Index

Above threshold
dissociation, 105, 109
ionization, 78-80, 105
 Angle-differential spin-polarization parameters, 46-48
 Angle-differential Stokes parameters, 43-46
 Angle-integrated cross sections, 39, 40
 Angle-integrated Stokes parameters, 41-43
 Anisotropic molecular ensembles, 144-149
 Atomic
collisions, JET applications of, 225-247
collisions, in plasma transport modelling, 227
collisions, in spectral diagnostics, 233
and molecular collision theory, fifty years of, 1-7
physics of muon-catalyzed fusion, 269-278
processes, 250, 251
Atoms in intense laser fields, 77-103
BERTHA, 4-component relativistic molecular quantum mechanics program, 213-224
Basic Linear Algebra Subprograms (BLAS), 125
Beam stopping coefficients for a neutral deuterium beam, 242
Bloch operator, theorem, 187, 188
Born approximation, 4, 160
first order for the Ps formation amplitude in hydrogen, 166
Born-Ochkur approximation, 5
Born-Oppenheimer approximation, 4
Breit interaction, interaction integrals, 219
Charge exchange
cross section, 244
Charge exchange (cont.)
heavy particle, 168
spectroscopy, 243
Chemically peculiar stars (CP), 262
Chiral molecules, elastic electron collisions with, 137-153
Close coupling approach, 5, 15, 21, 71, 226
convergent (CCC), 16, 37, 38
Floquet (FCC), 90
hyperspherical (HSCC), 21, 273
pseudostate (PSCC), 21
Collision theory, fifty years of atomic and molecular, 1-7
Collisions of electrons with atoms and molecules: see also Electron-impact excitation, ionization
e⁻-He, total cross section, 157
elastic e-Cs collisions, 47, 48
elastic electron collisions with chiral and oriented molecules, 137-153
laser-assisted electron-atom collisions, 83, 84
Collisions of positrons with atoms and molecules: see also Positron

\text{e}^{+}-\text{H}(1s)\ collisions, total Ps formation cross section, 162
\text{e}^{+}-\text{He} scattering, total cross section, 157
Ps formation, 155, 173-175
Continuity equation, 255-257
Continuum distorted wave approximation (CDW), 168
Continuum multiple scattering method, 139
Convergent close coupling: see Close coupling approach
Coronal picture, 226
Coulomb barrier in thermonuclear fusion, 271
Coulomb explosion model, field ionization, 106
Coulomb interaction integrals, 219

279
Coupled channel calculations with a hyperspherical basis, 165, 166
two-centre models, 157
Coupled equation method, 161
Cross section: see also Angle-integrated cross sections, Charge exchange, Differential cross section, Differential ionization cross section, Direct ionization, Electron-impact, Photoionization cross section, Positronium, Rosseland mean, Singly differential cross section, Total cross section and Triply differential cross section
for e⁺-H(1s) scattering, 156
for e⁻+H₂ Σ⁺, 69
for e⁺+Li⁰ scattering, 73
for ionization of H(1s) by e⁺ impact, 162

Desorption induced by electronic transitions (DIET), 205
Detachment rates, total and partial RMF of H⁻, 93
Deuterium, 230, 241, 243
Diabatic potentials and scattering resonances, 57
Differential cross section, 139, 148, 151, 193, 194: see also Singly differential cross section, Triply differential cross section
spin-averaged differential cross section of NiO(001), 194
Differential ionization cross section, 22
Diffusion, 254
Dipole dissociation (DD), 206
Dirac
equation for a central potential, 215
equation for a stationary state, 215
probability density, 98
Direct ionization, 175-178
cross sections for He and Kr, 176
Direct methods for sparse matrices, 122
parallelization of, 127
Dissociation of negative ion resonance (NIR) to neutral fragments: CH₃Cl/Graphite, 207
Dissociative electron attachment (DEA), 197, 208

