Index

A
Abnormal vascular connections
  aortopulmonary window
    associated defects, 348
  classification of, 347–348
  description, 347
  management, 348
  morphologic types, 348
  pathophysiology, 348
  TEE applications, 348–351
  patent ductus arteriosus
    anatomic features, 342
    associated defects, 342
    management, 343
    pathophysiology, 343
    TEE applications, 343–347
Absorption, 8
Acoustic impedance, 5
Acoustic pressure, 4
Acoustic quantification, right ventricular function, 136
Acoustic scattering, 7
Acoustic shadowing, 5
Adult congenital heart disease
  cardiovascular malformations
    atrial septal defects, 457
    atrioventricular canal defects, 459–461
    ventricular septal defects, 457–459
  cognitive skills required for TEE, 456
  echocardiographic imaging, 455–457
  left ventricular outflow tract lesions
    bicuspid aortic valve, 464–465
    coronary artery anomalies, 470–471
    Ebstein anomaly, 466–467
    Fontan connection, 469–470
    Glenn shunt, 468–469
    mustard/sennling atrial switch operations, 468
    subaortic stenosis, 465–466
    transposition complexes, 467
    pulmonary venous connections, 461–462
  right ventricular outflow lesions
    pulmonary stenosis, 462
    tetralogy of Fallot, 462–464
  risk conditions, 456
Aliasing, 30, 176–177
Ambulatory/outpatient setting, 77–78
A-mode imaging, 16
Anechoic, 7, 44, 46
Anomalous aortic origin of a coronary artery (AAOCA)
  anatomy, 372
  forms of, 372, 373
  TEE evaluation
    color Doppler flow, 373
    mid esophageal aortic valve short-axis view, 372, 374
    mid esophageal long-axis view, 375
    surgical repair, 375
Anomalous origin of the left coronary artery from the pulmonary
  artery (ALCAPA)
  anatomy, 375–376
  TEE evaluation, 376–377
Aorta origin, pulmonary artery
  anatomic features, 354
  bifurcation, 356
  biplane transesophageal probe, 356–357
  distal origin, anomalous vessel, 356–357
  management, 354–355
  pathophysiology, 354
  PDA and conotruncal anomalies, 354
  postsurgical assessment, TEE, 357
Aortic arch anomalies, 357–358
  coarctation of the aorta
    anatomic features, 358
    associated defects, 358–359
    management, 359
    pathophysiology, 359
    TEE applications, 359–361
  interrupted aortic arch
    anatomic features, 361
    associated defects, 361–362
    pathophysiology, 362
    surgical management, 362
    TEE applications, 362–365
Aortic dissection evaluation, 430–432
Aortic regurgitation (AR)
  bicommissural morphology and, 294
  criteria for classification, 294–295
  effective regurgitant orifice area calculation, 295
  prosthetic aortic valve, 296
  quadricuspid aortic valve, 293–294
  Ross procedure, 296
  ruptured sinus of Valsalva aneurysm, 293–295
  severity, 295
Aortic stenosis (AS), left ventricular outflow tract
  subvalvar
    acoustic interference by prosthesis, 292
    fibromuscular ridges, 290–291
    leaflet and commissural morphology, 290
    mechanisms, 288
    ridge-aortic annulus distance, 290
    steep aorto-septal angle, 290
    systolic anterior motion, mitral valve, 290–291

