Power generation: see Energy

Price, see also Economics

- of biodegradable polymers, 109
- of bioethanol, 186
- of glucose, 216
- of glucose syrup, 216
- of gluten, 110, 115, 122, 216
- of oil, 17, 186
- of polycaprolactone, 109
- of poly(hydroxybutyrate-valerate), 109
- of poly(lactic acid, 109, 122
- of starch, 24, 109, 216
- of straw compared with coal, 157
- of wheat, 216

Production of cereals, world production, 2
Profitability: see Economics

Properties
- of cereal-based plastics: see Plastics
- of starch: see Starch

Protein, see also Amino acids, Gluten
- in adhesives, 108, 110–111
- animal protein in animal feeds, 3
- cereal proteins as a source of novel food ingredients, 3
- chemical modification, 3, 112–115
- content in Amaranthus and Chenopodium, 80–82
- content in Otane wheat, 275
- conversion to free amino nitrogen, 208
- film formation, 112, 118–119
- fractionation, 86–88, 161
- industrial applications, 107–116
- industrial proteins, 108
- leaf protein concentrate, 160, 161, 229
- in Nature’s Gold, 242
- in plastics, 4, 110, 111–115, 117–123
- SDS-PAGE, analysis of starch integral proteins, 75
- yields, 162–163

Pseudo-cereals: see Amaranthus, Chenopodium

Quality
- of flour, 125, 278
- malt quality improvement, 251–255
Quinoa, 81, 82, 83, 86, 88

Rapid Visco-Analyzer, 96–99
Recycling, 107
- of packaging, 7
- of paper, 5

Reef process for opaque beer production, 267–269

Rheology
- of dough, 277
- of gluten, 110, 111
- modification, 113

Rice
- β-glucan in, 236
- export, 2
- milling, 257
- production volumes, 2
- starch, 96, 98, 99, 100, 103
- transgenic high-lysine rice, 88
Rubber, 50
Rye, β-glucan in, 236

Saccharomyces cerevisiae, 11, 172, 217, 249, 268
Saponins, 86
Science, market economy for, 276–277
SDS-PAGE: see Protein
Sensors: see Analytical methods
Separation
- of bran, 207, 269, 270
- of crop fractions, 192, 195
- of starch and gluten, 180
Shelf life of crackers, 247
of opaque beer, 268–269
Silage, 93, 172
Simulation: see Modelling
Solvents, 4, 50
Sorghum
milling, 269–271
processing in Southern Africa, 265–272
South Africa, sorghum usage, 266
Squalene, 84
Starch
in adhesives, 5, 14, 22, 72
Amaranthus starch, 81, 91–102
barley starch, 69–70, 74, 75, 237
biodegradable plastics from, 10, 16, 18, 25–33, 35–41, 43–47, 109, 117–118
as a carrier, 4
cleaning baked wheat starch deposits, 103–106
comparison of properties, 69–77, 95–101
composition, 70, 74–76
content
in Amaranthus, 81–82, 97
in Chenopodium, 81–82
in milling fractions, 237, 238
conversion ratio to glucose, 211, 217
energy content of, 103
as extender in polyurethane foam, 27–33
as fermentation feedstock, 16, 57–61, 207
fillers in plastics, 4, 18, 27–33
gelatinization, 71, 268; see also pasting
temperature, 99, 100, 103
graft copolymers, 18, 38
granules, 25, 69–70
of Amaranthus, 81, 94
of Chenopodium, 81
granule size distribution, 69–70, 74, 75
hydrolysates, 4, 16
hydrolysis, 14, 73–74, 207, 208, 268
industrial markets, 21–25, 72–74
maize starch, 22, 23, 24, 25, 27–33, 73, 75, 96, 98, 99, 100
Martin process, 177, 207
modified starches, 3, 10, 14–15, 71
novel uses in foods, 3
oat starch, 25, 74, 75, 237
in paper, 5, 13–15, 22, 23, 70, 72
pasting, 71–72, 97–100
in plastics, 4, 18, 22, 25–33, 35–41, 73, 117–118
potato starch, 22, 23, 24, 25, 70, 96, 98, 99, 100, 103
potential usage in detergents industry, 18, 73
present and future uses, 13–19
price, 24, 109, 216
production of lactic acid from, 57–61
production volumes, 1, 109
properties
comparison, 69–77, 95–101
effect of genetic variation, 94–95

