C. ponderosa, 936
Canadian Maritimes (Mississippian of Nova Scotia and New Brunswick)
- ancient (pre-quaternary) potash evaporites, 1165–1168
Candelaria, Chile
- Cu-Au deposit, 1644–1646
Canning Basin, West Australia
- base metal concentrations, 1492
- geochemical sampling, 1491
- Pb-Zn deposits, 1491
Canopies, 540–547
- canopy-margin thrust systems, 546
- types of, 547
Capillary evaporation
- displacive halite grows, 62
- halite grows by, 65
- mudflat aggradation, 168
- phreatic zone, 167
- in sabkha precipitates, 223
Capillary evaporites in Djerid, 1128
Caprock
- formation (diagenesis of salt), 602–607
- zonation, 602
Caprock carapace of Mt Sedom, Israel, 689
Caprock-hosted Pb-Zn deposit, Gulf Coast & North Africa
- bacteriogenic limestones, 1535
- biogenic calcite forms, 1535
- calcite precipitation, 1538
- iron sulphides, 1536
- metal sulphides, 1536
- peridiapiric mineralisation, 1536
- sulphides in, 1537
- Winnfield Dome diapir, 1537–1538
Carapace, 524
Carbonate, 603
- patterns, sediments, 592–595
- primary evaporitic
  - Archaean, 38
  - laminites, 13–14
  - marine and hypersaline, 37–38
  - microbially and stromatolites, 15–32
  - ooids and peloids, 34
  - Palaeoproterozoic, 38
  - Panzerrozoic, 39
  - pisolite, 32–34
  - tepees, 35–37
- salinas
  - bacteria, 312
  - biomarker stratigraphy, 309
  - dolomite precipitation, 307–308
  - holocene lacustrine, 306
  - packstone/mudstone, 309
  - sapropel carbonates, 311
- stringer reservoirs, South Oman Salt Basin, 1057–1064
Carbonatite
- flows at Kerimas, 1617
- GIS-based compilation, 1619
Cargill saltworks, Kansas, 1346–1347
Carlsbad-Lechuguilla cavern system, 709–710
Carnallite
- ore processing method, 1103
- potash salts, 1087
- triaxial deformation experiments, 499–500
- viscosity, 497
Carrols Corner Formation, 1548–1549, 1551
Cas’kejas Formation, 1647
Castle(s)
- in gypsum karst terrain, 626
- mechanism of formation, 946
Castile Formation, Delaware Basin, West Texas, 56
Celestite
- barium in subsurface basin brines, 746
- Eocene La Tossa and Calders reefs, 743, 744
- occurrence, 738, 739
- precipitation, 743
- replacements, 742, 743
- stratiform and layered celestine deposits, 745
- strontium levels, 740–742
Central Basin-Urumieh-Dokhtar zone, 579
Central Domain, iron-oxide deposits, 1637–1638
Centrifugal and centripetal flow, 783
Century deposit
- characteristics, 1584
- Zn-Pb deposit, 1591–1592
- Chabazite, 1299, 1302, 1303
- Chalky dolomite, 644
- Chemotrophs, 860, 875
- Chert nodules, 720
- disaggregated, 1460
- lutecite in, 727
Chilean saltpetre, 1284, 1285
Chloride salts, solubility of, 499
Chlorine isotopes, as brine parenthood indicators, 141–144
Chott el Djerid, chotts zone, 1124–1129
Christmas-tree diapirs, 538, 539, 659
CHS. See Composite halokinetic sequence (CHS)
Circum-diapir drag folds, 536
Circumsalt fluid flow, 815
Classic autochthon geometries, 613
Clayton Valley, Nevada, lithium in, 1269–1271
Climatic scales, local variations in
- humidity, 99
- salinity, 100
- salt crust formation, 99–100
- sediment type, 101
- surface brine, 99
- temperature, 99
Cluster well pads, solution mining, 1320–1322
Coble creep, 499
Colemanite, 1196
- formation, 1210
- nodules, 1204
- in Turkey, 1197, 1198
Collapse dolines, 622
Collapse-related traps, 1078
