Index

A
Acute cholangitis, 198
alternatives to endoscopic decompression, 57
diagnosis of, 55
interval cholecystectomy, 58
management of, 55
mild, 56
moderate to severe, 57
Acute cholecystitis, 50–52, 250, 253
Acute obstructive cholangitis, 37
Acute pancreatitis (AP), 38–40, 49, 52, 54, 55, 225, 249
Antegrade sphincterotomy, 159, 170, 171

B
Bile composition, 31
Biliary colic
definition, 35
preoperative decision-making algorithm, 50–52
Biliary disease, historical data in, 3, 4
Biliary obstruction, 34, 36, 55, 91, 160, 166, 198, 219, 222, 244–246
Biliary scintigraphy, 45
Bilioenteric bypass
choledochoduodenostomy, 6
patient position and operating room setup, 189
trocars placement, 190, 192
hepaticojejunostomy, 192–195
primary stones, 187–188
Bilioenteric anastomoses, 247, 248

C
CBDE. See Common bile duct exploration (CBDE)
Cholangitis, 200
acute obstructive cholangitis, 37
with Charcot's triad, 36
diagnosis of, 37
laboratory finding, 40
mild, 37
moderate, 37
mortality, 37
severe, 37
Cholecystectomy, 236
cystic duct ligation, 122
drain placement, 123
Choledochoduodenostomy, 6
patient position and operating room setup, 189
trocars placement, 190, 192
Choledocholithotomy, 4, 5
Choledochoscopic techniques, 116, 117, 120, 135, 140, 141, 147, 154, 182
Choledochotomy, 113, 116, 132
closure, 136
longitudinal incision, 131
OCBDE, 180
outcomes, 140, 141
stone extraction, 133–134, 136
supraduodenal common bile duct, 131
T-tubes closure, 138, 139
Cholesterol stones, 145
bile acid/salt deficiency, 32
risk factors, 32, 33
Clinical syndrome
  asymptomatic, 34
  biliary colic, 35
  CBDS syndromes, 34
  cholangitis, 36–37
  gallstone pancreatitis, 38–39
  jaundice, 35–36
Common bile duct exploration (CBDE), 166–169, 200
  antegrade sphincterotomy, 170, 171
biliary drains
  internal-external biliary drains, 161, 162
  nasobiliary drains, 163
  T-tubes, 160, 161
biliary stents, 163
  endoscopic stents placement, 164, 165
  metal stents, 166, 167
  plastic stents, 165
  stent-related complications, 168, 169
  surgical stent placement, 168
EBPD, 169, 170
Common duct exploration (CDE), 52, 58–60, 70, 76, 106, 113, 122, 161, 163, 164, 170, 236, 264
Computed tomography (CT), 41–43, 222
Computed tomography cholangiography (CTC), 222
Contribution margin, 274, 275
Cystic duct, 11, 17, 18, 72, 73, 75–77, 86, 94, 95, 97, 99, 109, 110, 115, 117, 152, 154, 201, 202, 248, 255, 258
  anatomical variations of, 201
  balloon clearing of, 257
  configuration, 12–14
  catheter placement, difficulties in, 78–80
  ligate, 122, 123
  normal variant of, 71
  preparation, 111–114
  scope insertion, 119
  stone impaction, 150

D
De novo stones, 52, 188
Duodenoscope, 72, 170, 203–205, 208, 212, 226–228, 237, 241, 277

