

## X INDEX

### A

active, 129  
additive-containing paints, 202  
agglomerates, 128  
algae, 208  
alignment, 145, 147  
anionic, 27  
anisotropic flow structure, 148  
anti-thixotropic, 35  
apparent roughness, 132  
asbestos fibres, 179, 192  
aspect ratio, 178  
association number, 28  
asymptotic friction factor, 11  
autocorrelation, 84  
Avogadro's number, 152

### B

Beltrami flow, 75, 148  
biological degradation, 216  
blades, 205  
blood pressure, 207  
Boltzmann constant, 21, 141  
Brownian motion, 22, 125  
buffer layer, 13  
    zone, 109  
bulk velocity, 8  
Burgers model, 55  
burst cycle, 145  
    period, 93

### C

capillary viscometers, 44  
cascade process, 154  
cationic, 27  
cavitation, 205  
change in energy, 72  
characteristic flow zones, 122  
circulation, 74  
clay, 206  
coalescence, 212  
coherent structures, 76, 92, 120, 122  
coil-stretch transition, 189  
concentrated, 57  
cone-and plate-viscometer, 43  
conservation laws, 70  
    of momentum, 70  
consistency, 58  
constitutive equation, 16, 54  
continuity equation, 70  
convergence fields, 124  
correlation coefficient, 83

Couette flow, 3, 40  
    viscometer, 41  
Cox-Merz-rule, 51  
critical points, 124  
Cross model, 58  
cross-section, 8

### D

d-type roughness, 131  
Deborah number, 36, 184, 189  
deformation history, 34  
    rate, 60  
degradation, 24, 194  
deviatoric stress tensor, 70  
die swell effect, 37  
dilute, 18, 57  
discharge, 8  
discs, 28  
dissipation, 154  
    mechanism, 144  
DNA molecules, 207  
dosing, 196  
drag reduction, 8  
dumb-bell model, 19  
duration of the event, 121  
dynamic shear viscosity, 34  
dynamic viscosity, 37

### E

eddies, 124  
eddy-fibre length scale, 186  
effective viscosity, 113, 119  
effectively smooth, 132  
ejections, 93, 120  
elastic constant., 19  
    dumbbell model, 189  
    ellipsoids, 23  
    limit, 142  
    rigid body, 34  
    stresses, 112  
    sublayer, 153  
    zone, 13, 101, 103  
elongated additives, 147  
elongational flows, 39  
    rate, 39  
    viscosity, 39, 145  
energy budget, 78  
    dissipation, 81, 86  
    equation, 78  
    transport equation, 78  
enstrophy, 81, 148  
    generation, 82  
entanglements, 126

environment, 191  
 equation of continuity, 77  
 equilibrium range, 90  
 extended length, 152  
 extensional, 39

**F**

Fanning's friction factor, 8  
 Fano-flow, 46  
 fibre suspensions, 215  
 fibre-like flow regime, 183  
 fibre/polymer mixture, 185  
 fibrous suspensions, 178  
 finite extensibility, 22  
 fixed costs, 191  
 flatness, 117  
   factor, 87  
 Flory radius., 21  
 flow rate, 8  
 food production, 214  
 four quadrants, 115  
 fourth moment, 87  
 fractional slip, 132  
 friction factor, 8, 101  
 fully turbulent region, 180

**G**

global friction factor, 19  
 globular, 28

**H**

hairpin vortices, 146  
 head-group, 27  
 heat transfer, 190  
 heating systems, 200  
 helicity, 75  
   density, 75, 150  
 heterogeneous drag reduction, 126, 127  
   solutions, 127  
 higher moments, 117  
 Hooke's Law, 34  
 Hookean solid, 34  
 hydrodynamic frequency, 140  
   radius, 18  
 hydrofoil, 203  
 hydrophilic, 27  
 hydrophobic, 27  
 hydrotransport, 204

