## Index

### A
- Aesthetic plastic surgery, 42
- Anterolateral thigh (ALT) flap, 125
- Axillary hyperhidrosis. *See* Hyperhidrosis

### B
- Body mass index (BMI), 63
- Breast augmentation, axillary approach
  - advantages, 33
  - grade I–II tuberosity, 42–43
  - implant selection, 33
  - mammoplasty for tuberous breasts, 42–43
  - pinching test, 33
  - subfascial dissection technique (*see* Subfascial dissection technique, breast augmentation)
  - submuscular dissection technique
    - axillary incision, 34
    - clinical case, 38
    - detachment, 36
    - digital blunt dissection, 35
    - Digman dissector, 37
    - endoscopic dissection, 36
    - mobilization, 34
    - patient positioning, 33
    - prosthesis, 37
    - subcutaneous dissection, 34
- Breast-conserving surgery (BCS), 63
- Breast-conserving therapy (BCT). *See also* Endoscope-assisted partial mastectomy (EAPM)
  - breast cancer, 55
  - conventional conservative method, 55
  - cosmetic outcome, 55, 56, 60
  - endoscopic surgery, 55
- Breast reconstruction
  - partial
    - BCS, 68–79
    - clinical cases, 68
    - inframammary incision, 69, 72
    - nipple-sparing mastectomy, 77
    - postoperative MRI, 77
    - subcutaneous tunnel, 70
    - xiphoidal process, 68, 69
  - surgical technique (*see* Laparoscopically harvested omental flap)
- Brow lift
  - clinical examination, 12–13
  - complications, 14
  - contraindications, 14
  - evolution, 1
  - indications, 14
- surgical procedure
  - central pocket incision and dissection, 5
  - closure and fixation, 10
  - equipment, 2
  - inferior periosteal division, 8–9
  - infiltration, 4
  - markings, 3
  - open muscle disruption, 8–9
  - pockets connection, 7
  - preparation, 2
  - sentinel vein, 7
  - temporal lift, 11
  - temporal line of fusion, 7
  - temporal pocket incision and dissection, 6

### C
- Carpal tunnel syndrome (CTS)
  - anatomy, 109
  - complications, 111
  - diagnosis, 110
  - etiology, 109
  - history, 109
  - physical examination, 110
  - surgical technique
    - anesthesia, 111
    - antebraclial fascia, 112, 114
    - blunt tenotomy scissors, 112, 113
    - Chow elevator, 112, 114–115
    - distal incision, 112, 115–116
    - 30° endoscope, 112, 118
    - extremity, 112, 118
    - ligament, 112, 120–121
    - median nerve, 112
    - medium smooth retractors, 112, 116
    - nonadherent gauze, 112, 123–124
    - palmar incision, 112, 117
    - positioning, 111
    - postoperative care, 112
    - reverse cutting endoscopic knife, 112, 119
    - superficial retraction, 112, 113
    - surgical site, 112, 122
    - surgical wounds, 112, 122
    - treatment, 110–111
- Compensatory hyperhidrosis (CH), 82
- Cubital tunnel syndrome (CuTS)
  - anatomy, 97–98
  - complications, 100
  - diagnostic studies, 99
  - endoscopic release, 97
  - etiology, 98
Cubital tunnel syndrome (CuTS) (cont.)
  history, 98
  physical examination, 98–99
surgical technique
  anesthesia and positioning, 101–102
  antegrade knife, 101, 105–106
  blunt tenotomy scissors, 101, 103
  blunt-tipped dissector, 101, 103
  camera insertion, 101, 104
  FCU muscle, 101–102
  postoperative care, 101
  preoperative marking, 101–102
  subluxation, 101, 107
  trocar, 101, 103
  ulnar nerve, visualisation, 101, 104
  treatment, 99–100
  ulnar nerve compression, 99

D
Diastasis recti. See Rectus abdominis diastasis repair
Digital blunt dissection, 35

