Abdominal linea alba, 201
Abdominal rectal muscle, 199, 201
Abdominal vessels
aorta, iliac arteries and viscera, injury to, 10–12
damage to deep, 3–7
trocar placement recommendations, 7–10
Abdominal wall
anatomy, 1–3
abdominal linea alba, 201
anterior abdominal muscles, 201
aponeurosis, 199
arculate line, 200
Camper’s fascia, 198, 200
layers of, 198
normal umbilical anatomical region, 198, 199
superficial umbilical layers, 200
aorta, iliac arteries and viscera, injury to, 10–12
deep abdominal vessels damage, 3–7
preperitoneal insufflation, 13–14
superficial vessels of, 2
trocar placement recommendations, 7–10
AirSeal, 151–152
Anatomy
abdominal wall, 1–3
vagina, 14–15
Angled and articulating instruments
RealHand technology, 154
Roticulator, 152–153
S-PORTAL curved instruments, 152, 153
Aponeurosis, 199
Appendectomy, GLISHS for, 189–190
Aspiration test, 242, 243
Automated endoscopic system for optimal positioning (AESOP), 240

B
Benign gynecological disease, 113–114
Bladder and ureter injuries, 264–266
Bladed optical trocars, 69
Bladeless optical trocar, 69–73
Blind Veress needle entry, 202–207
Bowel lesions, 256–257, 259–264

C
Cervical cancer, robotic surgery in fertility-sparing surgery, 127
laparoscopy vs. laparotomy, 125–127
Colposacropexy, 110–111
Colpotomy, 298–299
Culdolaparoscopy, 301

D
da Vinci surgical system, 241
components of, 241
patient cart, docking of, 122–123
port placement procedure, 123–125
surgeon’s console, 120–122
Direct optical access
abdominal entry technique
intraumbilical incision, 86–90
visualizing all abdominal layers, 85
zero-degree laparoscope, 86
abdominal entry visualizing systems, 92–94
advantages of, 92–93
complications, 79–80
published experiences on, 91–92
umbilical incision and entry
entry-related complications, 84–85
Langer principle, 81
left upper quadrant technique, 82
patient position, 82
PUGSI test, 83
Veress needle placement, 82–83
visceral slide test, 83
waggle test, 81
Z technique, 81
Direct trocar insertion technique
abdominal access, 208–211
gasless abdominal access, 28–29
using optical viewing trocar
advantages, 75–76
bladeless optical trocars, 69–73
complications, 73–75
optical trocar, variations, 72
trocars, 69
without pneumoperitoneum creation, 68–69

E
ENDOCONE, 144–146
Endometrial cancer, robotic surgery in
laparoscopy vs. laparotomy, 127–128
in morbidly obese patient, 128
Endopath optical trocar, 217, 218
Endoscopy, 33

F
Fascia transversalis, 198
Fertility-sparing surgery, 127

G
Gas-less laparoscopic inspection and single
hole surgery (GLISHS)
appendectomy, 189–190
concept, 179–182
devices, 176
GasLup system, 177–179
history of, 176–177
meaning of, 174
modified open laparoscopy technique, 183
myomectomy, 186–188
operating room and patient positioning, 182
ovarian cystectomy by, 183–184
physiological changes, 174
technical advantages of, 175
tubal pregnancy treatment, 184–186
tubal sterilization, 186
GasLup system, 177–179
GelPOINT port system, 146–148
GLISHS. See Gas-less laparoscopic inspection
and single hole surgery (GLISHS)
Gynecological oncology, robotic surgery in
background, 119
cervical cancer
fertility-sparing surgery, 127
laparoscopy vs. laparotomy, 125–127
