Index

A
Absorption of emitted photons, 85
Acceleration field, 6
Analyzing power, 123
Angular distribution of BS, 45

B
Backward Compton scattering, 181
Backward transition radiation, 77
Basis vectors, 25
Bethe–Heitler spectrum, 69
Bragg angle, 107
Bragg direction, 108
Brightness, 7
Brilliance, 7
Bunch length, 202

C
Channeling, 60
Circular polarization, 37
Coherent bremsstrahlung, 2
Coherent radiation, 2
Coherent bremsstrahlung
of B-type, 62
Compton polarimeter, 123
Compton scattering, 2
Cross-section of BS, 38
Crystal lattice potential, 51

D
Debye temperature, 53
Debye–Waller factor, 54
Deflection parameter
(Undulator parameter), 18
Degree of polarization, 9
Diffracted transition radiation, 128
Diffraction factor, 51
Diffraction of real photons, 109
Diffraction of virtual photons, 121
Diffraction orders, 88
Diffraction radiation, 135
Dipole approximation, 22
Dispersion relation for PXR, 109
Doppler effect, 180
Dynamic polarization, 135

E
Edge of photoabsorption, 118
Effect of density in BS, 48
Effective mass of electron, 195
Energy losses in transition radiation, 83
Energy of plazmon, 47

F
Field strength, 7
Formation length, 10
Forward transition radiation, 77
Forward transition radiation spectrum, 82
Free-electron laser, 188
Fresnel reflection coefficient, 106
Full screening, 49
Full width at half maximum, 112

G
Ginzburg–Frank formula, 76

211
Index

H
Head-on-collision, 181
Helical magnetic undulator, 18
Helmholtz equation, 141
Huygens–Kirchhoff theorem, 138
Hertz vector, 74
Huygens’ principle, 136

I
Impact parameter, 140
Intense laser wave, 165
Interference factor, 14

K
Kinematic theory of PXR, 107

L
Laser–synchrotron X-ray source, 200
Layered crystalline target, 126
Layered target, 84
Lindhard’s angle, 68
Linear coefficient of absorption, 89
Linear Compton effect, 180
Linear polarization, 9
Linear polarization of BS, 40
Lorentz-factor, 1
Luminosity, 201

M
Map of crystallographic planes, 65
Medium dielectric permittivity, 78
Miller indices, 52
Minimal recoil momentum, 49
Model of Kazantsev-Surdutovich, 150
Model of surface current, 144
Mosaicity of a crystal, 120
Multiple scattering angle, 47

N
Nonlinear Compton scattering, 195
Nonlinear equation of a resonance, 87
Nonlinear Thomson scattering, 189
Non-perturbative diagnostics, 207

O
Optical resonator, 188, 200
Orientation of a crystal, 52

P
Parametric X-ray radiation (PXR), 105
Partial cross-section, 174
Periodic heterogeneous target, 98
Phase diagram for layered targets, 89
Photon beams, 63
Plane undulator, 17
Plane wiggler, 31
Plasmon frequency, 78
Point effect, 59
Polarimeter, 100
Polarization bremsstrahlung, 2
Polarization characteristics of PXR, 126
Polarization characteristics of TR, 78
Polarization of medium, 47
Polarized positrons, 208
Poynting’s vector, 6
PXR line, 109
PXR line width, 116

R
Radiation factor, 143
Radiation flux, 7
Radiation length, 46
Radiation losses, 46
Radiation losses in undulator, 24
Reciprocal crystal lattice, 51
Recoil momentum, 11
Reflectivity, 121
Resonance condition, 1
Resonant diffraction radiation, 135
Resonant transition radiation, 2
Root-mean-square amplitude, 51

S
Scalar theory of the diffraction, 138
Schott formula, 33
Screening effect, 39
Smith–Purcell radiation, 2
Spectral brightness, 6
Spectral flux, 7
Spectrum of scattered photons, 182
Spherical wave, 74
Storage ring, 200
Stokes parameters, 8
Structure factor, 52
Suppression of BS yield, 48
Index

T
Thomson cross-section, 167
Thomson formula, 174
Transition radiation, 73
Transmission coefficient, 143

U
Uberall’s “pancake”, 55
Undulator radiation, 1, 22
Undulator radiation polarization, 27

V
Van den Berg’s approach, 140
Velocity field, 5
Velocity of drift, 168
Virtual photon, 105

W
Wave packet, 171
Wave zone, 6
Width of a spectral line, 90