E
Early choledocholithotomy, 5, 6
Early operative biliary fluoroscopy, 8
EBPD. See Endoscopic balloon papillary dilation (EBPD)
Economic considerations, 273
  accounting terminology, 274, 275
  costs associated with treatment, 275, 276
  hospital length of stay, 276
  medicare professional fees for cholecystectomy, 275
  ERCP with stone extraction, 276
Electrohydraulic lithotripsy (EHL) systems, 121, 147, 148, 153, 209
Endoscopic balloon papillary dilation (EBPD), 169, 170
Endoscopic retrograde
  cholangiopancreatography (ERCP), 8, 19, 50, 52, 146, 156, 197, 264
  accessories
    catheters, 206, 208
    guidewires, 204–205
    sphincterotomes, 205, 206
    stents, 207
    stone extraction balloons and baskets, 206, 207
  complications
    bleeding, 211
    infection, 211, 212
    pancreatitis, 210, 211
    perforation, 212
  emergent, indications for, 200, 201
  EUS, 223
gallbladder in situ, 59
gallstone pancreatitis, 55
impacted stones, 152
indications for, 199, 200
lithotripsy for stone fragmentation, 209
in pediatric patients, 209
in pregnant patients, 210
procedure
  contrast, 204
  equipment, 203, 204
  general anesthesia vs. moderate sedation, 202, 203
  room setup, 203
  and PTC, 57
side-viewing duodenoscope, 208
sphincterotomy, 54, 208
training competency assessment, 213 vs. EUS, 218
Endoscopic sphincterotomy, 197–198, 208
cystic and common bile duct, anatomic anomalies of, 201–202
diagnosis, 199
emergent ERCP, 200–201
indications for, 199–200
presentation, 198–199
Endoscopic ultrasound (EUS)
competing diagnostic modalities
biochemical testing, 219, 220
clinical presentation, 218, 219
CT, 222
CTC, 222
ERCP, 223
MRCP, 222, 223
transabdominal ultrasound, 221
therapeutic applications
endoscopic ultrasound-guided drainage
of pancreatic fluid collections, 229
endoscopic ultrasound-guided therapy,
226–229
EUSGBD, 229
failed ERCP, 225, 226
as therapeutic modality, 224
vs. ERCP, 218
Endoscopic ultrasound-guided gallbladder
drainage (EUSGBD), 229
Endoscopic ultrasound-guided therapy,
226–229
Epigastric scanning technique, 88–91, 93, 94
Esophagogastroduodenoscopy (EGD), 129,
142
Estrogen, 32
EUS. See Endoscopic ultrasound (EUS)
Extracorporeal shock wave lithotripsy
(ESWL), 146, 149, 155, 156

G
Gallstone hepatitis (GSH), 36, 38, 39
Gallstone pancreatitis (GSP), 38–40
ERCP, 55
mild/moderate pancreatitis, 53, 54
MRCP, 54
severe pancreatitis, 54
severity of, 52
Gastrogastric anastomosis (GGA), 227
Graduate medical education (GME), 263
GSP. See Gallstone pancreatitis (GSP)

H
Hepaticogastrostomy (HG), 193, 194, 228,
243
Hepatopancreatobiliary (HPB) surgery, 264

I
Impacted stones
cystic duct stone impaction, 150
Dormia basket, 152
EHL and laser lithotripsy, 153
ERCP, 152
ESWL, 155, 156
intrahepatic stones, 154, 155
pneumatic lithotripsy, 151
trans-cystic technique, 152
T-tube tract stone extraction, 155
Interval cholecystectomy, 53, 54, 57, 58, 244
Intrahepatic stones, 154, 155
Intraoperative cholangiogram (IOC), 5, 15, 50,
96–101, 131
air bubbles vs stones, 80
catheters
placement into cystic duct, 78–80
selection of, 75
completion, 76, 77
ductotomy and catheter introduction, 73
equipment for, 73, 74
history, 69
injection, 75, 76
NIRFC, 81
rationale and benefits of routine use, 70–73
visualize duodenum, inability to, 80
visualize proximal bile ducts, inability to,
80
vs. LUS
advantages, 96
anatomy, examination of, 99, 100
CBDS detection of, 97–99
cost, 100, 101
success rate and intraoperative
time, 97
Intraoperative choledochoscopy, 19
clear sphincter area, 23
entrapped stone in the basket, 23
flexible choledochoscopes, 24, 25
hepatic ductal system, 22
Hopkins rod-lens system, 21
miniature (2.8 mm) flexible
choledochoscope, 25–26
sterilizable miniature TV camera, 24
stone impacted in sphincter area, 22
Intraoperative fluoro-cholangiography
cystic duct configuration, 12
extravasation/leakage of contrast, 15–17
larger calculi, 18
Mirizzi syndrome, 19
mobile video amplifier, 8, 9, 11, 12
normal anatomy, 14
small calculi, 18
IOC. See Intraoperative cholangiogram (IOC)

