PARTICIPANTS

P. D. Agarwal
Research Laboratories, GMC

W. G. Agnew
Research Laboratories, GMC

W. R. Aiman
Research Laboratories, GMC

C. A. Amann
Research Laboratories, GMC

W. S. Anderson
U. S. Army Tank-Automotive Center
Warren, Michigan

C. E. Angell
Rochester Products Division, GMC

D. W. Bahr
General Electric Company
Cincinnati, Ohio

W. Bartok
Esso Research and Engineering
Linden, New Jersey

E. K. Bastress
Northern Research and Engineering Corp.
Cambridge, Massachusetts

S. E. Beacom
Research Laboratories, GMC

J. M. Beér
University of Sheffield
Sheffield, England

A. H. Bell
Engineering Staff, GMC

J. E. Bennethum
Research Laboratories, GMC

J. W. Bjerklie
Mechanical Technology Incorporated
Latham, New York

C. T. Bowman
United Aircraft Research Laboratories
East Hartford, Connecticut

F. V. Bracco
Princeton University
Princeton, New Jersey

B. P. Breen
KVB Engineering, Inc.
Tustin, California

R. S. Brokaw
NASA-Lewis Research Center
Cleveland, Ohio

W. G. Burwell
United Aircraft Research Laboratories
East Hartford, Connecticut

A. V. Butterworth
Research Laboratories, GMC

J. D. Caplan
Research Laboratories, GMC

L. S. Caretto
Imperial College of Science and Technology
London, England

P. F. Chenea
Research Laboratories, GMC

D. E. Cole
University of Michigan
Ann Arbor, Michigan

E. N. Cole
General Motors Corporation
ATTENDANCE LIST

J. S. Collman  
Research Laboratories, GMC

J. M. Colucci  
Research Laboratories, GMC

W. Cornelius  
Research Laboratories, GMC

C. T. Crowe  
Washington State University  
Pullman, Washington

R. Davies  
Research Laboratories, GMC

D. W. Dawson  
Environmental Protection Agency  
Ann Arbor, Michigan

D. L. Dimick  
Engineering Staff, GMC

G. L. Dugger  
Johns Hopkins University  
Silver Springs, Maryland

T. Durrant  
Rolls Royce, Ltd.  
Derby, England

H. C. Eatock  
United Aircraft of Canada Limited  
Lonqueuil, Quebec, Canada

M. K. Eberle  
Research Laboratories, GMC

R. B. Edelman  
General Applied Science Laboratories, Inc.  
Westbury, New York

R. H. Essenhigh  
Pennsylvania State University  
University Park, Pennsylvania

C. P. Fenimore  
G.E. Research & Development Center  
Schenectady, New York

G. Flynn, Jr.  
Research Laboratories, GMC

O. I. Ford  
Aerojet Nuclear Systems Company  
Sacramento, California

J. P. Franceschina  
Chrysler Corporation  
Detroit, Michigan

H. P. Fredrikson  
Research Laboratories, GMC

R. M. Fristrom  
Johns Hopkins University  
Silver Springs, Maryland

N. J. Friswell  
Shell Research Limited  
Chester, England

D. Goalwin  
Rocketdyne  
Canoga Park, California

J. S. Grohman  
NASA-Lewis Research Center  
Cleveland, Ohio

D. C. Hammond, Jr.  
Purdue University  
Lafayette, Indiana

J. L. Hartman  
Research Laboratories, GMC

H. R. Hazard  
Battelle Memorial Institute  
Columbus, Ohio

N. A. Henein  
Wayne State University  
Detroit, Michigan

R. Herman  
Research Laboratories, GMC

D. J. Henry  
Research Laboratories, GMC
J. B. Heywood  
Massachusetts Institute of Technology  
Cambridge, Massachusetts

