INDEX

A
Agatston score, coronary artery calcification, 117, 130–132
Angiography, conventional
electron beam computed tomography comparison, 330
heart valve studies, 155
imaging requirements, 321
limitations, 381
multislice computed tomography comparison, 323
Angiosarcoma, see Cardiac masses
Aortic valve, see Heart valves
Atherosclerotic plaque, see also Coronary artery calcification
adaptive intimal thickening, 351
angiography limitations, 381
calcified nodule, 357
classification, 351, 352, 377
computed tomography angiography combination with calcium score for plaque burden and morphology determination, 333, 334
detection rationale, 381
erosion, 356
fibrous and fibrocalcific plaques, 358
fibrous cap atheroma, 352
healed ruptures, 357, 358
hemorrhage, 358, 359
intimal xanthomas, 351
magnetic resonance imaging
computed tomography comparison and combination, 396, 397
coronary plaques, 395
monitoring, 395
noncoronary plaques, 395
overview, 389
prospects, 396
technique, 390
morphology and degree of calcification, 112, 113
multidetector-row computed tomography
coronary plaques, 392, 395
data acquisition, 389, 390
morphology of calcifications, 377–379
noncalcified lesions, 399, 400
noncoronary plaques, 390, 391
prerequisites, 377
prospects, 379, 380, 395, 396
quantitative analysis, 379
sensitivity, 392
multislice computed tomography
16-slice MSCT, 383–385, 387
data acquisition, 381, 382
intravascular ultrasound comparison, 382, 383, 391
pathologic intimal thickening, 352
rupture, 353, 356
thin fibrous cap atheroma, 352, 353
thrombosis, 353
total occlusions, 358
vulnerable plaque
endothelial cell activation, 365, 367, 368
features, 365
oxidative stress in formation, 365, 367
prospects for study, 371
statins
pleiotropic effects, 369, 370
stabilization, 368, 369
B
Bolus, see Contrast material
Bypass graft assessment, see Coronary artery bypass grafting
CABG, see Coronary artery bypass grafting
CAC, see Coronary artery calcification
Calcification, see Coronary artery calcification
Cardiac masses
benign cardiac tumors, 173, 174
electron beam computed tomography
comparison with multidetector-row computed tomography, 171
data acquisition, 171, 172
prospects, 181
epidemiology, 172, 173
malignant tumors
primary tumors, 177
secondary tumors, 177
multidetector-row computed tomography
comparison with electron beam computed tomography, 171
contrast material, 172
data acquisition, 171, 172
prospects, 181
thrombus imaging, 178, 179, 181
Cardio-interpolation (CI), phase weighting, 55
Autobone, 248, 249
CardIQ analysis
curved two-dimensional reformatting, 249, 250
left ventricular wall motion and function analysis, 255
navigator virtual endoscopy, 252
stenosis quantification, 250
CHD, see Coronary heart disease
Chest film, coronary artery calcification visualization, 113
Chest pain evaluation
electron beam computed tomography, 93–97
multidetector-row computed tomography, 121, 122
CI, see Cardio-interpolation
Cine ventriculography, left ventricular function assessment, 183
Computed tomography angiography (CTA)
bypass graft assessment, see Coronary artery bypass grafting
calcification attenuation, 329
calcium score combination
algorithm for complementary use, 335, 337
angiography value by calcium score
high score, 335
intermediate borderline score, 335
no or low scores, 335
plaque burden and plaque morphology determination, 333, 334
suspected coronary stenosis evaluation, 334, 335
Cardiac applications, overview, 10
contrast material
bolus geometry, factors affecting
bolus chaser, 240
demographics, 237, 238
disease, 238
injection rate, 238
injection site, 241
injection volume, 238
iodine concentration, 238
multiphasic protocols, 240, 241
bolus tracking, 241
fixed-delay technique, 241, 244
guidelines for administration, 244
overview, 237
test bolus technique, 241, 244
coronary anatomy, 219–227
coronary artery anomalies, see Coronary artery anomalies
electron beam computed tomography
comparison with conventional angiography, 330
overview, 329, 330, 333
prospects, 330
image visualization
artery identification
coronary vessel tree, 248
three-dimensional maximum intensity projection, 248
volume rendering, 247
bifurcations within different projections, 248
curved two-dimensional reformatting, 249, 250
multiplanar volume reformation with Autobone, 248, 249
navigator virtual endoscopy, 252
selection of optimum phase with multiphase review of reformatted images, 246
stenosis quantification, 250
imaging requirements, 321
magnetic resonance angiography comparison, 339–341, 343–346
multidetector-row computed tomography
axial image analysis, 231–233
bolus timing techniques, 241, 243, 244
image postprocessing, 230, 231
Kawasaki disease assessment, see Kawasaki disease
overview, 229, 234
patient preparation, 229, 230
scan acquisition, 230
multislice computed tomography
4-slice MSCT performance
conventional angiography comparison, 323
coronary obstruction detection, 325, 327
image interpretability, 323–325
