Index

absolute value of a vector, 32
absolute value on $C^k_c(\mathbb{R}^n)$, 350
properties of, 351
addition of matrices, 72
affine mapping, 71
annulus, 308
arithmetic–geometric mean inequality, 238
ball, 51
$n$-dimensional of radius $r$, 319
closed, 202
basis of $\mathbb{R}^n$, 28
negative, 121
positive, 121
standard, 27
Bernoulli’s inequality, 4
Bolzano–Weierstrass property
in $\mathbb{R}$, 54
in $\mathbb{R}^n$, 54
boundary
of a closed ball, 202
boundary mapping, 469
boundary point of a set, 330
bounded
function, 254, 258
mapping, 258
set, 53
box
compact, 258
face of, 112
unit, 111
Cartesian product, 257
Cauchy–Riemann equations, 494
Cauchy–Schwarz inequality, 33
centroid, 302
chain, 467
chain rule, 147
in coordinates, 161
change of scale principle, 319
change of variable mapping
for cylindrical coordinates, 312
for polar coordinates, 307
for spherical coordinates, 313
change of variable theorem
for differential forms, 459
for multiple integrals, 310
for one-variable integrals, 281
characteristic function of a set, 285
characteristic polynomial, 184
circle in a field, 378
cissoid of Diocles, 381
closed set, 52
closure of a set, 330
common refinement of two partitions, 261
compact set, 55
complement of a set, 201
completeness of the real number system, 2
as a monotonic sequence criterion, 3
as a set-bound criterion, 2
component of a vector
normal, 40
parallel, 40
componentwise nature of linearity, 65
conchoid of Nicomedes, 379
congruence, 407
connected set, 57
continuity
  at a point, 44
  componentwise nature of, 46
  \(\varepsilon\)-\(\delta\) at a point, 269
  \(\varepsilon\)-\(\delta\) on a set, 269
  of the partial differentiation mapping, 352
on a set, 44
  pointwise, 273
  preservation under composition, 45
  preservation under uniform limit, 369
  sequential at a point, 269
  sequential on a set, 269
  uniform on a set, 273
  vector space properties of, 45
contractible space, 461
convergence
  componentwise nature of, 44
  linearity of, 44
convolution, 357
  approximation of \(C^0_c(\mathbb{R}^n)\)-functions by, 366
  approximation of \(C^k_c(\mathbb{R}^n)\)-functions by, 367
  approximation of \(I_c(\mathbb{R}^n)\)-functions by, 370
critical point theorem, 176
cross product
  definition of, 124
  in \(\mathbb{R}^n\), 421
  properties of, 125
cube
  singular, 466
  standard, 466
curl of a vector-valued mapping, 446
  in polar coordinates, 498
curve, parametrized, 384
  arc length, 385
  binormal vector, 398
  curvature, 394, 398
  equivalence, 390
  Frenet equations, 395, 399
  Frenet frame, 394
  Frenet vector, 404
  normal vector, 394, 398
  parameter interval, 384
parameter value, 384
parametrization by arc length, 391
point, 384
  rectifiable, 385
  regular, 385
  speed, 385
  tangent vector, 385
  torsion, 399
  trace, 384
  velocity vector, 385
cycloid, 386
cylindrical coordinates, 312
derivative
  of a convolution, 358
  of a differential form, 441
  of a mapping, 142
  uniqueness of, 145
determinant, 88, 101
  of a basis of \(\mathbb{R}^n\), 121
  properties of, 103
difference of sets, 356
differentiability
  componentwise nature of, 146
differential form, 424
  closed, 445
  derivative of, 441
  exact, 445
  pullback of, 450
  standard presentation of, 427
differential forms
  integration of, 425
  meaning of integration of, 434
  product rule for, 442
  syntax of, 424
  wedge product of, 439
differentiation under the integral sign, 303
Dirac delta function, 348, 362
directional derivative, 186
discrete set, 58
distance in \(\mathbb{R}^n\), 37
  properties of, 37
divergence of a vector-valued mapping, 446
  in polar coordinates, 498
divergence theorem, 491
determinant, 88, 101
equivalence relation, 391  
Euclidean number, 376  
Euclidean space, 23  
Euclid’s least area problem, 233  
Euler’s identity for homogeneous functions, 465  
extreme value theorem, 4, 56  

field axioms, 1  
flow integral  
  2-dimensional  
    coordinate, 419  
    intrinsic, 419  
  3-dimensional  
    coordinate, 419  
    general, 420  
flux integral  
  2-dimensional  
    coordinate, 419  
    intrinsic, 419  
  3-dimensional  
    coordinate, 420  
    general  
    coordinate, 422  
    intrinsic, 420  
Fubini’s theorem, 294  

fundamental theorem of integral calculus  
  first version, 5  
  general, 477  
  one-variable  
    first version, 279  
    second version, 280  
  second version, 5  
gamma function, 320  
Gauss’s theorem, 491  
gradient, 186  
gradient of a scalar-valued function, 445  
Gram–Schmidt process, 41  
graph of a function, 286  
Green’s identities, 493  
Green’s theorem, 487  
  geometric interpretations of, 489  
harmonic equation, 447  
helix, 386  
Hölder’s inequality, 240  

