This list contains the publications, concerning the development and applications of the bi-partial approach, which do not appear in the Reference lists, accompanying particular Chapters of the book.

Index

A
Additivity, 112 ff., 117 ff.
Agglomerative algorithms, 14, 74, 116
Aggregation rule, 104, 111 ff.
  minimum distance, 14, 111, 113–114, 116 ff.
Algorithms
  agglomerative, progressive merger
    (hierarchical), 14, 26
  bi-partial, 97 ff., 105 ff., 135
  density based, 16
    DBSCAN, 16
    mountain clustering, 16
  subtractive clustering, 16
  fuzzy c-means, 61
  k-means, 14, 48
Antecedent, 54 ff.

B
Bell number, 20
Bi-partial algorithm, 97 ff., 105 ff., 135
Block, 51–53
Block-diagonalisation, 51–52, 58

C
Categorisation, 33–36
Category, 32
Cell formation, 51
Central partition, 87
Classification, 39 ff., 58

Cluster/Clusters, 2
  constructive definition, 17
  fuzzy, 4, 11
  number of, 18
  overlapping, 11, 12
  shape, 19
Clustering problem, 4, 9
Clustering validity (quality) indices, 20, 21, 82 ff.
  external, 83
  internal, 83
Computational complexity, 107
Concept identification, 51 ff.
Consequent, 54 ff.
Constraints, 71, 132–133
Covariance matrix, 86
Cumulative distribution, 38–39

D
DBSCAN, 16
Density based algorithms, 15–16
Density function, 15
Description length, minimum, 60
Discernibility, 61–62
Distance, 2, 5–6
  partial, 2, 5
  Distance of clusters, 6, 10, 112 ff.
  Distance-proximity transformation, 25–26, 30, 32, 70–71, 127
Distribution, cumulative, 38–39
Distribution, univariate, division of, 34, 36, 38
Division of univariate distribution, 34, 36, 38
E
Eigenvalue, 64
Equidistant (data) structure, 91 ff., 128
Equidistant structure property, 91

F
Facility location, 47–50, 80, 113
Factor, 63
Factor analysis, 63 ff.
Factor number, 63–65, 84
Fit, 55 ff.
Flexible manufacturing, 51–52
Fuzzy c-means algorithm, 61
Fuzzy partition, 12

G
Generalisation, 55 ff.

H
Hierarchical clustering, 14
Hierarchy, 3–4, 107
Histogram, 36–38

I
Ideal (data) structure, 91–92
Ideal structure property, 109
Indices of clustering quality
  external, 83
  internal, 83
Indices of clustering validity, 20–21, 82 ff.
Input variable, 54 ff.

K
k-means algorithm, 14, 18, 50, 75 ff., 119

L
Lance-Williams formula, 111 ff.
Language, 10
Levels of perception, 29–30, 86, 127
Life quality, 44 ff.

M
Mathematical programming, 71–72, 89–90,
  106, 132–133
Membership degree in a cluster, 12, 85
Merger rule, 74, 98, 111 ff.
Message length, minimum, 60 ff., 104
Metaheuristics, 18
Minimum description length, 60 ff.
Minimum distance aggregation rule, 14, 111
  ff., 116 ff.
Minimum distance (property), 109
Minimum message length, 60 ff.
Minimum similarity (property), 109
Mountain clustering, 16

N
Number of clusters, 18
Number of factors, 63–65, 84
Number of partitions, 20

O
Object, 1, 3 ff.
Object description, 1, 3
Objective function
  bi-partial, 23 ff., 35, 38, 42, 44, 48, 53, 66,
  76, 79 ff.
  k-means, 14–15
Observation, see object
Opposite monotonicity (in bi-partial approach),
  71, 99, 108
Ordering, 64–66, 132 ff.
Output variable, 54 ff.

P
Partition, 2, 4
  central, 87
  fuzzy, 11 ff.
  number, 20
  proper, 4
p-center problem, 47–50
Perception levels, 29–30, 86, 127
Perception of scale, 29, 32
p-median problem, 47–50
Preference aggregation, 64–66, 131 ff.
Progressive merger algorithms, 14
Proximity, 2, 5
  partial, 5
Proximity-distance transformation, 25–26, 30,
  32, 70–71, 127
Proximity of clusters, 24, 115

Q
Quality of life, 44 ff.

R
Rule extraction, 54 ff.
Rules, 54–56

S
Scale, perception of, 29, 32