Dissociative ionization, manipulating the process, 108
Distorted wave approaches, 5: see also CDW, RDW
Effective emission coefficients, 244
Electron attachment to optically excited molecules: O₂ and CO / Graphite, 233
Electron capture to the continuum (ECC), 177
Electron correlation, 219
Electron stimulated desorption, 207
ion angular distributions (ESDIAD), 198
Electron-atom collisions, laser assisted, 83, 90
scattering, by argon atoms in the presence of a C₂O₂ laser, 83
hydrogen, 10, 16
krypton, 12, 13
lithium, 18
recent progress in, 15-31
resonances, 9-14
Electron-impact cross section, 250
e-H scattering, 24, 25
excitation
of atoms, benchmark studies in, 33-50
of barium, 21
of helium, 20, 39-41
of hydrogen, 16, 17
of krypton, 43, 46, 47
of lithium, 18
of mercury, 46
of neon, 42
of sodium, 19, 45
of xenon, 36, 37
ionization
of helium, 26-29
of hydrogen, 17
rate coefficient, 250
Electron-ozone scattering, 51-66
Embedding
calculations of surface electronic structure, 188-190
Embedding (cont.)
method, 184-188
method for quantum confinement, 190-
192
potential, 186
and R-matrix methods at surfaces,
183-195
Energy loss spectra; see HREELS
electron (EELS), 53, 200, 204
from co-adsorbed K and O₂ on graphite,
204
for helium, 11
from physisorbed O₂, 200
R-matrix study of EELS from NiO,
192-195
Exact static exchange approximation (ESE),
54
Experiment
magnetic angle changing technique,
12
observation of electron-atom resonances,
9-14
poloidal section of JET, 229
pump-probe, 114
to perform scattered-electron-polarized-
photon coincidence studies, 34
Feshbach formalism, 71
Floquet
close-coupling, 90
Lipmann - Schwinger equation, 90
R-matrix-Floquet theory (RMF), 91-
94
theory, 86-91
Fully oriented molecules
CHBrCIF, 144-146
HBr, 140, 141
H₂S₂, 140, 142, 143
numerical procedure and results for,
35-40, 45
Fusion
intramolecular, 270-272
muon-catalyzed, atomic physics of,
269-278
rate, 272
thermonuclear, 270
G-spinors, 217
Gaussian
elimination, 123, 127
Gaussian (cont.)
functions, 159
Green’s
functions, 74, 160, 185-187
theorem, 184
Harmonic
emission spectra of various noble gases,
81
generation, 81-83
Hartree-Fock, 5, 18, 54
Harwell
- Boeing sparse matrix collection, 119,
126
subroutine library, 133
High resolution electron energy loss spec-
troscopy (HREELS), 197, 208
Hyperfine transitions, 274, 275
Hyperspherical close-coupling (HSCC),
21, 273
Hyperspherical basis, coupled channel cal-
culations, 165
Integro-differential equations, 159
Intermediate Energy R-Matrix (IERM),
16, 17, 21, 39, 71
Intramolecular fusion, 270-272
Iterative methods, sparse matrices, 128
parallelization of, 130
Jacobi
block method, 131
co-ordinates, 158, 165, 273
Joint European Torus (JET), 225-247
light impurity simulation, 238
measurements on molecules, 240
measuring beam attenuation, 242
measuring electron temperature and
density, 236
measuring impurity concentrations,
243
measuring impurity influx, 233
neutral helium beams, 245
poloidal section, 229
Keldysch adiabaticity parameter, 79
Kohn method, 70, 72, 74
Laser-assisted electron-atom collisions, 83,
84
Laser-atom interactions, relativistic effects in, 97-99

Laser fields
bichromatic, 94
intense, 77-103, 105-118

Laser-induced
alignment, 106, 112
charge-asymmetry, 106, 109
degenerate states (LIDS), 94
dissociation, 106, 109
fluorescent emission, 233
orientation, 106
stabilization, 106, 111
trapping, 106

Level populations, 250

Light-induced
continuum structures (LICS), 94
states (LIS), 90

Line
profiles, 265
ratios for HeI, 236
saturation, 253

Liquid hydrogen density (LHD), 270, 274
Lorentz profile, 250
LU factorization, 124

Markowitz threshold pivoting, 124
Matrix methods, 119-136

Model adiabatic potential, 52
to study shapes and locations of single particle resonances, 51-66

