Sol-gel derived silica coatings, 227
Solid freeform fabrication technique (SFFT), 437–438
Solid-liquid phase separation, 435–436
SonicWeld Rx®, 302
Spinning polymer fibers, 320
Sports medicine, 248
Stainless, 386
Stainless steel (SS), 30, 187, 384
Staphylococcus aureus, 220, 223
Static tension, 128
Index

Stem cells
ASCs, 433
ESCs, 432
MSCs, 432, 433
tissue regeneration and orchestrate tissue remodelling, 432
Stereochemistry, 298
Stereoisomerism, 291
Sterilization, 178
Stochastic resonance, 140, 141
Stratified 3D scaffold design technique, 80
Stratified scaffold design, 78
Stress corrosion cracking, 417
Surface corrosion area, 93, 102
Surface sliding friction, 135
Survivability, 179
Sutures and suture anchors, 327–330
Synthetic biomaterials, 71
Synthetic biopolymers, 441–442
Synthetic materials, 303

T
Tantalum (Ta), 33
Taper design, 92, 100
Taper regions, 98
Tapping, 382
Tendinopathy, 256, 260
Tendons
Achilles tendon, 260
patellar tendon, 256
properties, 256
PRP, 256
tendon healing, 256
Tension
biaxial tension, 133
uniaxial tension, 132
Thermally bonding of particles, 473, 475
Thread of the screw, 382
3D printed dual-pore structure, 61
3D printing route, 59
3D printing techniques, 58, 59
Three dimensional printing, 21, 465, 467–469
ceramic materials, 60
hydroxyapatite and silica particles, 63
metal bone materials, 62
polymer materials, 63
porous materials, 60
raw materials, 58
techniques, 58
Ti-6Al-4V alloy, 48
Tidemark, 70

Tissue engineering (TE), 67
cell functions, 10–11
cell sensitivity, 11
features, 11
principle of, 430 (see also Stem cells)
scaffold construction, 11–12
skin grafts, 8
tissue regeneration, 430
trans-disciplinary approach, 430
2D nanopatterned geometries, 10
nanotechnology, 8–10
Titanium, 384, 387
Titanium alloys, 32
Titanium oxide (TiO₂) nanotubes, 224
TKR components, 93
Torx design, 302
Total hip arthroplasty (THA), 233
Total joint arthroplasty
acetabular liner bearing surface, 177
alumina, 192
bearing surface, 189
catastrophic failures, 193
ceramic implants, 193
ceramic zirconium femoral, 192
MAC, 188
material combinations, 177
metal/ non-metal, 193
polyethylene, 179, 181
sterilization, 178
UHMWPE, 180
zirconia, 192
Total joint arthroplasty factors, 177
PROMs, 176
stability, 177–178
sterilization, 178
surgical procedure, 176
survivability, 179
THA and TKA, 176
Total knee replacements (TKR), 90
Transcription factor NF-κB, 205
Transforming growth factor beta (TGF-β), 362, 387
Tricalcium phosphate (TCP), 305, 348
TWINFIX®, 329

U
Ultra-high molecular weight polyethylene (UHMWPE), 180
Unconfined compression, 130
functional ECM, 131
mechanisms, 131
Uniaxial tension, 132
V
Vancomycin, 225
Vibration
   mechanical vibrations, 136
   ultrasound, 136
Vibration stimulation, 136
Vitallium, 384
Vitamin E, 181, 182

W
Wear particles, 200, 204, 205, 211
Wear simulation testing
   achievement, 117–118
   and comparison, 119
   joint simulator, 111, 112
   limitation, 118–119
   standardization, 116
   total joint replacements, 111
Wilcoxon test, 100

Wolff’s law, 38
Working electrode (WE), 153
Woven bone, 388
Wrought iron, 384

X
X-ray photoelectron spectroscopy (XPS), 157

Y
Young’s modulus, 387, 476

Z
Zero resistance ammeter (ZRA), 154
Zinc (Zn), 366
Zirconia, 192, 367
Zirconium, 188, 189
Zone of inhibition (ZOI) studies, 234
