**A**
- AO classification, 9
- Arthritic wrist, arthrodesis
  - background, 211–212
  - surgical approach overview, 212–213
  - surgical technique
    - capitale-lunate, 214, 217–222
    - carpal arthrofibrosis, 214
    - diagnosis of pathology, 213–216
    - percutaneous bone graft, 222–223
- Arthroscopic arthrodesis. See Arthritic wrist, arthrodesis
- Arthroscopic-assisted osteotomy
  - cartilage fracture lines, 191, 192
  - discussion, 207–208
  - indications and contraindications
    - free osteochondral fragment, 195
    - massive bone loss, 196
    - perfect restoration, 194
    - radius step-off, 196
    - scaphoid fossa, 195
  - instruments, 198–200
  - logistics, 198
  - operation
    - intraoperative view, 203
    - scaphoid fossa, 204
    - volar-radial approach, 201
  - preoperative planning, 196–197
  - results, 204–207
- Arthroscopic-assisted reduction, 13, 36–38, 41
- Arthroscopic-assisted reduction and internal fixation (AARIF), 41
- Arthroscopic radiocarpal fusion
  - complication and results, 235–241
  - partial wrist fusion, 226
  - radiolunate fusion
    - Foley catheter, 232, 236
    - post-distal radius fracture, 235
  - radioscapulohumate fusion
    - Foley catheter blocking technique, 231
    - intra-operative fluoroscopy, 228, 229
    - K-wires, 232–235
    - shell of cartilage, 228
    - set up and instrumentation, 226–227
- Arthroscopic role
  - Borelli traction tower, 154
  - clinical experience, 164–165
  - discussion, 166, 168–171
  - distal radioulnar joint, 162–164
  - evaluation, 159
  - extraarticular and intraarticular wrist fractures, 152
  - failures and complications, 171–172
  - flexion-extension, 162
  - instruments, 153
  - limitation, 151
  - midcarpal joint, 162
  - postop treatment, 165
  - radiocarpal joint
    - ancillary procedures, 161–162
    - fibrosis and fibrotic band resection, 154–159
    - volar and dorsal capsule resection, 158–161
    - radiocarpal portals, 152
    - results, 165–168
    - Whipple traction tower, 152, 154
- Arthroscopic wafer resection, 176, 178
- Arthroscopic wrist arthrolysis (AWA), 164–166
- Avulsion fracture, sigmoid notch
  - arthroscopic repair, 93–96
  - open repair, 93–94, 97

**B**
- Ballottement test, 76–79
- Borelli traction tower, 154
- Buttressing plates, 58, 63, 200
- Buttressing principle, 58–63

**C**
- Carpal arthrofibrosis, 214
- Carpal intersosseous ligament tears, 105
- Carpal tunnel, 2, 61–63, 69, 94
- Class 3-A lesion, 85
- Concomitant scaphoid fractures
  - fracture compression, 124
  - indications, 117–118
  - intraarticular screw exposure, 125
  - percutaneous screw fixation, 117, 124
  - surgical armentarium, 125
- technique
  - arthroscopic radiocarpal control, 118–119
  - cannulated Herbert double-threaded screw, 120, 122
  - compressive effect, 121
  - Finochietto interdigital traction device, 118
  - fracture fixation and localization, 119–120
  - K-wire retraction, 119
open reduction and internal fixation, 118–119
operative aspects, 123
perioperative complications, 124
reduction quality, 121, 123
risk factors, 124
tapping, scaphoid poles, 120, 122
volar percutaneous technique, 124

D
Direct foveal (DF) portal repair, 80–81
Distal hammock-like structure, 89, 90, 185
Distal radioulnar joint (DRUJ)
arthroscopic role, 162–164
hypermobility, 76
laxity, 76, 78
TFC traumatic tears, 183, 186
ulnar styloid impaction, 181–183
Distal radioulnar joint (DRUJ) instability
classification system, 74–75
clinical assessment and arthroscopic findings
ballottement test, 76
hook test, 77–78
intraoperative parameters, 78
“soft” end-point resistance, 76, 78
TFCC laceration, 76–77
trampoline test, 77
type I-B injury, 77
clinical implications, 74
DRF pathomechanics, 73–74
Galeazzi fracture-subluxation, 75
hyperextension injury, 73
indications, 78–80
ligamentum subcruentum, 73
long arm cast immobilization, 73
postoperative care, 85–87
risk factors, 76
technique
direct foveal portal, 80–81
styloid fixation, 85
surgical treatment and diagnostic arthroscopy, 80
suture anchor foveal repair, 81–84
ulnar styloid fracture, 74–75
Doi classification, 29
Dorsal capsule resection. See Volar and dorsal capsule resection