16-slice MSCT performance, 327, 328
advantages, 331
arrhythmia effects, 329
clinical implementation, 331
data acquisition, 321, 322
motion artifacts, 328, 329
overview, 29, 30, 32–37, 259, 260, 321, 333
patient-based assessment, 328
postprocessing and data analysis, 322, 323
prospects, 331
respiration and scan time, 329
temporal resolution, 328
radiation dosage, 10
stent and surgical material attenuation, 329
Computed tomography dose index (CTDI)
definition, 63
measurement, 63
radiation dose by imaging technique, 65
volume CTDI, 63
weighted CTDI, 63
Congenital heart disease, see Multislice computed tomography
Contrast material
administration, 9
computed tomography angiography
bolus geometry, factors affecting
bolus chaser, 240
demographics, 237, 238
disease, 238
injection rate, 238
injection site, 241
injection volume, 238
iodine concentration, 238
multiphasic protocols, 240, 241
bolus tracking, 241
fixed-delay technique, 241, 244
guidelines for administration, 244
Coronary arteries
anatomy
left coronary artery, 219
right coronary artery, 221, 222
angiography, see Angiography, conventional; Computed
tomography angiography; Magnetic resonance
angiography
anomalies, 225, 227
bypass graft assessment, see Coronary artery bypass
grafting
related veins, 224, 225
Coronary artery anomalies
aberrant sinus node artery, 269
clinical importance, 259, 260
complex and combined anomalies, 268, 269
ectopic origin of coronary arteries above aortic cusp,
269, 270
etiology, 260
fistula
anatomy, 271, 273
clinical relevance, 273
etiology, 271
pathophysiology, 271, 273
prevalence, 271
left anterior descending artery
doubled artery, 265
origin defects
left circumflex, 264
pulmonary artery, 265
right sinus of valsalva, 261
transseptal course, 265, 268
left circumflex coronary artery, 268
left coronary artery origin defects
pulmonary artery, 263
right sinus of valsalva, 261, 263
separate ostia, 261
multislice computed tomography, 259, 260, 274–276
myocardial bridges
anatomy, 273
clinical relevance, 273, 274
etiology, 273
prevalence, 273
prevalence, 260
right coronary artery origin defects
conus artery, 261
distal circumflex, 261
left coronary artery branches, 261
left sinus of valsalva, 261
posterior sinus of valsalva, 261
pulmonary trunk, 261
single coronary artery, 270
Coronary artery bypass grafting (CABG)
internal mammary artery grafts, 301, 302
minimally invasive bypass surgery planning,
see Totally endoscopic coronary artery bypass
grafting
multidetector-row computed tomography
overview, 302, 303
postoperative applications, 305, 306
preoperative applications, 303–305
Coronary artery calcification (CAC)
asymptomatic persons, 73
chest film visualization, 113
chest pain differential diagnosis with imaging, 121, 122
comparison of computed tomography instruments, 138, 139
computed tomography angiography combination
algorithm for complementary use, 335, 337
angiography value by calcium score
high score, 335
intermediate borderline score, 335
no or low scores, 335
plaque burden and plaque morphology determination,
333, 334
suspected coronary stenosis evaluation, 334, 335
coronary artery disease correlation, 71–74, 83, 84, 101,
108, 112, 120, 121
double-helical computed tomography
calcification progression monitoring
accuracy, 97
clinical significance, 97, 98
transplanted hearts, 98, 99
treatment monitoring, 98
chest pain evaluation, 93–97
chronic versus acute coronary artery disease imaging,
92
dilated cardiomyopathy differential diagnosis, 97
prediction of angiographic obstructive disease, 93
electron beam computed tomography
clinical applications, 86–88
principles, 83, 115, 129
reproducibility, 115
evolution of computed tomography techniques, 129, 130
multidetector-row computed tomography
calibrated calcium mass, 107
clinical value, 108, 109, 120–124
comparison with other techniques, 104, 105, 114, 115
electrocardiogram gating, 106
noise, 106
principles, 103, 104
prospects, 108, 109
scanning
protocol, 106, 107
sequential scanning, 118
spiral scanning, 118–120
spatial resolution improvement, 106, 115
pathophysiology, 91, 112
phantoms for testing, 134, 135, 139, 140
plaque morphology and degree of calcification,
112, 113
predictive value for cardiovascular events, 73, 84–86,
101, 123, 124
prevalence, 113
progression, 86, 91, 97, 122, 359, 360
prospects for testing, 76
rationale for imaging, 79, 81
scoring
Agatston score, 117, 130–132
calcium mass, 117, 133, 134
calcium volume score, 117, 132, 133
prospects, 139, 140
quality assurance tools, 134–136, 138, 139
screening
clinical trials, 124
guidelines, 74–76
identification of at-risk patients, 122, 123
X-ray attenuation by calcium, 129
Coronary heart disease (CHD), see also Atherosclerotic plaque
atherosclerotic disease classification, 112
epidemiology, 111
risk stratification, 111, 112
Coronary veins
anatomy, 222, 223
great cardiac vein, 223
middle cardiac vein, 223
related arteries, 224, 225
CTA, see Computed tomography angiography
CTDI, see Computed tomography dose index