Aortic stenosis (AS), left ventricular outflow tract (cont.)
  supravalvar, 292–293
  valvar
    bicuspid aortic valve, fishmouth appearance, 285–286
    criteria for stenosis severity, 288
    dysplastic aortic valve, 287
    intercoronary commissure, 285, 287
    pressure recovery phenomenon, 288
  transcatheter aortic valve replacement/implantation, 288, 289
  transcatheter balloon valvotomy, 286
Aortopulmonary septal defect. See Aortopulmonary (AP) window/fenestration
Aortopulmonary (AP) window/fenestration
  associated defects, 348
  classification of, 347–348
  description, 347
  management, 348
  morphologic types, 348
  pathophysiology, 348
  TEE applications, 348–349
    after surgical intervention, 350–351
    hemodynamic effects, 350
    identification of window, 349
    intraoperative monitoring, 350
    PASP, 350
  shunting across window, 350
Arrays, 13–14
Artifacts, echocardiography
  acoustic shadowing, 44–45
  mirror image artifacts, 42–44
  reverberation artifacts, 43–44
  side lobes and grating lobes, 43–45
Atria and atrial septum evaluation, 101–102
Atrial communication, creation/enlargement, 447–449
Atrial flutter, 3D TEE, 515, 520–521
Atrial septal defects (ASD), 63, 64
  agitated saline injection, 178–179
  anterior position, left atrial appendage, 178
  atrial level communications, 180, 185
  atrial level shunting, 179, 182
  cardiovascular malformations, adult CHD, 457
  clockwise and counterclockwise turning, 175–176
  coronary sinus, 173, 176–178
  3D TEE, 508, 510
  flap valve of foramen, 178–179
  interatrial septum
    bulging, 178–179
    cross section, 173
    in deep transgastric window, 179, 183
    flow across interatrial communication, 173–174
    two-dimensional and color information, 179, 183
  occlusion sequence, 441–442
  patent foramen ovale, 173
  postoperative TEE evaluation, 181, 186
  preoperative TEE evaluation, 180, 185
  primum ASD, 172, 175
  pulmonary veins
    aliasing, 176–177
    color flow Doppler and spectral tracing, 176–177
    coursing in anterior to posterior direction, 176–177
    right ventricular size and function, 180, 184
  secundum ASD, 179–181, 183
  atrial communication, 172–173
  2D and color information, 179, 183
  in midesophageal bicaval view, 179–181
minimal probe shaft movements, 174
  right atrial appendage, 175
  rims of, 440
  shunting, 179, 181
  sinus venosus, 172–175, 178–180, 184
  superior vena cava, 179, 182
  TEE, occlusion, 440
  transcatheter closure, 438–439
  transducer anteflexion, 176, 178
  tricuspid valve and right ventricular infl ow, 175–176
  volume overload and systolic function, 179, 182
Atrial situs and systemic/pulmonary venous return
  dilated coronary sinus, 97, 98
  hepatic veins, 97
  inferior vena cava, 97, 98
  mid esophageal bicalval view, 98, 99
  mid esophageal four chamber view, 96
  pulmonary veins, 99–100
  visceroa atrial situs, 97
Atrial switch procedures, 3D TEE, 514, 517–519
Atriopulmonary Fontan connection
  intraatrial thrombi, 276
  schematic diagram, 274–275
  swirling of flow and spontaneous echo contrast, 275
  type and location, color Doppler, 275–276
Atrioventricular septal/canal defects (AVSD)
  cardiovascular malformations, adult congenital heart disease, 459–461
  2D imaging, incomplete defects, 205
  Doppler evaluation, TEE
  intracardiac shunting, 205–206
  regurgitant jets, 206–207
  valvar components, during systole, 206–207
  3D transthoracic echocardiographic imaging, 210–212
  management, 198
Atrioventricular valve
  anomalies
    infectious endocarditis, 233, 235
    mitral valve prolapse, 232–233
    prosthetic mitral valve, 231–232
    ruptured tendinous chords, 233
evaluation
en face visualization, 106
ME 4 Ch view, 103
mid esophageal mitral commissural view, 103, 104
mitral valve, 103
morphologic identification, 102
transgastric basal long axis view, 104, 106
transgastric basal short axis view, 104
transgastric visualization, 107
tricuspid valve, 105, 106
Attenuation, 8
Audible Doppler, 39
AV canal. See Atrioventricular septal/canal defects (AVSD)
Axial resolution, 19, 20