E
Electromyography (EMG), 110
Endoscope-assisted partial mastectomy (EAPM)
  advantage, 57
  complications, 57, 61
  SLN biopsy (see Sentinel lymph nodes (SLNs) biopsy)
  surgical technique
    cosmetic outcome, 56, 60
    direct-vision scope, 56
    dye injection, 57
    electrocautery, 59
    fluorescence images, 56
    harmonic scalpel, 56, 59
    Interceed™, 59
    lymphatic channel marking, 58
    PowerStar bipolar scissors, 56, 59
    preperitoneal distention balloon, 59
    Round-Preperitoneal Distention Balloon, 56, 59
    stained lymphatic channels, 56
    subcutaneous lymphatic channels, 56
    supine position, 56
    surgical wound, 56
    Vicryl®, 59
    Visiport™, 56, 58
Endoscopic diastasis recti repair. See Rectus abdominis diastasis repair
Endoscopic flap design and harvesting
  contraindications, 134
  handling of endoscopes
    harvesting perforator flap, 127, 129
    perforator isolation, 127, 129
    surgical instruments, 127, 128
  indications, 134
  results, 133
surgical technique
  ALT flap, 129, 130
  0°-angle, 129, 130
  anterior aspect, 129
  high magnification view, 129, 132
  location marking, 129, 132
  loose areolar tissue, 129, 131
  wide-angle view, 129, 130
Epigastric vessels, 65

F
Fascia lata, for facial reanimation
  autogenous tissue usage, 25
  complications, 28
  contraindications, 28
  endoscopic harvesting, 25
  facial paralysis, 26
  indications, 26–27
  recurrent ventral hernia repair, 25
  resistance, 26
  retrieval, 26, 27
  strippers and fasciotomies, 25
  surgical technique
    advantage, 29
    cheek and lip, 29
    dissection, 28, 29
    fascial positioning, 29
    Karl-Storz Endoscope Tele Pack™, 28
    Karl Storz HOPKINS® II Wide Angle Forward-Oblique Telescope, 28
    optical dissector attachment, 28
    postoperative success, 30
    skin incisions, 28, 29
    time of endoscopic harvest, 29
Flexor carpi ulnaris (FCU) muscle, 101–102

G
Gastroepiploic artery and vein (GEAV), 64
Gastroepiploic vessels, 66, 67

H
Headache
  frontal migraine, 17
  prevalence, 17
  surgical technique
    anesthesia, 17, 19
    cleaning, 20
    cutaneous incision, 19
    diluted carbocaine, 18
    endoscopic insertion, 20
    greater occipital nerve, 21, 22
    Nylon 1–0 sutures, 19
    patient positioning, 18
    right supratrochlear nerve, 21
    sedo-analgesia, 18
    skin markings, 18
    sodium bicarbonate, 18
    treatment, 21
  transpalpebral approach, 17
Horner’s syndrome, 82
Hydrodissection, infiltration, 4
Hyperhidrosis, 89
  conservative treatments, 81
  definition, 81
  transthoracic sympathectomy technique
    artificial ipsilateral apical pneumothorax creation, 83, 84
    chest drains removal, 83, 88
    collapsed lung, reinflation of, 83, 87
    complications, 82
    cutaneous incision, 83
    electrocauterization, 83, 87
    endoscopic rib identification, 83, 86
    general anesthesia, 83
    indications, 82

Index
modified thoracoscope, 83, 85
pleural adhesions, 83, 86
preoperative consultation, 82
sympathetic chain, 82, 85, 86
trocar insertion, 83, 84

I
Interceed™ mesh, 59
Intercostal artery perforator (ICAP), 63
Internal thoracic vessels, 68

L
Laparoscopically harvested omental flap. See also Partial breast reconstruction
contraindications, 63
indications, 63
surgical technique
breast surgery, 63–79
epigastria vessels, 65
gastroepiploic vessels resection, 66, 67
hemorrhagic complications, 65
instruments insertion, 64, 65
LCS, 64, 65
pyloric ring, 67
thermal injury, 65
transverse colon dissection, 64, 65
transverse mesocolon retraction, 67
trendelenburg position, 64, 65
Laparoscopic coagulating shears (LCS), 64
Left lateral oblique rotation, 67
Lignocaine, brow lift, 4

