A
Adjacent cranial facet violation, 118
Adjacent segment disease (ASD), 117
Adult scoliosis, 19
Airway maintenance, 102
Anesthesia, 102, 107
Anterior column reconstruction (ACR), 164–166
additive anterior plating, 172
expandable cages, 169
historical overview, 164
minimal invasive approach
  lumbar spine, 166
  thoracic spine, 166
PEEK, 171
PMMA, 172
posterior instrumentation, 172
preoperative planning, 168
in spine deformities, 174
thoracolumbar spine
  anatomical consideration, 164–165
  biomechanical consideration on, 164
  titanium mesh, 171
Anterior longitudinal ligament (ALL), 179
Anterior lumbar interbody fusion (ALIF)
  procedure, 134, 158
Anterolateral retroperitoneal approach, 59
AQrate® system, 28, 30
ASPEN (Lanx), 129
Awake transforaminal lumbar interbody fusion
  (Awake TLIF), 102–105
interbody fusion, 104
patient positioning, 102
pedicle screws, 104
post operative care, 105
rod fixation, 104
wound closure, 105

B
BacFuse (Pioneer), 130, 131
Bone graft, 164
Bone morphogenetic protein (BMP)-2, 108
Boucher technique, 154
B-Twin expandable implant, 77–79

C
Cage dimension, 169
Cage migration, 108, 110
Carbon fiber cage, 171
Coflex Rivet, 133
Cone-beam CT (CBCT), 2
Congenital malformation, 55
Coronal deformity, 61
Cortical bone, 113, 117, 119
Cortical bone trajectory (CBT), 113–124
indications
  pathology, 114–116
  spinal level, 116–117
limitations
  rotational spinal deformity, 120–121
  spondylolysis, 118–120
pars and pedicle fractures, 122
pedicle screw loosening, 123–124
prevention, 117–118
slip reduction, 122–123
vs. TT, 114, 115
Creeping substitution, 172
Cross-link connector, 120
Cumulative summation test (CUSUM), 41
D
- da Vinci surgical system, 45
- Degenerative scoliosis, 61
- Degenerative spondylolisthesis, 94
- Direct lateral interbody fusion (DLIF), 158
- Discectomy, 102, 179
- Disc herniation, 94, 110
- Dynamic stabilization, 127

E
- Endoscopic spine surgery, 69
- Enhanced recovery after surgery (ERAS®), 107
- Expandable cages, 167, 168, 170
- Exparel®, 108
- Extreme lateral interbody fusion (XLIF), 158
- clinical aspects, 60–61
- imaging evaluation, 61
- limitations, 60
- rationale, 62–65

F
- Facet finder, 149, 160
- Facet fixation, 160
- clinical applications, 144, 145
- facet wedge, biomechanical evaluation of, 153–157
- history, 143, 144
- indications, 157–159
- modern minimal invasive device, 145, 146
- operation technique, 147, 153
- Facet Opener, 148
- Facet wedge system, 160
- biomechanical evaluation, 153, 155, 157
- features, 147
- indications, 157–159
- Fergusson A/P projection, 71
- Finite element method, 120, 123
- Fixation strength, 115
- Foraminoplasty, 73, 77, 80, 81
- Fractalkine, 133

I
- Image-guided spine surgery (IGS), 15
- Insertional torque, 113, 117
- Interbody fusion, 104
- Interbody graft, 120, 123
- Interspinous fixation devices (IFD)
- ASPEN (Lanx), 130
- BacFuse (Pioneer), 130
- biomechanics, 132–135
- goals, 135
- historical background, 128
- surgical indications, 135, 136
- surgical technique, 131
- Interspinous posterior device (IPD), 127
- Intraoperative CT scan, 15, 17, 18, 20
- Isthmic spondylolisthesis, 118
- Isthmic-type spondylolisthesis, 94

