# Table of Illustrations

## Figures

| Fig. 1.1 | Sports enjoyed in ancient Egypt: weightlifting, athletics and archery |
| Fig. 1.2 | Sport is for everyone |
| Fig. 2.1 | The benefits of sport and exercise |
| Fig. 2.2 | The reasons for participating in sport and exercise |
| Fig. 2.3 | Brain activity of children before and after exercise: a 20 minute walk |
| Fig. 2.4 | Children in sport |
| Fig. 2.5 | The popularity of sport |
| Fig. 3.1 | The physiological interrelationship between popular sports |
| Fig. 3.2 | Influential factors in becoming a top-level athlete |
| Fig. 4.1 | A schematic illustration of the aim of 10 km running |
| Fig. 4.2 | The training aims for a footballer |
| Fig. 4.3 | Physiological components of training and performance |
| Fig. 4.4 | The limitations of training and performance |
| Fig. 5.1 | Oral health risk factors and athletes |
| Fig. 6.1 | Energy pathways of physical exertion in exercise and sport |
| Fig. 6.2 | Specifics of nutrition for athletes during physical exercise |
| Fig. 6.3 | High-frequency ingestion of carbohydrates during an endurance event |
| Fig. 6.4 | Examples of dental erosion |
| Fig. 7.1 | The correlation between cumulative weekly training and tooth decay |
| Fig. 7.2 | Opportunistic infections of the oral cavity |
| Fig. 8.1 | Factors affecting saliva production |
| Fig. 8.2 | The causes of hyposalivation during exercise |
| Fig. 8.3 | The connection between hyposalivation in sport, demineralisation of dental surfaces and oral infections |
| Fig. 9.1 | Stress, athletes and performance |
| Fig. 9.2 | Oral and general health consequences of bruxism |
| Fig. 9.3 | Consequences of bruxism: high-level endurance athlete |
| Fig. 9.4 | Oral complications of anorexia and bulimia nervosa, images courtesy of Dr. Christel Dessalces Olenisac |
Table of Illustrations

**Fig. 10.1** Dental traumatology: a risk in all sports
**Fig. 10.2** Dental traumatology in sport: incisors at risk
**Fig. 10.3** Orofacial traumatology: high and medium-risk sports
**Fig. 10.4** Factors predisposing athletes to dental trauma in sport
**Fig. 10.5** Preventing orofacial traumatology in sport: the use of mouthguards
**Fig. 11.1** Factors influencing athletes’ prioritisation of oral health
**Fig. 12.1** The complexes of anaerobic bacteria common to periodontitis based on Socransky’s classification
**Fig. 13.1** Abrasion and attrition: non-carious lesions
**Fig. 13.2** Aetiology of dental erosion
**Fig. 13.3** The athlete and dental erosion
**Fig. 13.4** Stages of acidic dissolution of enamel
**Fig. 13.5** Cross-sectional imagery: demineralisation of enamel
**Fig. 13.6** A comparison of mineral content between mineralised and demineralised dental tissue
**Fig. 13.7** Examples of dental erosion
**Fig. 13.8** Examples of the BEWE score 0–4
**Fig. 13.9** Principle locations and morphology of different erosion types
**Fig. 13.10** Factors involved in caries development, adapted to athletes
**Fig. 13.11** Schematic evolution of the carious process
**Fig. 13.12** The different stages of dental caries severity
**Fig. 14.1** Oral consequences of persistent hyposalivation
**Fig. 15.1** Mandibular laterognathia
**Fig. 15.2** The relationship between occlusal interference and posture
**Fig. 15.3** Dental occlusion and repercussions on podal pressure (imagery courtesy of Dr. Valerie Rasigrade 2016)
**Fig. 15.4** Hyperdivergent profile and anterior open bite in a cross-country skier
**Fig. 15.5** Orthodontics: transformation of class II angle to class I
**Fig. 15.6** Corrective orthognathic surgery of a receding jawline
**Fig. 16.1** Synkinesis of the mandible
**Fig. 16.2** Synkinesis of the tongue
**Fig. 16.3** Synkinesis of the lips
**Fig. 17.1** From the oral cavity to secondary inflammatory sites
**Fig. 17.2** Oral infection and chronicity of Achilles tendinosis
**Fig. 18.1** An example of a combined visual and verbal scale used to evaluate dental pain
**Fig. 18.2** Sources of oral pain
**Fig. 18.3** Examples of dental lesions provoking severe pain
**Fig. 19.1** The interrelationship between the dental practitioner and health professionals
**Fig. 19.2** The specific management of athletes in dentistry
**Fig. 19.3** A schematic treatment plan for athletes
**Fig. 20.1** Prevention and risk management of athletes
Fig. 20.2 Mandibular fractures in sport
Fig. 20.3 Individualised mouthguards made from dental impressions
Fig. 20.4 General principles of management of dental caries and erosions in athletes
Fig. 20.5 A therapeutic classification for dental caries and erosion
Fig. 22.1 Application for a therapeutic use exemption