J
Jaundice, 35–36, 61
L
Lacaine-Huguier score, 46
Laparoscopic cholecystectomy (LC), 51, 85–90, 92–94, 96, 106, 124, 125, 140, 177, 178, 227, 264, 274–276
Laparoscopic choledochoscopy, 25
Laparoscopic common bile duct exploration (LCBDE), 105, 125, 264
access route, 124
common duct, access to, 107, 109
cystic/common duct preparation, 111–113
ductal imaging, 110
equipment for, 106, 108
hospitalization, 124
irrigation technique, 122
balloon maneuvers, 114–116
basket maneuvers, 116, 117
cholangiograms, 121
cholecystectomy (see Cholecystectomy)
choledochoscopic techniques, 117, 120
glucagon administration, 114, 115
laser lithotripsy techniques, 120
managing patients with CBDS, 106
morbidity and mortality, 124
operative time, 124
room set up, 106
training in
cognitive and technical steps, 267
HPB surgery, 264
mastery learning, 268–270
and simulation, 265, 266, 268
surgical education, 263
trends of surgical common bile duct exploration, 264, 265
translational science, 271
Laparoscopic transcholedochal common bile duct exploration (LTCD), 127, 131
biliary stent, primary closure with, 139–142
cholangiography, 129, 130
choledochotomy (see Choledochotomy)
indications for, 128, 129
patient positioning and setup, 129
patient selection, 128, 129
postoperative complications, 140
primary closure, 137
T-tubes closure, 138, 139
Laparoscopic ultrasound (LUS), 85
advantages, 96
equipment, 87
indications, 86
technique
epigastric scanning technique, 89–91, 93, 94
initial dissection, 88
intraoperative scanning, 88
umbilical scanning technique, 95
vs. IOC
advantages, 96
anatomy, examination of, 99, 100
CBDS detection of, 97–99
cost, 100, 101
success rate and intraoperative time, 97
Laparoscopic-assisted endoscopic retrograde cholangiopancreatography, 235
indications for, 236
operative considerations
equipment, 238
patient preparation, 238
postoperative care, 242
surgical technique, 239–241
preoperative evaluation, 236–238
Laser lithotripsy techniques, 120, 149, 153
LC. See Laparoscopic cholecystectomy (LC)
LCBDE. See Laparoscopic common bile duct exploration (LCBDE)
LTCD. See Laparoscopic transcholedochal common bile duct exploration (LTCD)
Lumen-apposing metal stents (LAMS), 227
LUS. See Laparoscopic ultrasound (LUS)
M
Magnetic resonance cholangiopancreatography (MRCP), 43, 44, 52, 54–56, 58, 59, 61, 72, 188, 199, 200, 220, 222, 223, 236
Mastery learning (ML), 268–270
Medicare Comprehensive Joint Replacement program, 273
Mirizzi’s syndrome, 19, 160, 201
MRCP. See Magnetic resonance cholangiopancreatography (MRCP)
N
Nasobiliary drains, 163, 164
Near-infrared fluorescent cholangiography (NIRFC), 81
Noninvasive imaging studies
biliary scintigraphy, 45
computed tomography, 41, 43
MRCP, 43, 44
ultrasound, 40, 41
O
Open common bile duct exploration (OCBDE), complications
early postoperative, 184
intraoperative, 184
late postoperative, 185
historical perspective, 177
indications for, 178, 179
technique
  bile duct closure, 182, 183
  choledochotomy, 180
  confirmation, 182
  exploration, 180, 182
  exposure, 179, 180
Operative Biliary Radiology, 10, 12, 15, 19
Preoperative prediction models and accuracy, 46, 47
Primary stones, 187, 188, 198, 217
PTC. See Percutaneous transhepatic cholangiography (PTC)
Rapid weight loss, 33
Retained stone, 4–9, 13, 19, 26, 137–140, 182–184, 200, 244
Roux-en-Y gastric bypass (RYGB), 58, 226, 235, 236
Seldinger technique, 204
Self-expanding metallic stents (SEMS), 166, 167
Simulation-based mastery learning (SBML), 269
Sphincterotomes, 205–207, 249
Stone formation, risk factors for, 32
Stone fragmentation technology
  EHL systems, 147, 148
  ESWL, 149
  evolution of, 145
  instrument fragmentation, 146
  laser lithotripsy, 149
  lithotripsy for, 209
  pneumatic lithotripsy, 146, 147
Supraduodenal common bile duct, 131, 132
Suspected malignancy, 61
Symptomatic common bile duct stones, 39
Transabdominal ultrasound (TUS), 218, 221
Trans-ampullary approaches, 178
Transcholecystic techniques, 248
Trans-cystic removal, 154
Transhepatic cholangioscopy, 248, 249
T-tube cholangiogram, 7
TUS. See Transabdominal ultrasound (TUS)
Umbilical scanning technique, 95
Walled-off pancreatic necrosis, 229, 230