homogeneous function, 165, 465  
homotopy, 461  

identity matrix, 75  
implicit function theorem, 223  
induction theorem, 3  
inner product  
  of two vectors, 31  
  properties of, 31  
integrability criterion, 265  

integral  
  iterated, 294  
  lower, of a function over a box, 263  
  of a $C^0_c(\mathbb{R}^n)$-function, 357  
  of a differential form over a chain, 467  
  of a differential form over a surface, 425  
  of a function over a box, 263  
  of a function over a surface, 415  
  upper, of a function over a box, 263  
integral curve, 192  
interior point of a set, 142  

intermediate value theorem, 5  
interval  
  compact, 253  
  inverse function theorem, 206  
  inverse image characterization of continuity, 202  
  inverse image of a mapping, 202  
  isolated point of a set, 52  

Jacobian matrix, 142  

known-integrable function, 291, 368  

Lagrange multiplier condition, 240  
Laplace’s equation, 169, 447  
Laplacian operator, 492  
length  
  of an interval, 254  
level set  
  of a function, 188  
  of a mapping, 213  
limit point of a set, 52  
line in $\mathbb{R}^3$, 128  
line in a field, 378  
linear combination, 28  
linear equation  
  homogeneous, 87
inhomogeneous, 87
linear invertibility theorem, 95
linear mapping, 60
transpose of, 70
linearity of differentiation, 147
lower sum, 255, 259

mapping
affine, 71
component functions of, 46
from \(\mathbb{R}^n\) to \(\mathbb{R}^m\), 41
from \(A\) to \(\mathbb{R}^m\), 41
linear, 60
rigid, 406

matrix, 65
echelon, 84
elementary, 80
indefinite, 180
lower triangular, 86
negative definite, 180
new column of, 84
old column of, 84
orthogonal, 97, 406
positive definite, 180
recombine, 80
scale, 80
second derivative, 177
skew-symmetric, 97
transpose of, 77
transposition, 80
triangular, 93

matrix inversion algorithm, 85

matrix multiplication
properties of, 75

max/min test
general, 184
two-variable, 181

mean value theorem, 5

modulus
of a vector, 32
properties of, 33
mollifying kernel, 357

multilinear function, 152

multiplication
matrix-by-matrix, 73
matrix-by-vector, 66
scalar-by-matrix, 73

nilpotence of \(d\), 444

norm of a linear mapping, 71

open set, 201
order axioms, 2
ordered \(k\)-tuple from \(\{1, \ldots, n\}\), 424
increasing, 426
orthogonal vectors, 38

Pappus’s theorem, 318
parallelepiped, 114
face of, 114
parameter domain of a surface, 410
partial derivative, 154
mixed, 167
second-order, 167

partition
of a box, 258
of an interval, 254
path-connected set, 58
permutation, 99
inversion in, 100
sign of, 100

persistance of inequality, 49
plane in \(\mathbb{R}^3\), 128

point in a field, 378
polar coordinates, 306

product rule
for differential forms, 442
multivariable, 149

pullback
contravariance of, 454
properties of, 452
pullback of a differential form, 450
pullback theorem, 459
pullback–determinant theorem, 451
pulse function, 355
pushforward of a surface, 468

quotient rule
multivariable, 149

real number system, 1
refinement of a partition, 260
reparametrization of a surface, 416
orientation-preserving, 436
orientation-reversing, 436

saddle point, 178
sawtooth function, 364
scalar multiplication, 25
sequence, 42
  convergence of, 43
  limit of, 43
null, 42
sequential characterization
  of bounded sets, 54
  of closed sets, 52
  of compact sets, 55
  of limit points, 52
simplex, 474
  n-dimensional of side r, 306
unit in \( \mathbb{R}^3 \), 301
size bounds for a vector, 37
smooth function, 347
smooth mapping, 411
Snell’s law, 235
special orthogonal group, 406
spherical coordinates, 313
Stokes’s theorem, 490
  geometric interpretation of, 491
subbox of a partition, 258
subinterval of a partition, 254
subsequence, 53
substitution
  forward, in one-variable integrals, 281
  inverse, in one-variable integrals, 282
sum of sets, 356
support of a function, 349
surface, 410
Taylor polynomial, 7
Taylor remainder, 8
  integral form, 20
  Lagrange form, 12
Taylor’s theorem, 11
test approximate identity, 362
test function, 349
the continuous image of a compact set is compact, 56
topological property, 57
transpose
  of a linear mapping, 70
  of a matrix, 77
triangle inequality, 35
  full, 36
upper sum, 255, 259
Vandermonde matrix, 108
vector addition, 24
vector space axioms, 26
vector space over a field, 27
volume
  k-dimensional in \( \mathbb{R}^n \)
  of a parallelepiped, 413
  of a surface, 415
  of a box, 258
  of a set, 285
volume form, 436
volume-zero criterion, 286
wedge product, 439
  properties of, 440
  skew symmetry of, 440