B
Backing/damping material, 10
Bacteremia, 82–83
Beam former, 14
Beam width, 19
Bicuspid aortic valve (BAV)
3D TEE, 505, 507
left ventricular outflow tract lesions, 464–465
Bidirectional Glenn anastomosis, 273–274
Biplane probes, 51–52
B-mode imaging, 16, 36
Branch pulmonary artery anomalies
from aorta
anatomic features, 354
bifurcation, 356
biplane transesophageal probe, 356–357
distal origin, anomalous vessel, 356–357
management, 354–355
pathophysiology, 354
PDA and conotruncal anomalies, 354
postsurgical assessment, TEE, 357
left pulmonary artery from right pulmonary artery
anatomic features, 351
management, 352
pathophysiology, 352
TEE applications, 352–354
tracheobronchial abnormalities, 351–352
Bulboventricular foramen (BVF), 257, 267. See also Ventricular septal defects (VSD)

Cardiac thrombus
attachment point, 407
vs. Chiari network, 407–408
in left atrial appendage, 408
in left ventricular apex, 407
spontaneous echo contrast, 408
in superior vena cava, 407
Cardiac tumors
primary type, 408
secondary/metastatic, 408
Cardiovascular malformations, adult CHD
atrial septal defects, 457
atrioventricular canal defects, 459–461
ventricular septal defects, 457–459
Classic repair for CCTGA, 356
Coarctation of the aorta (CoA)
anatomic features, 358
associated defects, 358–359
management, 359
pathophysiology, 359
TEE applications
hemodynamic assessment, 360–361
postsurgical assessment, 361
thoracic descending aorta, 360
thoracotomy vs. sternotomy, 359
turbulent flow across obstruction, 360
Color flow Doppler
acquisition, 36
for congenital heart defects, 38
information displaying, 37
mean velocities mapping, 39
vs. PW Doppler, 39
scan line evaluation, 37
signal processing, 37
Color M-mode flow propagation velocity, 136
Comet tails, 43
Common arterial trunk. See Truncus arteriosus (TA) communis
Compressions, 2
Congenital coronary artery anomalies
anomalous origin of the left coronary artery from
the pulmonary artery
anatomy, 375–376
TEE evaluation, 376–377
coronary artery fistula
anatomy, 377
TEE evaluation, 378
coronary artery from the aortic root, aberrant origin
anatomy, 372
TEE evaluation, 372–375
Kawasaki disease
anatomy, 378–379
TEE evaluation, 379
Congenital heart disease (CHD)
in adults (see Adult congenital heart disease)
ambulatory/outpatient setting, 77–78
bacteremia and endocarditis prophylaxis, 82–83
for children
biplane probes, 51–52
clinical experience, 55–57
history, 51
multiplane probes, 52–59
single-plane probes, 51
contraindications, 81–83
critical care setting, 78
diagnostic assessment, 75–76