D
DHCT, see Double-helical computed tomography
DLP, see Dose-length product
Dose-length product (DLP)
computation, 63
radiation dose by imaging technique, 65
Double-helical computed tomography (DHCT)
calcification progression monitoring
accuracy, 97
clinical significance, 97, 98
transplanted hearts, 98, 99
treatment monitoring, 98
chest pain evaluation, 93–97
chronic versus acute coronary artery disease imaging, 92
dilated cardiomyopathy differential diagnosis, 97
prediction of angiographic obstructive disease, 93

E
EBCT, see Electron beam computed tomography
Echocardiography
congenital heart disease, 161
heart valves, 155
Kawasaki disease, 279, 280
left ventricular function assessment, 183
pericardium, 145
Electrocardiogram-correlated reconstruction, see also Image reconstruction
definition, 55
Electrocardiogram gating, see Multidetector-row computed tomography; Multislice computed tomography
Electrocardiogram triggering, see Electron beam computed tomography; Multislice computed tomography
Electron beam computed tomography (EBCT)
angiography, see Computed tomography angiography
calibration, 16
cardiac applications

angiography, 19
coronary calcium scoring
clinical applications, 86–88
principles, 83, 115
reproducibility, 115
function studies, 21
overview, 10, 19, 21
cardiac masses
comparison with multidetector-row computed tomography, 171
data acquisition, 171, 172
prospects, 181
electrocardiogram triggering, 17–19
flow mode, 6, 18
historical perspective, 3, 5, 15
instruments and specifications, 5, 6, 15, 18
left ventricular function assessment, 183, 184
movie mode, 6
principles, 5, 15, 16, 83
prospects, 21
radiation dosage, 10, 19
scan modes
continuous volume scan mode, 6, 7, 18, 21
prospective triggering, 16–18
step volume scan mode, 6
stent patency assessment
criteria for patency, stenosis, and occlusion, 313
historical perspective, 311, 312
prospects, 316, 317
scan protocols, 312, 313
temporal resolution, 8, 9, 18
tuning, 16

F
Fast computed tomography, microvascular function assessment
blood volume-to-flow relationship, 197
coronary microembolization, 200, 201
functional heterogeneity evaluation, 201
growth studies, 197
hypercholesterolemia studies, 198, 199
parameters in assessment, 195–197
prospects, 201, 202
subclinical coronary artery stenosis, 199, 200
Fibroma, see Cardiac masses

H
Heart valves
angiography studies, 155
echocardiography, 155
multidetector-row computed tomography
calcification of valves, 155–158
limitations, 158
morphology imaging, 156
prospects, 158, 159
scanning, 156
Helical/spiral computed tomography, see also Double-helical computed tomography
advantages, 7
cardiac applications, overview, 10
historical perspective, 5
prospective gated scanning, 7, 8
radiation dosage, 10
retrospective gated scanning, 8
temporal resolution, 8, 9
Hounsfield, Godfrey, 3, 4
Image reconstruction
  kymogram detection for phase-correlated reconstruction
    performance
      cardiac imaging, 56, 59
      thoracic imaging, 59, 61
    principles, 55, 56
multislice computed tomography
  electrocardiogram-gated scans, 24, 26–28, 48
  electrocardiogram-triggered scans, 46–48
  multisegment reconstruction, 49–51
  single-segment reconstruction, 48–49, 51
Intravascular ultrasound (IVUS)
  comparison with computed tomography for coronary
    plaque detection, 382, 383, 391
  indications, 382
  technique, 382
IVUS, see Intravascular ultrasound