**I**

incompressible liquids, 70  
 inertial subrange, 91  
 inextensible flexible thread, 23

integral scales, 84  
 intensity of an event, 121  
 interparticle separation, 152  
 intrinsic slope increment, 103  
   viscosity, 48  
 irrigation, 208  
 isolated, 126  
 isotropic, 114  
   assumption, 98  
 isotropy, 114, 148

**J**

Jeffrey fluid, 56  
   orbits, 184  
 jet-like, 124  
 joint probabilities, 88  
   probability density function, 113

**K**

Kelvin model, 55  
 kinematic approach, 122  
   viscosity, 10, 72  
 Kolmogorov scale, 86, 149  
   time scale, 87  
   velocity, 90  
 kurtosis, 87, 117

**L**

Lamb-vector, 149  
 lateral, 83  
   length scale, 84  
   micro scale, 86  
 law of the wall, 101  
 length scale ratio, 138  
 local isotropy, 90  
   micro flow fields, 122  
 logarithmic layer, 13  
   profile, 101  
 longitudinal, 83  
   micro scale, 86  
   length scale, 84  
   vortices, 93  
 loss modulus, 37

**M**

macromolecule contour length, 152  
 maintenance, 191  
 Mark-Houwink exponent, 48  
 maximum drag reduction asymptote, 101  
 MDR asymptote, 7  
 Maxwell model, 55  
 mean rate of strain, 79  
   velocity, 153  
 micelles, 28, 157

micro bubbles, 189, 203  
 micro-length scale, 86  
 micro-time scale, 85  
 mixed flow region, 180  
 mixing length concept, 120  
   length constant, 103  
 molecular weight, 17  
 monodisperse, 26, 126  
 monomer size, 21  
 monomeric, 17  
 motion of vorticity, 73

**N**

Navier-Stokes equation, 70, 71, 77  
 Newton's Law, 34  
 Newtonian fluid, 34  
 Newtonian fluids, 4  
   plug, 103  
 no-slip condition, 74  
 noise, 205  
 nonionic, 27  
 normal stress difference, 39  
   stresses, 38  
 number concentration, 126  
   density, 18

**O**

onset, 101, 153  
   constant, 102  
   phenomenon, 6  
   point, 151  
   value, 101  
   wall shear stress, 102  
 Ostwald-de-Waele fluid, 58  
 over-structures, 30  
 overall production modul, 146  
 overlap concentration, 57

**P**

paper pulp, 175  
 parallel-plate viscometer, 43  
 percent drag reduction, 9  
 phase volume, 65  
 plug flow, 180  
 Poisson solution, 78  
 polydisperse, 26  
 polyelectrolytes, 27  
 polymer aggregates, 127  
   solutions, 215  
 power spectral density, 90  
   spectrum, 89, 117  
 power-law index, 58  
 power-law-fluid, 58

Prandtl-Karman coordinates, 101  
   law, 101  
 preshearing effect, 134  
 pressure drop, 9  
   fluctuations, 109  
   loss, 101  
 propellers, 205  
 pumping station, 195

**Q**

$\theta$ -solvent, 48

**R**

Rabinowitsch correction, 44  
 radius of gyration, 18  
 rate of dissipation, 72  
 reduced viscosity, 47  
 reflection, 121  
 relative viscosity, 47  
 relaxation time, 20, 36, 125, 127, 138  
 retro-onset, 8, 104, 106, 151  
 Reynolds equation, 77  
   stress deficit, 112  
   stress tensor, 77  
 rheological behaviour, 16  
 rheology, 16  
 rheopectic, 35  
 riblets, 203  
 rigidity modulus, 34  
 rod-like, 28  
 rotation tensor, 60  
 roughness elements, 132