R. F. Hill  
Research Laboratories, GMC

J. B. Howard  
Massachusetts Institute of Technology  
Cambridge, Massachusetts

J. K. Hubert  
Williams Research Corporation  
Walled Lake, Michigan

S. C. Hunter  
Air Research Manufacturing Co.  
Phoenix, Arizona

R. W. Hurn  
Bureau of Mines  
Bartlesville, Oklahoma

F. P. Hutchins  
Environmental Protection Agency  
Ann Arbor, Michigan

F. E. Jamerson  
Research Laboratories, GMC

H. L. Julien  
Research Laboratories, GMC

S. Katz  
Research Laboratories, GMC

F. Kaufman  
University of Pittsburgh  
Pittsburgh, Pennsylvania

J. C. Kent  
Research Laboratories, GMC

J. R. Kriegel  
KVB Engineering, Inc.  
Tustin, California

R. B. Krieger  
Research Laboratories, GMC

C. LaPointe  
Ford Motor Company  
Dearborn, Michigan

A. H. Lefebvre  
The Cranfield Institute of Technology  
Cranfield, England

L. L. Lewis  
Research Laboratories, GMC

S. G. Liddle  
Research Laboratories, GMC

J. H. Lienesch  
Research Laboratories, GMC

W. H. Lipkea  
Research Laboratories, GMC

J. P. Longwell  
Esso Research and Engineering Company  
Linden, New Jersey

C. Marks  
Engineering Staff, GMC

R. A. Matula  
Drexel University  
Philadelphia, Pennsylvania

W. L. McGaw  
United Aircraft Corp.  
Farmington, Connecticut

J. G. McGowan  
University of Massachusetts  
Amherst, Massachusetts

A. F. McLean  
Ford Motor Company  
Dearborn, Michigan

A. M. Mellor  
Purdue University  
Lafayette, Indiana

H. J. Mertz, Jr.  
Research Laboratories, GMC
ATTENDANCE LIST

G. A. Miles
Detroit Diesel Allison Division, GMC

W. Mirsky
University of Michigan
Ann Arbor, Michigan

J. Moore
General Electric Company
Schenectady, New York

N. L. Muench
Research Laboratories, GMC

L. J. Muzio
Columbia University
New York, New York

P. S. Myers
University of Wisconsin
Madison, Wisconsin

B. E. Nagel
Research Laboratories, GMC

H. K. Newhall
University of Wisconsin
Madison, Wisconsin

E. R. Norster
The Cranfield Institute of Technology
Cranfield, England

P. E. Oberdorfer
Sun Oil Company
Marcus Hook, Pennsylvania

J. Odgers
Laval University
Quebec, Canada

G. Opdyke, Jr.
AVCO Corporation
Stratford, Connecticut

H. B. Palmer
Pennsylvania State University
University Park, Pennsylvania

D. J. Patterson
University of Michigan
Ann Arbor, Michigan

W. H. Percival
Research Laboratories, GMC

C. E. Polymeropoulos
Rutgers University
New Brunswick, New Jersey

D. T. Pratt
Washington State University
Pullman, Washington

A. A. Quader
Research Laboratories, GMC

W. R. Roudebush
NASA Headquarters
Washington, D. C.

C. J. Sagi
Research Laboratories, GMC

A. F. Sarofim
Massachusetts Institute of Technology
Cambridge, Massachusetts

R. F. Sawyer
University of California
Berkeley, California

SUBJECT INDEX

Aircraft (see nitric oxide, smoke)
  engine operating conditions, 280, 347
  exhaust emissions, 281
    airport locality, 350
    carbon monoxide, 356, 357
    hydrocarbons, 356, 357
    oxides of nitrogen, 348, 350
    smoke, 351
    sulfur dioxide, 349
    Los Angeles APCD Rule 67, 337
Air-fuel ratio (see carbon monoxide, combustor, hydrocarbon, nitric oxide)
Atomizer (see fuel injector)
Brayton cycle (see gas turbine)
Burner (see combustor)
Carbon monoxide (see aircraft, combustor, diffusion flame, vehicular powerplants, vehicles)
  factors affecting formation
    air-fuel ratio, 263, 285
    atomization technique, 285, 300
    pressure, 231, 287
    reference velocity, 290
    temperature, 289
    wall bleed, 300
  kinetics of, 88
    effect of quenching, 248
  reduction techniques, 264, 299
  sources in burner, 232
Combustion
  droplet, 28
  efficiency, 361, 386
  H₂/air, 139
  radiative, 11
  turbulence controlled, 13
Combustion efficiency (see combustion)
  relationship with CO emission, 262, 309-311
  relationship with HC emission, 215, 309-311
  atomizer design, 362
Combustor (see nitric oxide, premixing, steam)
  designs
    annular, 256, 361
    atmospheric pressure, 176
    axial swirler, 353
    carbureting, 354
    J-57, 282
  laboratory models, 110, 216, 244
  simplified can, 384
  swirl can (NASA), 306
  vortex, 377
design parameters
  combustion intensity, 383, 387
  exit temperature pattern, 387
  film cooling, 265, 278
  heat release rate, 384, 387
  pressure loss, 383, 387
effect of
  engine pressure ratio, 359, 360, 370
  fuel atomization, 361
  primary zone air flow, 361
  primary zone air-fuel ratio, 361
  primary zone residence time, 361
gas turbine internal profiles
  composition, 220-222, 249, 250
  particulates, 251
  temperature, 223, 228, 248
stationary
  emission control, 341
  applications, 337
  mixing
    ignition eddies, 327, 330
    turbulent eddies, 327
    gas/gas, 329
  pollutant control (see nitric oxide, carbon monoxide, hydrocarbon)
  staged combustion, 89
steady-state performance
  exhaust concentrations
    GPU-3, 397
    GT-309, 395
    SE-101, 396
  comparisons
    combustion efficiency, 397
    emission index, 398, 399
    specific emissions, 400-402
steam
  composition profiles, 143, 144
  heat exchanger effect on emissions, 145, 155, 160, 183
  heat extraction effects, 317
  temperature profiles 145
  test rigs, 142, 163, 194, 445
  thermodynamic cycles
    gas turbine, 379
Rankine, 380
Stirling, 381
Correlating parameters
Eisenklam, 29
Frossling, 29
PT/Vr, 292, 295