K

  angiography, 280
  clinical features, 279
  diagnostic criteria, 279
  echocardiography, 279, 280
  magnetic resonance imaging, 280
  management, 279, 284
  multidetector-row computed tomography
    case studies, 281–284
    detectability, 281
Kymogram detection
  performance
    cardiac imaging, 56, 59
    thoracic imaging, 59, 61
  principles, 55, 56
Left ventricular function
  CardIQ analysis, 255
  cine ventriculography, 183
echocardiography, 183
electron beam computed tomography, 183, 184
magnetic resonance imaging, 183, 184, 192–194
multidetector-row computed tomography
  accuracy and reproducibility, 188, 191
  data acquisition, 187, 188
  data analysis, 188
  image reconstruction, 188
  magnetic resonance imaging comparison, 192–194
    principles, 184
    prospects, 192
    volumetric data, 184, 185, 187
  parameters in assessment, 183
single photon emission computed tomography, 183
Lipoma, see Cardiac masses

M
Magnetic resonance angiography (MRA)
  computed tomography angiography comparison, 339–341,
    343–346
  performance, 330, 339–341
Magnetic resonance imaging (MRI)
  atherosclerotic plaque imaging
    computed tomography comparison and combination, 396, 397
    coronary plaques, 395
    monitoring, 395
    noncoronary plaques, 395
  overview, 389
  prospects, 396
  technique, 390
  cardiac masses, 181
  congenital heart disease, 161
  Kawasaki disease, 280
  left ventricular function assessment, 183, 184, 192–194
  myocardial perfusion, 207
  pericardium, 145
MDCT, see Multidetector-row computed tomography
Microvascular function
  fast computed tomography
    blood volume-to-flow relationship, 197
    coronary microembolization, 200, 201
    functional heterogeneity evaluation, 201
    growth studies, 197
    hypercholesterolemia studies, 198, 199
    parameters in assessment, 195–197
    prospects, 201, 202
    subclinical coronary artery stenosis, 199, 200
    rationale for imaging, 195
Mitral valve, see Heart valves
MRA, see Magnetic resonance angiography
MSCT, see Multislice computed tomography
Multidetector-row computed tomography (MDCT)
  angiography, see Computed tomography angiography
  atherosclerotic plaque imaging
    coronary plaques, 392, 395
    data acquisition, 389, 390
    magnetic resonance imaging comparison and combination, 396, 397
    morphology of calcifications, 377–379
    noncalcified lesions, 399, 400
    noncoronary plaques, 390, 391
    prerequisites, 377
    prospects, 379, 380, 395, 396
    quantitative analysis, 379
    sensitivity, 392
  cardiac masses
    comparison with electron beam computed tomography, 171
    contrast material, 172
    data acquisition, 171, 172
    prospects, 181
coronary artery bypass grafting
overview, 302, 303
postoperative applications, 305, 306
preoperative applications, 303–305

coronary artery calcification imaging
calibrated calcium mass, 107
clinical value, 108, 109, 120–124
comparison with other techniques, 104, 105, 114, 115
electrocardiogram gating, 106
noise, 106
principles, 103, 104
prospects, 108, 109
scanning
protocol, 106, 107
sequential scanning, 118
spiral scanning, 118–120
scoring
Agatston score, 117, 130–132
calcium mass, 117, 133, 134
calcium volume score, 117, 132, 133
prospects, 139, 140
quality assurance tools, 134–136, 138, 139
spatial resolution improvement, 106, 115
evolution of technique, 101, 103
heart valve imaging
calcification of valves, 155–158
limitations, 158
morphology imaging, 156
prospects, 158, 159
scanning, 156
instrumentation, 103, 104
Kawasaki disease assessment, see Kawasaki disease

overview, 313
prospects, 317, 318
restenosis rates, 311

T
TECABG, see Totally endoscopic coronary artery bypass grafting
Tetralogy of Fallot, multislice computed tomography, 169
Thrombi, see Cardiac masses
Totally endoscopic coronary artery bypass grafting (TECABG)
multidetector-row computed tomography
clinical studies
4-row MDCT, 291, 292, 294
16-row MDCT, 294, 298
image reconstruction and evaluation, 291
prospects, 298, 299
rationale, 287
scanning parameters, 290, 291
operative technique, 288–290
surgical techniques, 287
Tumors, see Cardiac masses; Pericardium

U
Ultrasound, see Echocardiography; Intravascular ultrasound

V
Valves, see Heart valves