Collision margin burial realm, 767–769
Columbian emeralds
- formation model, 1430
- meta-evaporites, 1427–1431
- structural and regional geology of, 1428
Index

Compactional drapes, 1080
Compactional fluids, 772
Composite halokinetic sequence (CHS), 606–607
Compressed air energy storage (CAES), 1326
Compressional salt tectonics, 553–554
downbuilt vs. reactivated (mildly squeezed)
diapirs, 568–573
gravity glide shortening, 554–560
inverted salt basins, 565–566
mild shortening, 566–568
thin-skinned fold and thrust belts, 560–565
Compression-driven salt-wing intrusion, 567, 569
Compressive deformation
worldwide occurrences of, 554, 555
Conophyton, 27
Conrad Deep, 1501
Consolidation-related flow, 772
Contact metamorphism, 1384
zones of, 1386
Continental evaporite basins, hydrologically closed, 112
Continental salt lakes, 116–120
Contractual faults, 547, 548
Contractual salt tectonism, 554
Conventional mining, potash salts
active and projected solution mines, 1095–1097
Boulby mine UK, 1094
brownfield mine expansion, 1095
evacuation costs, 1095
extraction techniques, 1094
mining, 1094
production method, 1095
provincial environmental regulations, 1095
in quaternary saline lacustrine settings, 1098–1099
room and pillar method, 1094
Saskatchewan mines, 1094
shaft excavation, 1095
stress-relief mining, 1094
sylvinite mining, 1094
types, 1093
underground ore transport, 1095
Coorong region, Australia
Coorong-style, 725
hypersaline chert-filled vugs in, 4
lagoon, 307
Lakes, dolomite precipitation, 307–308
Copper
controlled by temperature and NaCl, 1605
in Lisbon Valley, Utah, 1516–1518
Coral reefs, 589
Corella Formation, 1455–1459
Corocoro deposits, Central Andes
bed-parallel burrow traces, 1525
critical factors, 1526
gypsum, 1527, 1528
halokinetic/weld association, 1529
mineralization, 1526
mud-crack polygons, 1525–1526
ore-hosting clastic horizons, 1526
redbed copper, 1528–1529
sedimentological model, 1527
Toledo mine, 1526
vetas sediment hosts, 1527
Coronation Hill, Australia, 1638–1640
Cosmo Howley Au deposit, 1639–1640
Couette flow, salt, 506
Counter-regional system, 540
Coxco Dolomite, 1581
Craton
in Australia, 1390
in Brazil, 1474
definition, 1388
mantle tomography, 1389
Pilbara and Kaapvaal, 1393
in Precambrian regions, 1388
of southwestern Gondwana, 1441
Cretaceous Trans-Atlantic Potash, 1150–1153
Creta deposit, Oklahoma, 1529–1531
Crocodylus porosus, 287
Crustal cycling of brines, 829–835
Cryogenesia, 4
Cryogenic salts, 2, 95
Crystal-scale deformation, 499
Cyanobacteria
adaptation to increased salinity, 868, 871–873
distribution in microbial mat, 860
microbial mat, 892–894
Microcoleus chthonoplastes, 892
oil prone source rock, 840
organic productivity, 960
photosynthetic, 861
phycobilisome pigments, 861
salinity tolerance, 871–873

D
Dahl Hit at Ain Hit, 686–687
Damp salt, solution-transfer creep, 501
Danakil Depression, Ethiopia
Holocene–Late Pleistocene perennial lake
level, 44
Pleistocene halite textures, 46
quaternary potash evaporites, 1114
Dasht-e Kavir, salt desert, 299
Dasht-e Lut, sand and stone desert, 299
Dead-burned magnesite, 1287
Dead Sea, Middle East
depression, 777–778
halite caves, 688
occurrence, 688
Sedom cave, 689–690
feast or famine in, 911–914
green algae, 871
haloarchaea, 916