Dorsal extrinsic ligament injury
Slutsky’s procedure, 113–114
thermal shrinkage, 115
Dorsal extrinsic ligaments, 127, 131
Dorsal radiocarpal (DRC), 128
Dorsal radiocarpal ligament (DRCL), 17–20, 113–115
Dry technique
arthrosponge, 44
aspiration procedure, 42
moist arthroscopy, 43
soft tissue extravasation, 42

E
European Wrist Arthroscopy Society (EWAS), 105
Explosion-type distal radius fractures
arthroscopic part
fragment displacement, 48–50
stabilizing fractures, 48
unreduced fragments, 51, 53–56
carpal tunnel, 61–63
classic part
flexor carpi radialis sheath, 45
volar locking plate, 45
clinical experience, 63–64
dry technique
arthrosponge, 44
aspiration procedure, 42
moist arthroscopy, 43
soft tissue extravasation, 42
osteochondral fragments, 63
figure-of-eight wire suture, 61
short radio-lunate ligament, 64
postoperative care, 53, 56
scaphoid fossa comminution
buttressing principle, 58, 63
external fixator and K-wires, 61
styloid fractures, 57, 60
severe metaphyseal comminution
extra-articular reduction, 57
volar radiocarpal dislocation, 55
volar-ulnar fragment, 55–59

F
Fernandez classification, 10
Fibrocartilage-radius interface tear, 93
Fibrosis resection, 154–159
Fibrotic band resection, 154–159
Finochietto interdigital traction device, 118
Floating styloid, 79, 85, 183, 184
Foley catheter blocking technique, 231
Fracture dislocations
arthroscopic management, 142, 144–147
carpal
antegrade screw, 136
greater arc injury, 134, 136
Kleinert elevator, 137
circumferential access, 129, 130
combined injuries
disruption pathway, 143, 144
scaphoid volar dislocation, 141
discussion, 146, 148
extrinsic ligament midsubstance disruption, 133–135
final evaluation, 130
indications
magnetic resonance imaging, 129
physical examination, 128
intrinsic ligament ruptures, 137–141
marginal fragments
Kleinert elevator, 132
lunate facet, 133
lunate fossa, 131
multiple planes, 132
radioscaphocapitate, 131, 132
scaphoid fossa, 132
volar rim, 131
rehabilitation, 144–145
small bone manipulation, 130
Free osteochondral fragments (FOFs), 48, 50, 53, 64
Frykman classification, 10

G
Geissler’s classification, 104–105
Greater arch perilunate dislocation, 99–100

H
Hook test, 25, 79, 83, 84, 181–184, 186
DRUJ laxity, 78
partial detachment, foveal insertion, 181, 182
TFCC foveal avulsion, 77–78
TFCC peripheral tear, 80
ulnar styloid, 183, 184
Hyaloglide®, 158, 165, 166, 170

I
Intraarticular distal radial fractures classification, 28–30
Intraarticular fibrosis, 154, 155
Intraarticular malunion
discussion, 207–208
fracture dislocation, 188
indications and contraindications
free osteochondral fragment, 195
massive bone loss, 196
perfect restoration, 194
radius step-off, 196
scaphoid fossa, 195
macroscopic defects, 151
preoperative planning, 196–197
results, 204–207
surgical technique
instruments, 198–200
logistics, 198
operation, 199–204
Intraoperative fluoroscopy, 22, 228, 229
Irrigation-suction cycle, 43

L
Ligamentum subcruentum, 73
Long radiolunate (LRL), 15, 113, 128, 130, 142, 202
Lunate fossa (LF), 131
Lunotriquetral and extrinsic ligaments lesions
incidence, 109–110
Inotriquetral intersosseous ligament
(LTIO) management
arthroscopic debridement, 109
chronic ulnar side pain, 111
electrothermal shrinkage, 110
Geissler classification system, 109
joy stick maneuver, 111
lunotriquetral arthrodesis, 112
management
dorsal extrinsic ligament injury, 113–115
volar extrinsic ligament injury, 112–113
Lunotriquetral intersosseous (LTL)
carpal fracture, 135
indications, 129
interface, 138, 139
marginal avulsion, 137

