## Index

**A**
- Additive wavelet transform (AWT), 133
- Aliasing rejection
  - coefficients, 62
  - comb filters, 63–66
  - pole-zero plots, 63
  - symmetric polynomial, 62
- Artificial bee colony (ABC), 98, 99

**B**
- Biorthogonal filter banks, 125
- Black frame insertion, 147
- Brovey Transform algorithms, 132

**C**
- Canonical signed digit (CSD), 12
- Cascaded integrator-comb (CIC), 11
- Center Frequency Detection Using Center of Mass, 194–195
- Centroid method, 193, 194
- Cognitive radio (CR), 83, 172
  - capability and reconfigurability, 171
  - cognitive cycle, 171
  - development, spectrum utilization, 170
  - entities, 171
  - FCC, 170
  - monitoring, 170
  - secondary users, 169
  - signal processing applications, 169, 170
  - spectral holes, 171
  - spectrum analysis, 171, 172 (see also spectrum sensing)
  - wideband spectrum sensing, 169, 170
- Comb filter
  - decimation stage, 60
  - multiplierless filter, 61
  - passband droop, 60
  - signal spectrum, 59
  - stages, 59
  - system function, 59
- Corrector filters method, 74–77
- Cosine-modulated filter banks (CMFBs), 83, 182, 183
- CS algorithm
  - amendments, 97
  - assumptions, 97
  - MCS technique, 97
  - parameters, 106
  - proposed method, 105
- Cuckoo search algorithm, 96, 97
- Cyclostationary feature detection (CFD) technique, 176

**D**
- Decimation, 59
  - comb decimation stage, 60
  - down-sampling filter, 3
- Digital filter bank
  - amalgamation, 38
  - filtering operation, 38
  - M-channel filter bank, 41–43
  - two-channel FB, 38–40
- Digital front-end
  - phase-shaping filter, 11–14
  - rectangular-to-polar convertor, 14–19
- Discrete Fourier transform (DFT), 178

Down-sampling system
  multi-rate system-level design, 22–23
  multi-standard digital radio, 21
  sigma–delta ADC, 21

E
Energy detection method
  CFD, 176
  cyclostationary features, 176
  MF, 175
  subbands, 174, 175
  traditional, 173, 174

F
Filter architecture
  HF FIR filters, 25
  LF FIR filters, 26–28
  trade-off of power consumption, 1
Filter banks
  architecture based, 179–180
  biorthogonal, 125
  CMFB, 183
  CMT, 183
  concept of, 178
  designing prototype filters, 178, 180
  DFT, 181
  frequency response, prototype filter, 182
  frequency shifted version, 182
  low-pass prototype filter, 178
  near-perfect reconstruction (NPR), 180
  OFDM, 178
  optimization techniques, 181
  orthogonal, 124
  perfect reconstruction (PR), 180
  polyphase, 180, 183, 185
  prototype filter, 181
  QMF, 123
  spectrum sensing, 185–186
  types, 178
  Filter-bank-based pansharpening (FB), 133
  Finite impulse response (FIR) filter, 22, 62
  Fractional derivative (FD), 85
    convergence time, 48
    multirate filter bank, 49
    optimization techniques, 48
  Fractional derivative constraints (FDC), 88–96
  Frame duplicate and skipping technique, 146
  Frame insertion, 147
  Frame rate conversion (FRC), 144
    duplicate and skipping, 146
    insertion, 147
  three-two pull down technique, 146
  low bit rate video coding, 145
Frame rate up-conversion (FRUC), 150–154
  hardware architecture specifications, 165
  high refresh rate display devices, 146
  higher video resolution, 164
  ME (see Motion estimation (ME))
  motion compensation (MC), 149, 157–159
  motion estimation (ME), 149
  motion vector mapping, 156–158
  motion vectors (MVs), 149
  MV processing (see Motion vector processing)
    post-processing, 159–161

G
Generalized comb filter (GCF), 61
Generalized Laplacian Pyramid (GLP), 133
Genetic algorithm (GA), 47
Gram–Schmidt (GS) pansharpening technique, 132

H
High efficient video coding (HEVC), 145
High refresh rate display device, 145
High-frequency (HF) FIR filters, 25
High-pass filtering (HPF), 133

I
Image decomposition, 126
Image reconstruction, 126, 127
Infinite impulse response (IIR), 84
Interchannel/intercarrier interference (ICI), 200, 202, 210–214
Intersymbol interference (ISI), 200, 203, 210–213

L
Lagrange polynomial approximation, 47
Levenberg–Marquardt (LM) algorithm, 45
Linear time-invariant (LTI) system, 36
Liquid crystal display (LCD), 143
Low bit rate video coding, 145
Low-frequency (LF) FIR filters, 26–27

M
M-channel filter bank, 41, 43, 86–88
Minor component analysis (MCA), 49, 85
CMFBs, 84
design parameters, 102, 103, 105, 106, 109, 111, 113
differentiability and continuity, 84 and FDC, 88–96
iteration, 102
learning algorithm, 93–96
M-channel CMFB, 100
and optimized FDCs, 100
proposed method, 115–116
Modified cuckoo search algorithm, 97–98
Modified discrete Fourier transform (MDFT) technique, 45
Motion compensation (MC)
appropriate ratio of MVs, 158
bilinear and adaptive weighting MC, 158
block-based operations, 158
estimation, 159
forward and backward MVFs, 159
intermediate frame, 157
MC technique, 157
OBMC, 158
Motion estimation (ME)