**S**

sand roughnesses, 131  
   suspensions, 175  
 second critical concentration, 30  
   moment, 87  
 sediment transport, 206  
 semi-dilute, 57  
 separation process, 192  
 sewer channel, 206  
 shear induced state, 158  
   layers, 124  
   rate, 34  
   stress, 34, 38  
   thinning, 35, 61, 105, 159  
   thickening, 35  
 ship hull, 202  
 skewness, 87, 117  
 skin friction, 8  
 slime, 207  
 slope increment, 13, 101, 102, 151  
 small-angle-neutron-scattering, 157

solvent density, 152  
   viscosity, 20  
 space correlation, 83  
 space-time correlation, 84, 88  
 spectrum of dissipation, 91  
 spongy ball, 19  
 spotty interaction, 95  
 storage modulus, 37, 142  
 strain, 33  
   rate, 34, 60, 79  
 streaky pattern, 122  
 streaming, 124  
 stretched, 145  
 stretching limit, 142  
 structure of turbulence, 16  
 surfactant solutions, 215  
 surfactant-stabilized emulsion, 189  
 sweeps, 93, 120

## T

Taylor micro scale, 86, 149  
 Taylor's hypothesis., 84  
   series, 85  
 tension-thickening, 40  
 tension-thinning, 40  
 third moment, 87  
 thixotropic, 35  
 three-dimensional Fourier transform, 88  
   wave number vector, 88  
 threshold concentration, 143  
 time correlation, 84  
   probability density, 115  
   scale ratio, 138  
 topological aspects, 122  
 towing tank, 203  
 transition concentration, 30  
 Trouton ratio, 40, 71  
 turbulence intensity, 109  
   production, 79, 144, 154  
 two-dimensional, 148  
 two-loci method, 106  
 type A drag reduction, 150  
 type B drag reduction, 150

## U

universal velocity profile, 13  
 unsteadiness, 97  
 up-scaling problem, 106

## V

valves, 205  
 vapor pressure, 205  
 variable costs, 191  
 variance, 87  
 velocity fluctuation, 97  
 Virk's MDR asymptote, 11  
   ultimate profile, 13, 101, 128  
 viscoelastic fluid, 4, 34  
   solid, 34  
 viscometer, 40  
 viscosity, 34  
 viscous dissipation, 79  
   forces, 73  
   sublayer, 13, 101, 121  
 volume fraction, 47  
 von Karman constant, 181  
 vortex stretching, 74  
 vorticity, 73  
   equation, 75  
 vortons, 124

## W

wall coordinates, 10  
   shear stress, 8  
 wave number spectral density, 88  
   range, 186  
 Weissenberg effect, 4

## X

Xanthan gum solutions, 106

## Z

zero-shear viscosity, 48, 57  
 Zimm expression, 21  
   relaxation rate, 140

## FLUID MECHANICS AND ITS APPLICATIONS

Series Editor: R. Moreau

### Aims and Scope of the Series

The purpose of this series is to focus on subjects in which fluid mechanics plays a fundamental role. As well as the more traditional applications of aeronautics, hydraulics, heat and mass transfer etc., books will be published dealing with topics which are currently in a state of rapid development, such as turbulence, suspensions and multiphase fluids, super and hypersonic flows and numerical modelling techniques. It is a widely held view that it is the interdisciplinary subjects that will receive intense scientific attention, bringing them to the forefront of technological advancement. Fluids have the ability to transport matter and its properties as well as transmit force, therefore fluid mechanics is a subject that is particularly open to cross fertilisation with other sciences and disciplines of engineering. The subject of fluid mechanics will be highly relevant in domains such as chemical, metallurgical, biological and ecological engineering. This series is particularly open to such new multidisciplinary domains.

1. M. Lesieur: *Turbulence in Fluids*. 2nd rev. ed., 1990 ISBN 0-7923-0645-7
2. O. Métais and M. Lesieur (eds.): *Turbulence and Coherent Structures*. 1991 ISBN 0-7923-0646-5
3. R. Moreau: *Magnetohydrodynamics*. 1990 ISBN 0-7923-0937-5
4. E. Coustols (ed.): *Turbulence Control by Passive Means*. 1990 ISBN 0-7923-1020-9