C
Cardiac flow, 34–35
Cardiac malposition, 117
Cardiac masses
fibromas, 409
hemangiomas and teratomas, 411
myxomas, 409–410
rhabdomyomas, 409, 410
TEE applications, 405–406, 411
thrombus
attachment point, 407
vs. Chiari network, 407–408
in left atrial appendage, 408
in left ventricular apex, 407
spontaneous echo contrast, 408
in superior vena cava, 407
tumors
primary type, 408
secondary/metastatic, 408
Congenital heart disease (CHD) (cont.)
evaluation, 3D TEE
applications and development, 489–494
artifacts, 495, 497
clinical application, 485–489
considerations, 483–485
limitations, 495
pitfalls, 495
stitch artifact, 497
guidance during interventions, 77
indications evolution, 74–75
knowledge base skills, and training
on adult applications, 79
category, 79
initial practice guidelines, 78–79
training and maintenance, 80
perioperative evaluation
cardiovascular surgery, 76
noncardiovascular surgery, 77
safety considerations and complications, 80–81
TEE application
atrial communication, creation/enlargement, 447–449
atrial septal defects, transesophageal imaging, 438–439
dilation guidance, 448
electrophysiologic studies, 438
Fontan fenestrations/Baffle leaks closure, 447–448, 450–452
intraoperative TEE (see Intraoperative transesophageal echocardiography, CHD)
valve dilation procedures, 438
ventricular septal defects, transesophageal imaging, 439–447
Congenitally corrected transposition of the great arteries (CCTGA)
anatomy
clinical presentation, 331
looping, 329
pulmonary outflow tract obstruction, 331
schematic drawings, 330
subaortic stenosis and atrial septal defects, 331
tricuspid valve, 331
VSD, 331
biventricular surgery, 334
anatomic repair, 336–337
physiologic repair, 336
echocardiographic evaluation
anatomic features, 331
intracardiac anatomy and ventricular outflow tracts, Doppler interrogation, 332–334
left sided tricuspid valve, 332
perimembranous ventricular septal defect, 332–333
pulmonary outflow tract, 332–333
smooth walled septal surface, 332–333
structures, 332
Congenital mitral valve anomalies
double-orifice
morphology and management, 213–214
TEE, 219
3D transthoracic echocardiographic imaging, 225
isolated cleft
morphology and management, 214
TEE, 219–220
mitral arcade
morphology and management, 214
TEE, 220
mitral stenosis
assessment of, 221–223
morphology and management, 212–213
TEE, 216
mitral valve regurgitation
assessment of, 223–225
morphology and management, 214–215
TEE, 221
parachute mitral valve
morphology and management, 213
TEE, 216, 218–219
pathophysiology, 215
straddling mitral valve
morphology and management, 214
TEE, 220
supravalvar mitral ring
morphology and management, 213
TEE, 217–219
TEE
postoperative evaluation, 225
preoperative evaluation, 215–216
Congenital tricuspid valve anomalies
assessment of tricuspid regurgitation, 231
3D echocardiographic imaging, 231
Ebstein anomaly
morphology and management, 225–226
TEE, 227–230
pathophysiology, 226
TEE
postoperative evaluation, 231–232
preoperative evaluation, 226
tricuspid valve dysplasia
morphology and management, 226
TEE, 230–231
Congenital valvar aortic stenosis (AS), left ventricular outflow tract
bicuspid aortic valve, fishmouth appearance, 285–286
criteria for stenosis severity, 288
dysplastic aortic valve, 287
intercoronary commissure, 285, 287
pressure recovery phenomenon, 288
right vs. noncoronary leaflets commissure, 285–286
transcatheter aortic valve replacement/implantation, 288, 289
transcatheter balloon valvotomy, 286
Conotruncal abnormalities
congenitally corrected transposition of great arteries
anatomy, 329–331
biventricular surgery, 334–337
echocardiographic evaluation
anatomic features, 331
tetralogy of Fallot
anatomy, 308–309
echocardiographic evaluation, 309–310
large patent foramen ovale, 314–315
minimal residual atrioventricular valve regurgitation, 314–315
repair of discontinuous pulmonary arteries, 312–313
residual ventricular septal defect, 311–312
right ventricular infl ow-outfl ow view, 312–314
right ventricular outfl ow tract, 311–312
severe tricuspid regurgitation, 315
spectral continuous wave Doppler tracing, 312–313