Starch (cont.)
Rapid Visco-Analyzer, 96–99
as a raw material, 4
retrogradation, 91, 225
rice starch, 96, 98, 99, 100
specialty starches, 91–102
in textiles, 5, 72
texture, 99–100
thermoplastic, 43–47
usage in the European Union, 14–15, 22, 24
usage in the UK, 13–15, 22, 23
viscosity, 72–73, 91, 97–99
waxy, 70, 74
wheat starch, 22, 23, 24, 25, 69–70, 73, 74, 75, 96, 98, 99, 100, 177–183, 238
Storage
within a biorefinery, 191–192, 193, 199, 200–203
economics, 191–192, 199, 200–203
effect on amino acid content of green juice, 231–232
Straw
in composite boards, 5, 164
composition, 135
for energy production, 5, 153–158, 164, 170
for ethanol production, 173
fractionation, 134, 136, 191
in integrated processes, 164, 169, 172
in paper, 5
pre-treatment for subsequent fermentation, 133–141
price, 157
processing within a wheat biorefinery, 191–204
production volumes, 153, 154, 155
usage, 155–156
Subsidies, 6, 11, 17, 186, 188
Superabsorbents, 18
Surfactants: see Detergents
Sweeteners, 3

Tensile strength
of flax fibres, 134, 135, 140
of plastics, 36–38, 109, 119, 120, 174
Textiles, 5, 49, 72
Texture
of bakery products, 247, 248, 250, 277, 278
of starch pastes, 99–100
Thermoplastic processing of gluten, 110
Thermoplastic starch, 43–47
Total processing concept: see Biorefinery, Integrated bioprocesses
Trading
world production and trade, 2
Transport
economics, 199–200, 203

United Kingdom
starch usage, 13, 14, 21–25
straw
production 153–155
usage, 155–156
United States of America
  bioethanol usage, 185
  cereal production and trade, 2, 117
  export prices, 9
  growth of pseudo-cereals, 79
  legislation effects on cereal usage, 6
  Nutrition Labelling and Education Act, 234

Valeric-γ-lactone, 50
Vanillin, 4
Viscosity
  of oat gums, 235
  of starch pastes, 72–73, 91, 97–99
Vitamins, 17, 170, 211, 217, 219, 238
  in aleurone layer and products, 211, 241, 243–244
  in *Amaranthus* grains, 85
  in *Chenopodium* grains, 85
  folic acid, 85, 170, 211, 241, 243–244
  niacin, 85, 170, 211, 241, 243–244
  riboflavin, 85, 170, 211, 243
  thiamine, 85, 170, 211, 241, 243–244

Waste treatment, 169, 174, 175
Water absorption of debranned wheat, 259–260
Water sensitivity of plastics, 43–47, 107
  modification, 113–115
Water soluble carbohydrates, 143–150
Water usage in starch and gluten production, 177, 180
Water vapour permeability of gluten-based plastics, 119–122
Waxy starches: see Starch
Wet oxidation of agricultural crop residues, 133–141
Wet strength, of gluten films, 114
Wheat, see also Durum wheat, Flour, Milling
  abrasion/friction pre-processes, 236–238, 257–264
  β-glucan in, 236–238
  biorefinery, 192–203
  bran, 236–238, 241–242, 249
  conditioning, 257
  cultured wheat fractions, 249
  ethanol yield from, 169, 171
  export, 1, 2
  as fermentation feedstock, 205–218, 219–227
  fractionation, 191
  germ, 241–242, 249
  gluten: see Gluten

Yield
  of alcohol, 172
  of *Amaranthus*, 92, 93
  of bran from milling, 237
  of crops, 193
  for bioethanol production, 187
  effect on ash content of debranned wheat, 261, 263
  of ethanol from fermentation, 173–174, 215
  of flour, 237, 257
  of fructose, 146
  of green plants in temperate and tropical climates, 159
  of lactic acid, 220, 223, 226
  per land unit, 169–171
  of levulinic acid, 51
  during malting, 252
  processing yields of extracted leaf protein, 163
  production yield during baking, 250
  of protein per hectare, 162–163
  during sorghum milling, 271
