as occupational disorder cause, 375, 376
prevalence of, 375
Social Security Act, 12
physicians’ familiarity with, 8
Social Security Administration
disability benefits expenditures by, 16
disability definition of, 118
Social Security Disability Insurance (SSDI)
benefits, 233, 238
for fibromyalgia patients, 223
malingering and, 422
as return to work deterrent, 246
Social support
caregivers as, 133
effect on disability prevalence and duration, 39
low
as chronic low back pain risk factor, 495
as disability risk factor, 335
from physicians, 454
as posttraumatic stress disorder predictive factor, 349
in the workplace
from coworkers, 77
effect on return-to-work rates, 98
Socioeconomic risk factors, for disability,  “black flag” concept of, 191, 394, 401–402, 484

Socioeconomic status
low
as chronic daily headache risk factor, 261, 262
as traumatic brain injury risk factor, 283
relationship with psychiatric disability, 372, 380

Sociomedical model, of disability, 126–127, 135

Somatic syndromes, functional, 405, 407
Somatization, 122, 232
as abnormal illness behavior, 428
comorbidity with posttraumatic stress disorder, 330
definition of, 428

Somatoform disorders, 122
acute/subacute low back pain-associated, 492
relationship with childhood abuse, 156
South African Security Force, 335
SPICE system, for work disability reduction, 20
Spinal cord injury, gender differences in risk for, 283

Spinal disorder patients, functional restoration programs for, 244
Spinal pain patients, “at risk,” early interventions with, 464–478
behavior change strategies, 471–472
cognitive-behavioral therapy, 470–473, 475
eye screening interventions, 465–468, 475
target behavior identification in, 467–468
effectiveness of, 472–473, 475
during first consultations, 468, 469–470, 475
individualized interventions, 473–474, 475
Spine, range-of-motion measurement in, 147
Spirituality, 132
Spouse, death of, as headache risk factor, 261–262
Sprains, as occupational injuries, 151
Stages of Change Model, 528
of chronic pain treatment, 160–162
