

INDEX

- abelian variety, 37, 195
- ACFA, 27, 196
- affine equational class, 208
- affine geometry, 58
- affine homomorphism, 86
- Affine Ramsey Theorem, 163
- affine space, 170
- affine type, 166
- algebraic isogeny, 41
- almost classical structure, 175
- almost locally homogeneous, 215
- almost orthogonal, 65
- amalgamation class, 158
- amalgamation problem, 75

- 1-based, 196
- basis, 17
- bilinear cover, 96
- body, 135
- boolean product, 125, 213
- boolean space, 124

- c-minimal, 41
- canonical parameter, 7
- canonical base, 9
- canonical basis, 164
- canonical embedding, 59
- canonical projective geometries, 62
- \aleph_0 -categorical, 56
- categorical variety, 139
- n -chain, 113
- Chow's Theorem, 37
- classical geometries, 169
- classical structures, 170
- classifiable, 108
- closed class of modules, 268
- combinatorial, 137
- commensurable, 41
- commensurable subgroups, 88
- commutator theory, 129, 235
- complete reducibility theorem, 37
- complete variety, 36

- complexity, 182
- congruence, 126
- connected, 15
- coordinate system, 149
- coordinatizable, 149
- coordinatization, 59
- coordinatizing structure, 66
- Coxeter functor, 267
- critical point, 182

- decidable class, 207
- deep, 108, 111
- definable isogeny, 41
- definable types, 5
- degree, 162
- depth, 108, 111
- difference fields, 195
- difference ring, 26
- dimension, 17
- dimension function, 64
- dimensional order property, 108, 109
- discriminator function, 126, 212
- discriminator term, 212
- discriminator variety, 126, 212
- dividing, 3
- dual quiver, 266
- Dynkin quivers, 264

- effective RS conjecture, 240, 247
- elimination of imaginaries, 8
- elimination of imaginaries, 60
- envelope, 64
- eventual coordinatization, 84

- fewnomials, 189
- finite basis property, 99
- finitely boolean representable variety, 125
- finitely decidable equational class, 217
- finitely homogeneous structure, 145
- finitely unstructured equational class, 217
- forking, 3

- full embedding, 59
- Fundamental Theorem of the commutator, 131
- generic, 15
- generic elements, 33
- geometrical finiteness, 70
- geometry, 17
- graded ring, 40
- Grassmannian structure, 67, 149, 162
- halting problem, 249
- hermitian space, 171
- homogeneous, 213
- n -homogeneous, 56
- homogeneous pregeometry, 17
- homogeneous structure, 145, 162
- homogeneous substructure, 162
- idempotent polynomial, 120
- imaginary elements, 7
- imprimitive, 162
- indecomposable pure-injective module, 260
- independent, 4, 17, 18
- 2-independent, 76
- induced algebra, 120
- isogenous, 38
- isogeny, 38
- Jónsson's Lemma, 128
- Jacobian, 182
- Jacobian variety, 195
- Khovanskii system, 191
- Khovanskii's theorem, 182
- Lie coordinatizable, 59
- LMS, 28
- localization, 18
- locally definable sets, 85
- locally finite equational class, 208
- locally homogeneous, 215
- locally independent, 80
- locally Lie coordinatized, 69
- locally modular, 18
- majority term, 128
- Maltsev function, 130
- Manin-Mumford conjecture, 195
- matrix power, 138
- minimal algebra, 134
- minimal set, 133
- minimal types, 16
- minimal variety, 139
- model companion, 233, 252
- modular, 84
- n -modular, 22
- modular pregeometry, 18
- modular structure, 81
- Mordell-Lang conjecture, 195
- Morse function, 187
- multitrace, 140
- neighborhood, 120
- nice family, 154
- nice pair, 153
- non-multidimensional, 79
- non-trivial failure, 113
- nonforking extension, 3
- nonquadratic linear geometry, 56
- normal tree, 110
- O'Nan-Scott Theorem, 166
- omitting types order property, 109
- one-based, 12, 14
- order property, 4
- orientation, 59
- orthogonal, 48
- orthogonal geometry, 172
- p -adic integers, 256
- pair of pp-formulas, 259
- path algebra, 262
- permutation structure, 146, 161
- persistently stable, 6
- Pfaffian chains, 181