unobstructed left ventricular outflow tract, 314–315
ventricular septal defect, 310, 312
transposition of great arteries
anatomy, 323–324
echocardiographic evaluation, 324–326
surgical intervention, 326
truncus arteriosus
  anatomy, 319–321
  echocardiographic evaluation, 321–322
  surgical considerations, 321–323
Conoventricular VSD. See Perimembranous VSD
Continuous wave (CW) Doppler, 28
Contrast resolution, 21–22
Coronary artery anomalies, left ventricular outflow tract, 470–471
Coronary artery evaluation, 113–114
Coronary artery fistula (CAF)
  anatomy, 377–378
  TEE evaluation, 378
Cor triatriatum
  associated defects, 188
  description, 186
  3D TEE, 504–506
  eccentric posteriorly located orifice, 188, 189
  echocardiographic evaluation, 189–190
  membrane, 188, 189
  postoperative evaluation, 190
  preoperative assessment, 190
  pulmonary venous obstruction, 188
  severity of obstruction, 187, 189
Critical care setting, 78
D
Damus-Kaye-Stansel (DKS) procedure
  anastomosis, 270–271
  flow through ascending aorta, 269
  palliative arterial switch, 270–271
  semilunar valve regurgitation, 270–271
Descending aorta evaluation, 117
Diastolic ventricular function evaluation
  color M-mode flow propagation velocity, 136
  mitral infl ow Doppler, 132
  pulmonary venous Doppler, 132–133
  tissue Doppler imaging
    in children, 134–135
    diastolic velocities, 133
DICOM, 45–47
Diffuse reflection, 6, 7
Digital conversion, 17
Digital image storage, 45–47
Digital loop preferences, 42
Doppler echocardiography
  aliasing, 30
  audible Doppler, 39
  color flow Doppler
    acquisition, 36
    for congenital heart defects, 38
    information displaying, 37
    mean velocities mapping, 39
    vs. PW Doppler, 39
    scan line evaluation, 37
    signal processing, 37
Nyquist limit, 30–32
principle, 24–25
pulmonary venous anomalies, 164–166
spectral Doppler
  artifacts avoidance, 32
  blood flow, 25–26
  combining modalities, 32
  continuous wave Doppler, 28
  flow direction, 26, 27
  hemodynamic and myocardial assessment, 33–35
laminar and turbulence, 26
noninvasive hemodynamic assessment, 26
pulsed wave Doppler, 28–30
spectral broadening, 26, 28
systemic venous anomalies, 164, 165
Doppler frequency shift, 29
Doppler invert, 42
Double-chambered right ventricle (DCRV), 246, 248
  fixed subaortic ridge, 299
  infundibular chamber, muscle bundles, 299–301
  membranous VSD, 299
  RVOT obstruction, 299–301
Double inlet left ventricle (DILV)
  atrioventricular connection, 260–261
  3D TEE, 508, 509
Double-orifice mitral valve
  morphology and management, 213–214
  TEE, 219
Double outlet right ventricle (DORV)
  anatomy, 315–317
  TEE evaluation, 317–318
  surgical considerations, 318–319
D-transposition of the great arteries (D-TGA)
  after cardiac surgery
    arterial switch operation, 327–328
    atrial switch operation, 328–329
    Rastelli procedure, 328
  anatomy, 323–324
  TEE evaluation, 324–326
  surgical intervention, 326
3D transthoracic echocardiographic (TTE) imaging
  atrioventricular septal defects, 210–212
  congenital mitral valve anomalies, 225
Ductus arteriosus. See Patent ductus arteriosus (PDA)
Duty factor, 10
Dynamic range and compression, 41
E
Ebstein anomaly
  left ventricular outflow tract lesions, adult congenital heart disease, 466–467
  morphology and management, 225–226
TEE
  anterior tricuspid valve and posterior leaflets, 228–229
  arrangement of valve attachments, 227–228
  AV junction and atrialized right ventricle, 227
  characteristic anatomic features, 227
  dysplasia and lack of coaptation, 230
  interventricular septal bulging and pancaked appearance, 229–230
  tricuspid regurgitant jet, 227, 229
Echocardiography
  arrays, 13–14
  artifacts
    acoustic shadowing, 44–45
    mirror image artifacts, 42–43
    reverberation artifacts, 43
    side lobes and grating lobes, 43–44
digital image storage and DICOM, 45–47
  imaging
    A-mode, 16
    B-mode, 16
digital conversion, 17
  interpolation, 18
  M-mode, 18
Echocardiography (cont.)
  scan converter, 17
  time and distance, 16
  two dimensional, 16
  visualization, 18

