Ala, cheek and upper lip reconstruction
advantages, 529–530
basal cell carcinoma patient
auricular cartilage framework graft, 528, 529
contouring procedure, 528–529
cutaneous advancement flap, 527–528
forehead flap, caudal border suture, 528, 530
full-thickness loss, medial cheek and upper lip, 527
interpolated paramedian forehead flap, 528, 529
ipsilateral septal mucoperichondrial hinge flap, 528, 529
nostril, asymmetry, 531
pedicle, forehead flap, 528, 530
scar revisions, 529
synchium, contouring procedure and excision, 529
Z-plasties, 529
full-thickness defects, 531
independent covering flaps, 530
nostril, reconstructed, 530, 531
Alar cartilage graft
technique, 111
trimming, 110–111
Ala reconstruction
alar-facial sulcus and groove deformation, 266–267
cheek flaps, 265
cutaneous pedicle cheek flap
advantage, 284, 286
alar-facial sulcus, 286, 301–303
collateral vascularity, 282
contraction, 282, 299–300
description, 280
disadvantage, 286, 287
males, alar groove, 287, 304
nostril margin, 284
peninsular/island flap, 280
template orientation, 280, 297–299
V-shaped wound closure, 283, 299
island cutaneous transposition flap, 265
melolabial transposition flap, 265
resurfacing, 268
subcutaneous tissue pedicle cheek flap
alar unit template, 271–272
bipedicled vestibular skin advancement flap, 269–271
cartilage graft, 269
chronic sutures, 273
continued excision, 277–278
contouring procedure, 281–284
cutaneous suture, 272–273
dental roll, 278
excision, cartilage, 277, 292–294
full-thickness defects, 268
groove creation, 275
horizontal mattress 5-0 polydioxanone suture, 269–270
incision, 276–277
island transposition cutaneous flap, 272
patency improvement, 294–295
pedicle division and flap inset, 273–275
perioperative prophylactic antibiotics, 280
preoperative and postoperative view, reconstruction, 290–291
release, flap, 274
septal cartilage, 268–269
septal mucoperichondrial hinge flap, 268
skin and soft tissue defect, 278–280
superior border, 276
surgical stages, ala reconstruction, 285–289
tracing, 272
wound margins, approximation, 274, 285
Anatomy
aesthetic units, 13–15

tip
cap, 59, 62
shield, 58–59, 62
Cranial bone graft
anatomy
cortical and diploic layer, 121
midline sagittal suture, 121
complications, 124
harvesting technique
anesthesia, 121
cranial, segments, 123–124
saw blade, 122–123
self-retaining retractors, 121–122
vault, 124, 125
D
Delayed skin grafting
cutaneous flap, 71–72
granulation tissue, 71
Dermabrasion
coarse-grade drywall sandpaper, 407, 408
diamond-studded fraises, 406–408
epithelialization, 408
local anesthesia, 405–406
nasal tip, full-thickness skin graft, 406, 407
nerve blocks, 406
ointment/hydrocolloid dressing, 408
papillary dermis, 403
powered, 407–408
skin texture and color discrepancies, 405–406
spot, traumatic scars, 408
step-off deformities, scar margin, 403–405
wounds, 408
Dorsal cutaneous flaps
caudal and midnasal skin defects, 182
disadvantage, 185
glabellar donor site, 185, 186–187
heminasal, 185, 190
midline skin defects, cephalic dorsum, 185, 189
pivotal, 182, 185
reduction rhinoplasty, 185, 189
redundancy, reduction rhinoplasty, 185, 189, 193–194
redundant, 182
rhinion, 185, 191–192
standing cutaneous deformity (SCD), 188

E
External covering
composite graft, 75
defect preparation
aesthetic units, 67
curvilinear, 69
hemi-tip cutaneous, 69–70, 72–74
medial ala and lateral tip, skin, 69–71
skin, 67–68
soft tissue, 68–69
delayed skin grafting
cutaneous flap, 71–72
granulation tissue, 71
facial reconstruction, 65
healing, secondary intention, 71, 78
interpolated melolabial flap
ala defects, 68–70, 82
subcutaneous tissue pedicled, 82, 89–90
interpolated paramedian forehead flap
cutaneous defects, 83, 94–100
forehead skin, 83–84
tip skin and soft-tissue defect, 83, 91–94
microsurgical flaps, 67
midfacial defects, 67, 68
nasal cutaneous flaps
bilobe pivotal, 78–79, 84–85
dorsal, 81, 88
and soft-tissue defects, 75
suture, clamp, 79–80, 85–87

mucosal lining flaps, 547, 551
paramedian forehead flap, 549–550
scar tissue and placement, 552
septal chondromucosal pivotal flap, 547
septal incisions, 548
size, left nostril vs. right nostril, 553–557
thickness defect, 547–548
tilt-out composite septal flap, 556
Tip, dorsum, sidewalls and ala reconstruction
alar groove, restoring, 476
basal cell carcinoma patient, 473, 474
bilateral partial nasal obstruction, 474–475
Burow’s triangle, 474, 477
contouring procedure, 478
epidermolysis, 473
flap contouring, 474, 477
grafts, 473
hair-bearing portion, flap, 473
lateral crural strut grafts, 476, 478
Mohs surgery and nasal defect, 473, 475
nasal obstruction, 475
oblique angled paramedian forehead flap, 473, 475
scalp skin and, 479
scar tissue, 475–476
spreader grafts, 478
strut grafts, 475
vellus hair, 479
Z-plasties, 475

V
Volkmann’s procedure, 8
V-shaped wound closure, 283, 299
V-to-Y island subcutaneous tissue pedicle advancement flaps
advantages, 178
color and texture match, 178, 181
disadvantage, 178, 182
muscle and fat, 178
nostril elevation, wound healing, 182, 183
sidewall and dorsum, cutaneous defects, 182, 184
skin defects, tip and ala, 178–179

W
Woodson elevator, 217, 268
Wound care instructions, 27

Z
Z-plasty. See also Refinement techniques; Skin grafts
cephalic border, flap, 479
hypertrophic scar treatment, 449
notch repair, 291
position alignment, eyebrow, 489
scar revision
description, 399
designing, 402
distorted nostril correction, 402
trapdoor deformity, 402, 403
transition, forehead and nasal skin, 475, 478, 573