Table 21.1 Principles of dental trauma care in sports dentistry
Table 22.1 A summary of substances prohibited in sport
A
AASs. See Anabolic androgenic steroids (AASs)
Achilles tendinitis, 108–109
Aerobic metabolism, 34
Allergic theory, 108
American football, 5
Anabolic androgenic steroids (AASs), 142–143
Anaerobic pathways, 34
Ancient Egypt, 3–4
Anorexia nervosa, 55
Anxiety, 52–53
Athletes, 151
definition, 16
dental caries and erosion, 38
energy consumption, 34–36
extra-oral examination, 121
factors influencing, 67
greatest risk, 62–63
influential factors, 16–17
intra-oral examination, 121
nutrition, 36–37
oral health, 29–30
oral infection, 108–109
periodontal disease, 71
precocious alveolysis, 72–73
quality of life, 114–115
stress, 52
synkinesis, 100–102
TUE, 140, 141
Athletic patients
effective prophylactic measures, 125
germetomies, 127
intra-oral protections, 127–128
prevention management strategy, 125–126
symptomatic treatment, 130
therapeutic solutions, 129
traumatology, 127–128
Athletic patients care
clinical examination, 119, 121
consultation, 120–123
dental practice, 119
multidisciplinary component, 119–120
treatment plan, 123
Athletic performance, 22

B
Bacteremia, 106
Baseball, 5
Basic erosive wear examination (BEWE), 80–81
Basketball, 5
Beta-2 agonists, 144
Beta-blockers, 148
Bruxism, 52–54
Buccal respiration, 47
Bulimia nervosa, 55

C
Cannabinoids, 147
Children participation, sports, 9–10
Cumulative training, 41–42

D
Dental care team, implications, 7–8
Dental caries, 37–38
aetiology, 83
carious process, 83
diagnosis, 83–85
different stages, 85
management, 129
prevalent, 82
therapeutic classification, 130
treatment, 84–85
Dental consequences
caries, 82–85
erosion, 75–82
Dental erosion. See Erosion
Dental occlusion and performance
affects, 91
biomechanical consequences, 91
malocclusion, 93–96
management, 91
mandibular laterodeviation, 92–93
and movement, 94–95
occluso-postural equilibrium, 91–92
orthodontic treatment, 96–97
and podal pressure, 94
posture modification, 92–96
respiration, 95
Dental pain
athletic performance, 113–114
causes, 112, 113
definition, 111
mucosal origin, 111
prevention, 112, 113
quality of life, 114–115
Dental traumatology
explosive anaerobic exercise, 60–61
greatest risk, 61–63
high-and medium-risk sports, 62
numerous factors, 59
prevalence, 60
prolonged aerobic exercise, 60
prophylactic measures, 59
reduce risk, 63–64
Dental trauma treatment, 133–138
Dentistry
athletic patient, 119–123
doping, 139–148
evaluation in, 111–112
implications, 7–11
sports-related immunomodulation, 43–44
Diuretics, 145
Disabled athletes, sports, 10–11
Doping
AASs, 142–143
alcohol, 147
beta-2 agonists, 144
beta-blockers, 148
cannabinoids, 147
dental practice, 139–140
diuretics, 145
glucocorticoids, 147
growth factors, 143
hormone, 144–145
masking agents, 145
metabolic modulators, 144–145
narcotics, 147
peptide hormones, 143
prohibited substances, 142–145
stimulants, 145–146
TUE, 140, 141
WADA, 139–141
Dry mouth syndrome, 87–89