M
Magnetic resonance imaging (MRI)
and arthroscopy, 9
CT and, 103
diagnosis of pathology, 213
fracture dislocations, 129
hypertrophic styloid nonunion, 184
intraarticular step-off, 188
Midcarpal joint, 13, 15, 16, 19, 20, 48, 123, 137, 152, 162, 168.
See also Arthritic wrist, arthrodesis
Moist arthroscopy, 43
Müller AO classification, 27, 29

O
Open plate fixation (ORIF), 13
Open radius surgery, 142, 144–147
Osteochondral fragment, 41, 48, 63, 195
Osteotomy
discussion, 207–208
free osteochondral fragment, 195
instruments, 198–200
logistics, 198
massive bone loss, 196
operation, 199–204
perfect restoration, 194
preoperative planning, 196–197
radius step-off, 196
results, 204–207
scaphoid fossa, 195
ulnar carpal impaction, 176

P
Percutaneous screw fixation, 117, 124–125
Perilunate dislocations
arthroscopic management, 142, 144–147
carpal fractures
antegrade screw, 136
greater arc injury, 134, 136
Kleinert elevator, 137
discussion, 146, 148
lunotriquetral intersosseous
interface, 138, 139
marginal avulsion, 137
rehabilitation, 145
scapholunate intersosseous
interface, 138
pin fixation, 140
scaphoid fracture, 137
Portals, wrist arthroscopy
anatomy, 13–14
arthroscopic-assisted fixation, 21
diagnostic survey
3-/4 and 4-/5 portals, 19
DRUJ portals, 20–21
midcarpal portals, 19–20
6R, 6U Portals, 19
volar portals, 20
dorsal and volar DRUJ, 18
dorsal portals
midcarpal, 15
radiocarpal, 14–15
Triquetro-Hamate and radioulnar, 15
equipment and implants
four-part fractures, 24–25
radial styloid fractures and surgical technique, 22
requirements, 21–22
TFC repair kit and ligament repairs, 22
three-part fractures, 22–24
ulnar styloid fractures, 25
ulnar and radial midcarpal portal, 18
volar portals
radial, 15–16
ulnar, 16–17
volar distal radioulnar (VDRU), 17
volar radial midcarpal (VRM), 16
Posterior ulnar (PU) fragment, 51, 95
Postfracture stiffness, arthroscopy
arthroscopic wrist arthrolysis, 164–166
discussion, 166, 168–171
distal radioulnar joint, 162–164
failures and complications, 171–172
postop treatment, 165
radiocarpal joint
ancillary procedures, 161–162
fibrosis and fibrotic band resection, 154–159
volar and dorsal capsule resection, 158–161
Postop treatment, 165
Post-traumatic radiocarpal arthrosis
indications and contra-indications, 226
results and complication, 235–241
surgical approach
radiolunate fusion, 232, 235–237
radioscapholunate fusion, 227–235
set up and instrumentation, 226–227
Pre-operative assessment
classification, 9–10
examination, 2
investigations
CT imaging, 7–9
fracture characteristics, 3–6
fracture stability, 6–7
MRI and arthroscopy, 9
parameters, 2–3
X-ray, 2
patient history, 1–2
Preoperative planning
intraarticular malunion, 196–197
simple articular fractures, 30
Pull-out wiring method, 94, 97
R
Radial midcarpal portal, 13, 18, 118, 119, 124
Radial tear, TFCC
anatomy, 89–90
classification, 90–91
diagnosis and evaluation, 91–93