         left sided obstructive lesions, 513–515
         right ventricular to pulmonary artery conduit, 513, 516
      ventricular septal defects, 506–509
   Thrombus. See Cardiac thrombus
   Time gain compensation (TGC) controls, 41
   Tissue Doppler imaging
      diastolic ventricular function, 132–135
      left ventricular systolic function, 125–127, 129–130
      right ventricular function, 136–137
   Tissue harmonic imaging, 22–24
   Total anomalous pulmonary venous connection (TAPVC)
      cardiac type, 161
      infracardiac, 160
      mixed type, 161
      supracardiac, 159–160
      surgical considerations, 161–162
      TEE, 158
Transcatheter heart valves (THV), 415, 416, 426

Transducers
- backing (damping) material, 10
- beam formation and geometry, 10–13
- piezoelectric (PZE) effect, 9

Transesophageal echocardiography (TEE) applications
- aortic dissection evaluation, 430–432
- cardiac masses, 406–411
- heart transplantation/ventricular assist devices evaluation, 426–430
- infective endocarditis, 399–406
- lung transplantation evaluation, 430, 431
- prosthetic valves evaluation, 412–427

3D (see Three-dimensional transesophageal echocardiography (3D TEE))

Transmit focus (focal zone), 41
Transmit frequency adjustment, 41
Transmit power, 41

Transposition of the great arteries (TGA). See D-transposition of the great arteries (D-TGA)

Tricuspid atresia
- bulboventricular foramen, 257
- classification system, 257–258
- with D-transposed great arteries, 259
- systemic arterial hypoxemia, 258
- TEE evaluation, 259

Tricuspid valve dysplasia
- morphology and management, 226
- TEE, 230–231

Truncus arteriosus (TA) communis
- anatomy
  - Collett and Edwards classification, 320
  - genetic syndromes, 321
  - tricuspid truncal valve, 319
  - Van Praagh classification, 320–321
- TEE evaluation, 321
- surgical considerations, 321–323

Tumors. See Cardiac tumors

Turbulence, 26

Two-dimensional TEE imaging, left ventricular systolic function, 127–130

U

Ultrasound
- attenuation, 8
- reflection
  - acoustic impedance, 5
  - diffuse reflection, 6, 7
  - frequency independent, 7
  - impedance matching, 5
  - nonspecular reflection, 7
  - Snell’s law, 5, 7
  - specular reflector, 5–6
- sound
  - definition, 2
  - properties, 2–5

Univentricular heart. See Single ventricle

V

Ventricles and ventricular septum evaluation
- looping, 109
- ME 4 Ch view, 108
- shape, 107
- size, 108

Ventricular function evaluation
- case studies, 137–139
- imaging planes, 122
- indications, 121–122

Ventricular septal defects (VSD)
- with aortic valve endocarditis, 54
- in cardiac catheterization laboratory, 250–251
- cardiovascular malformations, adult CHD, 457–459

Ventricular septal defects (VSD) evaluation by TEE
- aortic valve comparison, 244
- color flow Doppler, 248–249
- double chamber RV, 246, 248
- mitral valve and mid-muscular defect, 247
- muscular defect, 245
- perimembranous defect, 244, 248
- posterior and anterior malalignment, conal septum, 247
- postoperative assessment, 249–250
- preoperative assessment, 249
- supracristal defect, 246
- large perimembranous, 56
- morphologic classification
  - communications with overriding semilunar valve, 243
  - conal septum, 242
  - Gerbode defect, 243
  - location of types, 242
  - malalignment defect, 242
  - perimembranous defect, 243
  - Swiss cheese septum, 243
  - true vs. surgical, 243
- single ventricle, 257, 267

Transcatheter occlusion
- Amplatzer muscular VSD occluder, 439
- device size, 442
- location, 444
- occlusion sequence, 443–444
- perventricular, hybrid closure, 442, 445
- routine right and left heart catheterization, 442
- serial imaging, 446
- TEE, 442

W

Wavelength, 2

Z

Zoom, 42