J
- Jacking-up mechanism, 77
- Jamshidi needle, 104

K
- Kambin’s triangle, 102, 110
- K-wires, 50, 95, 151
- Kyphotic deformity, 61

L
- Lateral retroperitoneal approach, 60
- Low-dose CT scan, 52
- Lumbar spine, 102, 166
- Lumbar spine surgery, 7–10
- cost-effectiveness, 11
- free-hand vs. navigated technique, 6–7
- learning curve, 10
- radioexposure, 10
- screws’ placement, 5–6
- spinal navigation
  - limitations, 9–10
  - in pediatric patients, 7
  - uses, 8
- 3D navigation systems, 7
- 3D spinal navigation, 1

M
- Magnetic resonance image (MRI), 102
- Master-slave systems, 25
- Mazor X™ spine assist system, 26–28
- Metamere, 129
- Methylmethacrylate, 164
- Minimally invasive approach, 131
- Minimally invasive kit, 27
- Minimally invasive transforaminal lumbar
  interbody fusion (Mi-TLIF)
  - indications, 94
  - patients population, 94
  - technique, 95
- Minns device, 128
Motor evoked potentials (MEPs), 75
Mounting platform, 27
Multi-detector CT (MDCT), 2
MySpineMedacta system, 51–57
    preoperative planning, 53

O
Opticage™, 79
OptiMesh cage, 104
Optiport, 81
Osteoporosis, 114, 123
Oswestry Disability Index (ODI), 94
Oswestry scale, 139, 140

P
Pars interarticularis, 118, 119, 122, 124
Passive array, 15
Pedicle fractures, 122
Pedicle screw fixation (PSF), 127, 139
    custom-made guide, 50–51
    3D-printed tubular guide, 51
Pedicle screws, 5, 16, 95, 104, 117, 122, 123
    loosening, 123–124
    malposition, 49
    salvage, 115
    in spondylolytic vertebrae, 119
Percutaneous fusion surgery, 70–77
Peteron technique, 27, 41
Polyether-ether-ketone(PEEK), 128, 164, 171
Poly-methylmethacrylate (PMMA), 172
Posterior fixation, 63–67, 86
Posterior longitudinal ligament (PLL), 179
Posterior longitudinal ligament complex (PLC), 168, 172
Posterior lumbar interbody fusion (PLIF), 41, 134
Posterolateral transforaminal approach, 77–86
    for percutaneous fusion surgery, 70–77
    posterior fixation devices, 86
    surgical technique
    B-Twin expandable implant, 77–79
    percutaneous PerX 360°™System, 79–86
Psoas splitting, 167

R
Radiation exposure, 10, 11, 33
Recombinant human bone morphogenetic protein (rhBMP)-2, 104, 108
Reference array, 15, 17
Renaissance, 25, 26
Retroperitoneal approach, 175
Retroleural approach, 166
Robot-assisted pedicle screw placement, 39–40
Robotic arm guidance system
    AQrate® system, 28
    current literature, 29–32
    future of, 33
    learning curve, 33
    Mazor X™ spine assist system, 26, 28
    motivations, 24–25
    radiation exposure, 33
    ROSA™, 28
    SpineAssist robot, 38–45
    ROSA™, 28, 29, 44

S
Safe zone, 6
Salvage, 115
Scoliosis, 177
    correction, 182
Screw malposition, 24, 33
Screws placement, 5
Slip reduction, 122–123
Somatosensory evoked potentials (SEPs), 75
Spinal deformity
    correction, 179–180
    rotational, 120–121
Spinal navigation, 2
    operative setting for, 4
    in pediatric patients, 7–8
    uses, 8
SpineAssist robot
    cranial spinous process, 38
    limitations, 45
    open procedure, 38
    percutaneous procedure, 38
    radiation exposure, 42–44
    radiolucent T-frame, 38
    randomized control trial, 39, 41
    screw trajectories, 44
    single-centre randomized control trial, 42
    spinous processes, 38
    in transpedicular vertebroplasty, 44
Spine deformities, ACR in, 174
Spine fracture, 181
Spine tumor, 181
Spinous processes, 27, 131, 135
Spondylolysis, 118–120
Superior articular process (SAP), 73
Supervisory-controlled systems, 25
Surface matching technique, 3