M
Mammoplasty for tuberous breasts, 42–43
Mastectomy, 63, 68, 69, 72, 74, 77, 78. See also Breast reconstruction
Migraine headache. See Headache
Mosquito clamps, 129, 130

N
Nerve conduction studies (NCS), 99, 110
Nipple-sparing mastectomy, 63, 77

O
Occipital headache, 21, 22. See also Headache
Omental flap. See Laparoscopically harvested omental flap

P
Palmar hyperhidrosis. See Hyperhidrosis
Partial breast reconstruction
BCS, 68–79
clinical cases, 68
inframammary incision, 69, 72
nipple-sparing mastectomy, 77
omaental flap (see Laparoscopically harvested omental flap)
postoperative MRI, 77
xiphoid process, 68, 69
Partial mastectomy, 68, 72, 74, 76. See also Endoscope-assisted partial mastectomy (EAPM)
Pectoralis major muscle, 68
Permanent bradycardia, 82
Photodynamic Eye (PDE) image, 56, 58
Poly-L-lactic acid, 57
Postoperative radiotherapy, 72, 74
Pyloric ring, 67

R
Rectus abdominis diastasis repair
abdominal wall bulging, 91
contraindications, 91
indications, 91
physiotherapy, 91
postpartum setting, 91
preoperative assessment, 91
surgical technique
adhesiolysis, 92
diagnostic laparoscopy, 92
external abdominal wall, postoperative images, 92, 95
fascia transversalis, mesh fixation, 92, 94
intracorporal suturing, 92, 93
intraperitoneal onlay mesh, 92, 93
pneumoperitoneum, 92
Prolene 2-0 sutures, 93, 94

S
Sentinel lymph nodes (SLNs) biopsy
blue-stained, 56, 58
fluorescence imaging, 56, 57
skin incision, 58
subareolar region, 56, 57
Serra–Renom endoscopic retractor, 36, 39
Splanic capsule, 66
Subcutaneous tunnel, 70
Subfascial dissection technique, breast augmentation
axillary incision, 39
clinical case, 41
endoscopic subfascial dissection, 40
fascia incision, 40
implant, 40
mobilization, 39
prosthesis, 40
Submuscular dissection technique, breast augmentation
axillary incision, 34
clinical case, 38
detachment, 36
digital blunt dissection, 35
Digman dissector, 37
dissection finalized, 36
endoscopic dissection, 36
mobilization, 34
patient positioning, 33
prosthesis, 37
subcutaneous dissection, 34
Subperiosteal, infiltration, 4
Subtemporalis, infiltration, 4
Symmastia, 36

T
Temporal region
elevation, 11
line of fusion, 7
pocket dissection, 6
pocket incision, 6
Tension-type headache. See Headache
Thoracodorsal artery perforator (TDAP), 63
Transaxillary endoscopic subfascial breast augmentation
complications, 50
patient satisfaction, 50–53
postoperative care, 48
results, 50–53
saline/silicone gel implants, 45
surgical technique
curved Mayo scissors, 48, 49
electrocautery, 48, 49
endoscope introduction, 48, 49
hemostasis, 48
incision, 48
inflatable/silicone gel tester implant placement, 48, 49
patient markings, 47
patient positioning, 48
precise pocket dissection, 48, 49
required instruments, 46
skin closure, 48
Transthoracic sympathicotomy technique, for hyperhidrosis treatment
artificial ipsilateral apical pneumothorax creation, 83, 84
cHEST drains removal, 83, 88
collapsed lung, reinsufflation of, 83, 87
complications, 82
cutaneous incision, 83
electrocauterization, 83, 87
endoscopic rib identification, 83, 86
general anesthesia, 83
indications, 82
modified thoracoscope, 83, 85
pleural adhesions, 83, 86
preoperative consultation, 82
sympathetic chain, 82, 85, 86
trocar insertion, 83, 84
TRANSVERSE colon, 64, 65
Trendelenburg position, 64, 65
Tuberculous breasts, mammoplasty, 42–43
Tupler Technique exercises, 91

U
Ulnar neuropathy, 98, 99

V
Vicryl® mesh, 59
Visiport™ Plus Optical Trocar, 56

X
Xiphoidal process, 68, 69