Molecules: see also Anisotropic molecular ensembles, BERTHA, Chiral molecules, Collision theory, Collisions of electrons with atoms and molecules, Collisions of positrons with atoms and molecules, Electron attachment to optically excited molecules, Electron scattering by small molecules, Fully oriented molecules, Joint European Torus, Negative ion resonance, Oriented molecules, Partially oriented molecules and Randomly oriented molecules on surfaces, negative ion resonance (NIR) of, 197-211

Multiconfiguration Hartree-Fock, 5
Multielectron dissociative ionization (MEDI), 105, 108

Multiphoton
ionization, 78-80
processes in atoms and ions, 78-84

Muon-catalyzed fusion, atomic physics of, 269-278
corrections on the energies of muonic molecules, 275
dynamic processes involving muonic atoms, 273
mechanism, 269
muon transfer process, 273

Negative ion resonance (NIR), 54, 197-211
dissociation of, to neutral fragments: CH₃Cl / Graphite, 207
electron scattering by O₂ co-adsorbed with K on graphite, 202
favourability, 271
of molecules on surfaces, from spectroscopy to dynamics, 197-211
scattering by physisorbed O₂ on Ag(110), 199

Neutral beam induced emission, 233

Onion skin model, 231
Opacity project, 5, 249
Optical depth, Rosseland mean, 256
Oriented molecules, elastic electron collisions with chiral and, 137-153
Ozone, electron scattering, 51-66

Partially oriented molecules, collisions with, 144
Photoionization cross section of Be, 75
Photon stimulated desorption (PSD), 205
Plasma transport modelling, 227
Positron
atom/molecule collisions, 174
impact ionization, 177
scattering by atoms, 155-170
to positronium scattering, 171-182

Positronium
beam and scattering, 178-180
formation, 162-168, 173-175
scattering cross section for He and H, 179
Proton emission, 116
Pump-probe experiment, 114
Quantum confinement, embedding method for, 190-192
Quantum electro-dynamics (QED), coupling of the electron and photon fields in relativistic QED, 217

R-matrix, 6, 23, 39, 68, 74, 160, 161, 183-195
and embedding methods at surfaces, 183-195
embedding and R-matrix theory, 186-188
Floquet theory (RMF), 91-94
intermediate energy (IERM), 16, 39, 71
study of electron energy loss spectroscopy from NiO, 192-195
with pseudostates (RMPS), 17, 26, 38, 39, 71
without a box, 73-76
Radiation power loss functions, 227, 239
Radiation pressure and element diffusion in stellar interiors, 249-267
Radiative acceleration, calculation of, 252, 253
flux, 251, 252
power function for argon, 228
transfer equation, 252
Randomly oriented molecules, numerical procedure and results for fully oriented and, 139-144: see also Fully oriented molecules
Recollision model, 80, 82
Relativistic distorted wave approximation (RDW), 21
Relativistic effects in laser-atom interactions, 97-99
Resonances
electron-atom, 9-14
scattering, 57
single particle, 51-66
Resonant scattering from ozone, 56
Ricatti-Bessel function, 74
Rosseland mean
cross section, 252
optical depth, 256
Schrödinger equation, 72, 273
time-dependent, 84, 91
numerical solution of 95-97
Schrödinger probability density, 98
Singly differential cross sections, 26
Sparse matrices, 119-136
application areas, 120
diagonalization, 132
direct methods, 122
frontal and multifrontal methods, 126
iterative methods, 128
preconditioning, 129
Spectra: see also Energy loss spectra, High resolution electron energy loss spectroscopy, Time-of-flight spectra
electron energy spectra showing ATI of xenon, 98
energy spectrum of electrons scattered by argon atoms in the presence of a CO2 laser, 83
observed spectra of the 4850-5100 Å region, 240
plate spectrum from ZETA 1A in the quartz ultraviolet, 226
spectrum lines of helium and carbon ions, 233
Spectral analysis of
beam penetrated plasma, 241
divertor plasma, 233
Static exchange approximation, elastic e− + H2 scattering, 69
Stellar interiors, radiation pressure and element diffusion in, 249-267
Steric factors, 148
Sticking probability, 272
Stokes parameters, 34-36: see also Angle-differential Stokes parameters, Angle-integrated Stokes parameters
Sturmian functions, 158
Sturmin-Floquet method, 87
Supernova, SN 1987a, 6
Surfaces
embedding and R-matrix methods at surfaces, 183-195
embedding calculations of surface electronic structure, 188-190
T-matrix, 22-24, 38, 75, 91, 192-194
Tempkin-Poet model of e-H scattering, 23-25
Thermonuclear fusion, 270
Threshold intensities, 108, 110, 113
Time-dependent Schrödinger equation, 84, 91
numerical solution of, 95-97
Time-independent, coupled differential
equations, 87
Time-of-flight (TOF), spectra, 105, 108
$H_2$ TOF spectra, 115
$^{18}_2$ fragments in the $I_2$ TOF spectra, 112
Total cross section, 193
for $e^+\text{-He}$ and $e^-\text{-He}$ scattering, 157
for $e^+\text{-He}$ scattering, 165
for $e^\pm\text{-He}$ scattering, 172
for $e^+\text{+He}(1s^2) \rightarrow Ps (n=1)+He^+(1s)$, 168
for $e^+\text{-Na}$ scattering, 164
for $e^+\text{-Rb}$ scattering, 172
Ps formation for $e^+\text{-H}(1s)$ collisions, 162
for two states in $e^-\text{-}F_2$ scattering, excitation cross section, 252
Total ionization rate versus intensity for
$H(1s)$ in a laser field, 89
Transition amplitude for inelastic scattering, 194
Transverse photon interaction, 219
Triply differential cross section for $e^\pm\text{-H}_2$, 177
Two-centre coupled channel models, 157-165