Diffusion flame (see flame, smoke)
Droplet, 59
combustion, 28, 98, 120, 176, 215, 240
evaporation, 28, 96, 215, 241
lifetime, 30, 327
mixing, 97
Reynolds number, 29, 31
size
effect of nozzle design, 272
trajectory, 216, 241

Emission index (see combustor, vehicular powerplants)
Equations
Goodsaves Evaporation law, 215, 241
Navier-Stokes, 8
Reynolds Number law, 241
Equivalence ratio (see air-fuel ratio)
Exhaust emissions (see aircraft, vehicular powerplants)
analytical systems, 112, 143, 165, 245, 258
analytical techniques for
carbon monoxide, 112, 124, 143, 165, 246, 259, 285, 443
formaldehyde, 246, 445
hydrocarbons, 112, 124, 143, 246, 259
285, 443
nitric oxide, 124, 143, 165, 219, 246, 259, 443
nitrogen dioxide, 113, 165, 246, 285, 443
oxides of nitrogen, 219, 444
particulates, 246
smoke, 165, 256, 445
averaging composition techniques
cross-sectional, 238
local, 235
sampling techniques, 111, 120, 165, 218, 245, 258, 284, 313, 445

Flame
diffusion, 17
composition profile, 115
temperature profile, 115
H₂/air, 88
premixed, 16, 192
Free radicals, 82, 87, 135, 139, 155, 156, 174
Fuel (see particulates, smoke)
additives (see particulates, smoke)
factors, 5
nitrogen content, 52
Fuel-air ratio (see air-fuel ratio)
Fuel injection (see combustion, combustor, hydrocarbon)
effect on drop size, 272
improvements resulting from, 275
smoke ratings, 206
Fuel injector
air atomizing, 385
air blast, 270
air spray, 255
double swirler air blast, 275
dual orifice, 255
 piloted air blast, 271
pressure, 217
sonic air, 314
Gas turbine (see aircraft, combustor, nitric oxide, odor, smoke, vehicular gas turbine)
Heat exchanger (see combustor, vehicles, vehicular powerplants)
Heterogeneous effects, 175
Hydrocarbon emissions (see aircraft, emission index, exhaust emissions, kinetics)
condensibles, 357
effect of
air-fuel ratio, 285
atomization technique, 276, 285
pressure, 266, 287
reference velocity, 290
temperature, 266, 289
wall bleed, 300
kinetics of formation, 87, 98
computational methods, 33
odor, 358
oxygenates, 357
reduction techniques, 299
source of, 265
species, 357
Kinetics (see carbon monoxide, hydrocarbon, nitric oxide, 0 atoms, premixing)
reactions, 135, 158
Methane oxidation (see nitric oxide)
in shock tubes, 98, 124, 127, 131, 136
mechanism, 125
Modeling of combustion process
as reactors
basic considerations, 4, 49
radiation, 19, 20
basic flows
1-dimensional, 50
2-dimensional, 5, 6
3-dimensional, 67
mathematical solutions
grid size, 18, 19
turbulent, 7
carbon formation, 51, 52, 71, 73
coupled mixing and kinetics, 57
gas turbine combustor
comparison with experimental, 19, 20, 42, 51
flow, 24
multi-phase flows, 57
solutions, 74, 80
physical, 94
quasi-global finite rate HC kinetics, 67
with recirculation, 63
with swirl, 61