arthroscopic partial resection, 93
avulsion fracture, dorsal sigmoid notch, 93–94
combination injury, 94
fibrocartilage-radius interface tear, 93
palmar sigmoid notch, avulsion fracture, 94
postoperative care, 97
total radial avulsion, 94, 98
Radiocarpal dislocations
arthroscopic management, 142, 144–147
discussion, 146, 148
indications, 128
marginal avulsion, 133
marginal fragments
Kleinert elevator, 132
lunate facet, 133
lunate fossa, 131
multiple planes, 132
radioscaphocapitate, 131, 132
scaphoid fossa, 132
volar rim, 131
Radiocarpal joint, arthroscopic role
ancillary procedures, 161–162
fibrosis and fibrotic band resection, 154–159
volar and dorsal capsule resection, 158–161
Radiocarpal (RC) portals, 152
Radiolunate (RL) fusion
Foley catheter, 232, 236
post-distal radius fracture, 235
Radioscaphocapitate (RSC)
free margins, 134
reduction and stabilization, 132
Radioscapholunate (RSL) fusion
Foley catheter blocking technique, 231
intra-operative fluoroscopy, 228, 229
K wires, 232–235
shell of cartilage, 228
Range of motion (ROM)
evaluation, 159
flexion-extension, 162
limitation, 151
Rehabilitation
fracture dislocations, 144–145
postop treatment, 165
S
Scaphoid fossa (SF), 132
Scaphoid fossa comminution
buttressing principle, 58, 63
external fixator and K-wires, 61
styloid fractures, 57, 60
Scaphoid fractures, classification, 125
Scapholunate dissociation
anatomy and biomechanics, 100–102
arthroscopic indications, 103
Geissler grading, 104–105
management
acute injuries, 105–106
late presentation, 106–107
non-osteoporotic patients, 99–100
pathology
arthroscopy and radiographs, 103
clinical assessment, 102
CT and MRI imaging, 103
radiocarpal visualization and mid-carpal arthroscopy, 104
SL ligament injury detection, 99
Scapholunate instability, 71, 99, 102, 103
Scapholunate interosseous (SLIL)
carpal fracture, 135
indications, 129
interface, 138
pin fixation, 140
scaphoid fracture, 137
Scapholunate ligament tears, 9
Scapho-trapezial ligamentous complex, 101–102
Scaphotrapeziotrapezoid (STT), 18, 19, 121, 125, 162, 212, 213, 228
Severe metaphyseal comminution, 54–55
Sharpey’s fibers, 90
Short radio-lunate ligament (SRL), 17, 64, 128, 130, 131, 139
Simple articular fractures
advantages, arthroscopic technique, 27
associated injuries, 37, 38
classification
AO type C3 fractures, 28, 30
Müller AO classification, 27, 29
clinical experience and personal results, 38
complications, 37
four-part fractures, 36–37
indications and contraindications, 30
surgical technique, 30–31
three-part fractures
arthroscopic fine-tuning, 36, 37
depressed lunate facet fragments, 34, 36
open standard volar technique, 35–36
treatment effects and outcomes, 38
two-part fractures
joystick technique, 34, 35
Kirschner wire and cannulated screw, 31–32
volar fragment, 32–33
SMC flip knot, 82, 83
Styloid fixation, 85
Suture anchor foveal repair, 81–85
Suture welding technique, 70

T
TFCC. See Triangular fibrocartilage complex
TFCC ulnar tears. See Distal radioulnar joint (DRUJ) instability
Trampoline test, 77, 78, 80
Trans-styloid perilunate injury, 103, 107
Traumatic tears, 183, 185–187
Triangular fibrocartilage (TFC)
traumatic tears
distal radioulnar joint, 183, 186
triangular fibrocartilaginous complex, 185, 187
ulnar carpal impaction, 176–178
arthroscopic role, 162–164
perforation, 227
traumatic tears, 183, 185–187
ulnar styloid impaction, 179, 181–183
Triangular fibrocartilage complex lesions
contraindications
debridement, central tears, 68
peripheral lesions, 68–69
unstable DRUJ, 68
indications, 67–68
management, 69–71
intraoperative sugar-tong plaster splint, 70
perforation and suture passing, 69–70
pronation/supination restriction, 71
small and large central tears, 69
suture welding technique, 70
repair zone, 67
surgical technique, 69
Triquetro-Hamate (TH) portal, 15

U
Ulnar carpal impaction (UCI)
arthroscopic wafer resection, 176, 178
clinical signs, 177
radius osteotomy, 176
TFC reattachment, 178
triangular fibrocartilage, 176
Ulnar styloid impaction (USI)
diagnosis, 179
distal radioulnar joint, 181, 182
floating styloid, 183, 184
partial detachment, foveal insertion, 181, 182
pathologic conditions, 179
Ulnocapitate (UC), 128, 130
Ulnolunate (UL), 128, 134
Ulnnotriquetral (UT), 128, 134

V
Volar and dorsal capsule resection, 158–161
Volar Barton fractures, 58
Volar extrinsic ligament injury, 112–113
Volar extrinsic ligaments, 127, 131, 133–135
Volar rim (VR), 131
Volar-ulnar fragment, 50, 55, 59, 197, 199–200

W
Whipple traction tower, 152, 154
Wrist arthroscopy, 13, 25. See also Portals, wrist arthroscopy
