- Centripetal acceleration, 18
- Complex displacement, 228
- Coordinate(s)
 - finite rotor element, 153
 - rotating, 16
 - transform, 131
- Coriolis acceleration, 18
- Correction unbalance, 222
 - vector, 218
- Crack
 - closed, 299, 303
 - open, 299
- Cracked rotor, 296
- Critical speed, 2, 6
 - analysis, 199, 203
 - inversion, 7
 - synchronous, 64, 66
 - torsional, 289

- Damping
 - coefficients of bearing, 108
 - Coulomb, 35
 - cross-coupled, 111
 - direct, 111
 - external, 28, 35, 74
 - internal, 35, 36, 74
 - modal, 159, 261
 - negative, 127
 - positive, 127
 - structural, 37
- Direct inversion method, 205
- Directional frequency response matrix (dFRM), 174
 - normal, 175, 176
 - reverse, 175, 176
- Disk region, 74
- Displacement method, 151
- Distributed parameter rotor-bearing system
 - biorthogonality of, 233
 - biorthonormality of, 234
 - eigenfunction of, 234
 - eigenvalue problem of, 233
 - modal analysis of, 230–235
 - modal equations of, 234
 - mode shapes of, 235–236
 - orthogonality of, 235–236
- Duty parameter, 100
- Dynamic stiffness matrix, 90
- Eccentricity ratio, 100
- Eigenvalue, 133
 - degenerate, 134
 - full degeneracy of, 137
 - generalized, 204
 - simple, 134
 - simple degeneracy of, 137
- Eigenvector, 133
 - adjoint (complex conjugate left), 157
 - generalized, 133, 137
 - right, 157
- Euler–Bernoulli rotor, 227
- Euler equation, 57
- Excitation
 - asynchronous harmonic, 203
 - synchronous harmonic, 203
- Flexural rigidity, 67, 228
- Follower torque
 - axial, 277, 278, 290
 - constant axial, 295
 - tangential, 277, 278, 290
- Form factor, 278
- Forward
 - natural frequency, 5
 - precessional frequency, 60
 - precessional mode, 63
 - synchronous circular whirl radius, 9
 - synchronous critical speed, 243, 249, 251, 253, 257, 262, 280, 288
 - synchronous whirl, 5, 64
 - whirl, 10, 11, 13
- Frequency response matrix (FRM), 173
 - classical, 178
 - directional, 174
 - partitioned block, 173
- Friction
 - internal/external, 258
- Gravity
 - loads, 2
 - response, 2, 26, 31, 34
- Growth rate of the unstable mode, 78
- Gyroscope, 57
- Gyroscopic
 - moment, 278
 - whirling, 57
- Index, *see* geometric multiplicity
- Influence coefficient matrix, 202, 217, 215
- Inner product, 231
- Instability, 111, 131
 - of simple rotor, 118
 - rotordynamic, 99
 - self-excited, 40
 - strength, 21
 - threshold speed, 118
- Isotropic
 - bearings, 14
 - journal bearing, 182

Mechanics

SOLID MECHANICS AND ITS APPLICATIONS

Series Editor: G.M.L. Gladwell

Aims and Scope of the Series

The fundamental questions arising in mechanics are: *Why?*, *How?*, and *How much?* The aim of this series is to provide lucid accounts written by authoritative researchers giving vision and insight in answering these questions on the subject of mechanics as it relates to solids. The scope of the series covers the entire spectrum of solid mechanics. Thus it includes the foundation of mechanics; variational formulations; computational mechanics; statics, kinematics and dynamics of rigid and elastic bodies; vibrations of solids and structures; dynamical systems and chaos; the theories of elasticity, plasticity and viscoelasticity; composite materials; rods, beams, shells and membranes; structural control and stability; soils, rocks and geomechanics; fracture; tribology; experimental mechanics; biomechanics and machine design.

Mechanics

FLUID MECHANICS AND ITS APPLICATIONS

Series Editor: R. Moreau

Aims and Scope of the Series

The purpose of this series is to focus on subjects in which fluid mechanics plays a fundamental role. As well as the more traditional applications of aeronautics, hydraulics, heat and mass transfer etc., books will be published dealing with topics which are currently in a state of rapid development, such as turbulence, suspensions and multiphase fluids, super and hypersonic flows and numerical modelling techniques. It is a widely held view that it is the interdisciplinary subjects that will receive intense scientific attention, bringing them to the forefront of technological advancement. Fluids have the ability to transport matter and its properties as well as transmit force, therefore fluid mechanics is a subject that is particularly open to cross fertilisation with other sciences and disciplines of engineering. The subject of fluid mechanics will be highly relevant in domains such as chemical, metallurgical, biological and ecological engineering. This series is particularly open to such new multidisciplinary domains.