Nitric oxide (see aircraft, fuel, vehicular powerplants, vehicles)
computational methods, 37
computed results compared with experimental, 148-150
control techniques, 301, 341
flame temperature reduction, 89, 335, 428
fuel-air distribution, 368
gas recirculation – external, 333, 417, 456
gas recirculation – internal, 437
increased fuel-air mixing, 435
inert diluent, 438
off-stoichiometric combustion, 331
premixing, 368
primary zone equivalence ratio, 430, 449
quenching, 250, 429
staged combustion, 156, 316, 321, 331
uniformity of multi-fired combustors, 331, 336
variable geometry, 321, 368, 439
water injection, 369, 438
factors affecting formation
ambient humidity, 319
combustor design, 163
cool walls, 317
free radical concentration, 171
fuel additives, 171
fuel-air mixing, 162, 168
fuel-air ratio, 172, 183, 295, 367
peak NO\textsubscript{X} ratio, 341
fuel type, 212, 225
general considerations, 162
inlet temperature and lean limit, 447
mixing, 177
pressure, 231, 255, 295, 364
reference velocity, 294
temperature, 183, 255, 293, 364, 409,
428, 451
time, 318, 368, 429, 451
kinetics of formation
compared with CO/CO\textsubscript{2} formations, 169,
172
general considerations, 98, 110, 124, 147,
148, 162, 327, 363, 408
nonequilibrium, 103
“prompt” NO, 88, 89, 117, 119, 137,
155, 174
with methane in shock tube, 124, 127, 130
Zeldovich chain mechanism, 39, 124, 147,
150, 213, 408
sources
in combustors, 232
Nitrogen dioxide, 37, 50, 51, 251, 363
converter, 219
O atoms
general considerations, 87, 91, 136
kinetics, 39, 41, 82
overshoot, 88, 139
Odor (see hydrocarbon)
aircraft, 358
Oxygenates (see exhaust emissions, hydrocarbon)
Oxides of nitrogen (see aircraft, combustor, nitric oxide, nitrogen dioxide, vehicular powerplants)
Los Angeles APCD Rule 67, 337
Particulates (see aircraft, combustor, smoke)
effect of fuel additives, 203
formation, 190
measurement, 251
oxidation, 203
physical description, 203
size computation, 10
Pollution (see chemical species)
general, 458
Premixing (see flame, nitric oxide, smoke)
combustor, 308
homogeneous chemical kinetics, 33
NO control technique, 437
Pressure (see aircraft, carbon monoxide, combustor, correlating parameters, hydrocarbon, nitric oxide, smoke)
Probing
for combustion products (see combustor, diffusion flame)
in combustor, 245
in flame, 111
probes, 111
effect of material, 184
for temperature
calculated, 219, 247
with thermocouple, 245
water-cooled, 218, 245
“Prompt” NO (see nitric oxide)
Radiation (see combustion, modeling)
soot, 209
Rankine cycle (see steam)
Reactor (see modeling)
parallel stirred, 51
partially stirred, 24
plugged flow, 24
well stirred, 24, 52, 91
Residence time (see carbon monoxide, combustor, hydrocarbon, kinetics, nitric oxide)
Shock tube (see methane)
Smoke (soot) (see aircraft, combustor, exhaust emissions, fuel particulates)
effect of
air-fuel ratio, 262
fuel additives, 170, 181, 197-199
fuel type, 190, 196, 209
fuel volatility, 209
general considerations, 162
operating conditions, 195, 255, 259, 311
pressure, 260, 262
pressure atomizer, 259
spray cone angle, 261
spray penetration, 261
temperature, 260
water addition, 259
formation of
in combustors, 193
in diffusion flames, 191
in premixed flames, 192
reduction techniques
fuel additives, 195
general, 195, 296
smoke number, 296, 353
measurement of, 190-192
SAE ARP 1179, 353, 371
sources
in aircraft gas turbine, 189, 259
in automotive gas turbine, 190, 259
Specific emission (see combustor, vehicular powerplants)
Stationary (see combustor, nitric oxide)
Steam (see combustor, vehicles, vehicular powerplants)
Stirling (see combustor, nitric oxide, vehicles, vehicular powerplants)
Sulfur dioxide (see aircraft)
Swirl (see aircraft, combustor, modeling)
general considerations, 253
Temperature (see aircraft, carbon monoxide, combustion, diffusion flames, hydrocarbon, modeling, nitric oxide, probing, smoke)
Turbulence (see combustion, modeling, nitric oxide)
Vehicular powerplants (see nitric oxide, smoke)
driving cycle