E
Eating disorders, 55–57
Endurance sports, 13
Energetic consumption, 35
Erosions, 38
aetiology, 76–77
characteristics, 80
clinical examination, 80–81
complimentary examinations, 81–82
demineralisation, 78–80
diagnosis, 80
form and localisation, 81, 82
management, 129
prevalence, 75
severity, 80–81
sports drinks, 77–78
therapeutic classification, 130
therapeutic solutions, 82
types, 76, 82
vulnerability, 77
Explosive sports, 33

F
Fédération Internationale de Football
Association (FIFA), 5
Focal infections, 105

G
Gingival hypertrophy, 73
Global expansion, 5–6
Growth factors, 143

H
Health professionals, 119, 120
High-intensity sessions, 42–44
Hormone, 144–145
Hydration, 46
Hyposalivation, 45
buccal respiration, 47
causes, 48
heat production and homeostasis, 46–47
oral consequences of, 88
processes, 45
Index

risk for oral health, 47–49
saliva production, 45–47
stress, 46

oral bacteria spread, 106
periodontal disease, 105–106
systematic spread, 105–106
Oral mucosa, 47
Orofacial traumatology. See Dental
traumatology
Orthognathic surgery, 96

M
Mandibular laterodeviation, 92–93
Manducator system, 99–102
Masking agents, 145
Maxillofacial traumatology. See Dental
traumatology
Men and women, 4–5
Metabolic modulators, 144–145
Micro-organism, 106–107
Modern-Day American Sport, 5–6
Mouthguards, 127

N
Narcotics, 147
Neurovegetative theory, 108

O
Opportunistic infections, 43
Oral consequences, 87–89
Oral health
anxiety, 52–53
athlete’s energy requirement, 34–36
definition, 27
dental caries and erosion, 37–38
dental treatment, 66–67
eating disorders, 55–57
education, knowledge and motivation,
66, 67
guidelines from WHO, 28
nutrition for athlete, 36–37
physical exertion, 33–34
quality of life, 114–115
risk factors, 28, 30, 65
saliva, 47–49
self-medication, 65–66
sports federation roles, 30
stress, 52–53
Oral hygiene, 76, 77, 126
Oral infection
Achilles tendinitis and, 108–109
micro-organism, pathways of,
106–107

P
Participation, children in sport, 9–10
Peptide hormones, 143
Pericoronitis, 112, 126
Periodontal alveolysis, 71–73
Periodontal consequences, 71–73
Periodontal disease, 105–106
Physical sports
activity, 14
definition, 13–14
different categories, 13–14
exercise, 14
physiological interrelationship, 15
types, 14–15
Physical training
aim, 19–20
during competition, 22
elements, 19
long-term limitations, 22
parameters, 21
Popularity, 7, 9, 11
Precocious alveolysis, 71–73
Prohibited substances, 142–145
Psychological traits
body image, 54–56
stress and anxiety, 51–54
Psychology, 51–57

Q
Quality of life, 114–115

R
Regulatory medical surveillance,
29–30

S
Saliva
production, 45–47
roles, 47–49
Self-medication, 65–66
Sensory proprioceptors, 91
Sleep, 111
Society, in sport, 3
Sports-related immunomodulation, 43–44
Sports-related orofacial trauma, 133–138
Stimulants, 145–146
Stress
  athletes and sport, 52
  oral health, 52–53
  physical health, 51
  repercussions, 53–54
Sugar, 37
Swimmers’ calculus, 73
Synkinesis
  athletes, 100–102
  lips, 102
  mandibule, 100
  oral constituents, 99
  phenomenon, 99–100
  physical exertion, 100–102
  tongue, 101

T
Telemedicine, 67
Tendinosis, 108–109
Therapeutic Use Exemption (TUE), 140, 141
Thermogenesis, 45–46
Training intensity, 42
Traumatology, 127–128

V
Verbal rating scales (VRSs), 112
Visual analogue scales (VASs), 112

W
World Anti-Doping Agency (WADA), 139–141
World Health Organisation (WHO), 27

X
Xerostomia. See Hyposalivation