Wannier threshold law, 176
Series Publications

Below is a chronological listing of all the published volumes in the *Physics of Atoms and Molecules* series.

**ELECTRON AND PHOTON INTERACTIONS WITH ATOMS**
Edited by H. Kleinpopper and M. R. C. McDowell

**ATOM–MOLECULE COLLISION THEORY: A Guide for the Experimentalist**
Edited by Richard B. Bernstein

**COHERENCE AND CORRELATION IN ATOMIC COLLISIONS**
Edited by H. Kleinpoppen and J. F. Williams

**VARIATIONAL METHODS IN ELECTRON–ATOM SCATTERING THEORY**
R. K. Nesbet

**DENSITY MATRIX THEORY AND APPLICATIONS**
Karl Blum

**INNER–SHELL AND X-RAYS PHYSICS OF ATOMS AND SOLIDS**
Edited by Derek J. Fabian, Hans Kleinpoppen, and Lewis M. Watson

**INTRODUCTION TO THE THEORY OF LASER–ATOM INTERACTIONS**
Marvin H. Mittleman

**ATOMS IN ASTrophysics**
Edited by P. G. Burke, W. B. Eissner, D. G. Hummer, and I. C. Percival

**ELECTRON–ATOM AND ELECTRON–MOLECULE COLLISIONS**
Edited by Juergen Hinze

**ELECTRON–MOLECULE COLLISIONS**
Edited by Isao Shimamura and Kazuo Takayanagi

**ISOTOPE SHIFTS IN ATOMIC SPECTRA**
W. H. King

**AUTOIONIZATION: Recent Developments and Applications**
Edited by Aaron Temkin

**ATOMIC INNER–SHELL PHYSICS**
Edited by Barnd Crasemann

**COLLISIONS OF ELECTRONS WITH ATOMS AND MOLECULES**
G. P. Drukarev
PHOTON AND ELECTRON COLLISIONS WITH ATOMS AND MOLECULES
Edited by Philip G. Burke and Charles J. Joachain

COINCIDENCE STUDIES OF ELECTRON AND PHOTON IMPACT IONIZATION
Edited by Colm T. Whelan and H. R. J. Walters

PRACTICAL SPECTROSCOPY OF HIGH-FREQUENCY DISCHARGES
Sergei A. Kazantsev, Vyacheslav K. Khutorskikhov, Günter H. Guthöhrlein, and Laurentius Windholz

IMPACT SPECTROPOLARIMETRIC SENSING
S. A. Kazantsev, A. G. Petrashen, and N. M. Firstova

ELECTRON MOMENTUM SPECTROSCOPY
Erich Weigold and Ian McCarthy

SUPERCOMPUTING, COLLISION PROCESSES, AND APPLICATIONS
Edited by Bell, Berrington, Crothers, Hibbert, and Taylor