halophilic archaea, 912
perennial saline lakes
basin margin sediments, 365–367
deepwater halite, 361–362
deep water laminites, 362–365
density stratification, 357–361
geological settings, 353–355
water level changes, 356–357
potash
area of concentration pans, 1129
artificial salt ponds, 1130
Dead Sea Salt Work’s (DSW) production, 1133
MOP manufacture, process stream, 1131
production chemistries, 1132
residual brine, crystallization process, 1132
Death Valley, California
borate deposits, 1210, 1211, 1212, 1213
continental sabkhas, 261–262
Dedolomitisation
- definition, 727
- dolomite matrix
evaporite-derived, 735
fracture-associated dedolomite, 738
Madrid Basin, Spain, 736, 737
textural variability, 735
Deepsea hypersaline anoxic lakes (DHALS), 924, 1500, 1501
Deep Springs Lake, California, continental sabkhas, 257–258
Deep structuring process, 551
Deepwater slope setting, 596
Deformation
- Digne thrust sheet, 565
- Northern Potwar deformation zone, 563
Degrading/deflating systems, 177–178
Delamination
- in Middle Archaean, 1388
- in Pilbara craton, 1388, 1390
Delaware Basin, West Texas, 56, 631–634
Delgado Sandstone Tongue, 598–599
Dense soda ash, 1242
Depopods, 540
Desert(s)
in Atacama, Chile
- iodine, 1280–1281
- minerals, 1281
- nitrate salts, 1283–1287
causes of, 89
- coastal upwelling, 91
- continental distribution of, 86–89
earth-scale distribution, 89
- high pressure belts, 89
- Köppen climate classification, 92–94
- Namib Desert, 125
quaternary, 86
- rain shadow/adiabatic, 90–91
- saline hydrologies, 92
- strontium-isotopic composition, 89–90
Desulphohalobium retbaense, 875
Desulphotomaculum
characteristics, 945
D. nigrificans, 945
- sulphate reducing bacteria, 945
Desulphovibrio, 876
D. brasiliensis, 222, 321
D. halophilus, 875
D. oxyclinae, 875
- mesophilic isolates, 945
- sulphate reducing bacteria, 945
Detroit-method wells, solution mining, 1315
Detroit River brinefield, USA, 1347–1348
Devonian carbonates of Canada, 1080
Dextral wrench zone, 563
Diagenetic trap, 1081
Diapir(s), 299–301
- drag zones, 537
- and extension, 514–516
- fluviodeltaic sedimentation and, 590
- piercement modes for, 514
- sedimentation rate, 518–520
Diapiric solution breccias
Flinders Ranges, 655–657
Gulf Islands, 654
Hormuz formation, 655
- outcropping and subcropping areas, 653, 654
- rock flour, 653
- vs. salt ablation breccias, 657–659
Diapirism
- and differential loading, 516–518
- extensional faulting, 514
- reactive, 514
Diatom
- benthic, 873
- Laguna de Pozuelos, 878
Dibenzothiophenes (DBTs), 951, 952
Dicarboxylate anions, brines in, 1489
Diffuse dissolution
- basal anhydrite, Thailand
diagenetic basal anhydrite, 676
- isotopic signatures, 677
- Maha Sarakham formation, 675
- Maha Sarakham salt, Thailand
- landsurface, 674
- nodular anhydrite residues, 672–673
- subsurface structure, 671–672
- Palo Duro basin, West Texas, 674–675
Diffusion creep, 499
Diffusion mechanism map, of damp rock salt, 497
Digne thrust sheet, 565
Diprotodon, 286–287
Dislocation creep, 499
Dissolution-derived late burial anhydrite, 675, 760
Dissolution, evaporites
breccia
classification, 642–643
proto-conglomerates, 642
hydrocarbons
- Athabasca Tar Sands, Western Canada, 1082–1084
collapse-related traps, 1078
- compactional drapes, 1080
