Index

A
Asynclitism
- caput succedaneum and molding, 82, 84–85
- fetal head engagement
  - fetal sagittal suture palpation, 73, 74
  - posterior and anterior fontanel palpation, 73–74
- fetal head position
  - anterior asynclitism, 76–77
  - anterior occipital positions, 75, 76
  - left occiput anterior position, 78–79
  - occiput transverse position with posterior asynclitism, 78
  - transabdominal longitudinal section, 77
- vaginal digital examination, 75, 76
- left occiput anterior position, 75
- occiput posterior position
  - direct OP position, 79
  - left occiput position, 79–80
  - right occiput position, 80, 81
  - squint sign, 80, 81
- occiput transverse position
  - anterior asynclitism, 80
  - cephal head tumor palpation, 82
  - deep transverse head position, 81, 83
  - left OT position with anterior asynclitism, 82–84
  - posterior asynclitism, 81
  - ROT and LOT, 80
- parietal bone, 75
- incidence, 133–136
- neurotransmitter alteration, 140, 142
- primates, 134
- risk factors, 134
- in USA, 134
- forceps and obstetric vacuum, 135, 137–138
- intrapartum sonography
  - bladder flap hematoma, 142, 143
  - fetal median occiput-posterior position, 139, 140
  - intraoperative bleeding complications, 139
  - postoperative complications, 139, 141
  - subfascial hematoma, 142, 143
  - perineum damages, 135
- Caput succedaneum, 82, 84–85, 113
- Central Processing Unit (CPU TM), 152
- Cervical length. See Transvaginal ultrasound cervical length (TVU CL)
- Cervical simulator model, 1
- Cervicometers, 151
- Clinical evaluation
  - cervical dilatation, 1–2
  - fetal head position
    - second stage of labor, 7–8
    - transabdominal sonography (see Fetal head position)
    - transvaginal digital examination, 4, 7
  - fetal head station
    - computed tomography, 2
    - digital examination, 2, 3
    - transperineal ultrasound, 2–4

B
Barnev device
- components, 153
- dilatation and descent, 154, 155
- output, 153–154
- Birmont cervicometer, 152–153
- Bladder flap hematoma, 142, 143

C
Caesarean sections
- dystocia
  - defensive medicine, 134
  - European data, 134–135
  - factors causing, 133
  - human species, 133–134

2D ultrasound (cont.)

- vs. digital examination, 29–30
- fetal occipital position and indices, 34
- head engagement, 31–32
- midline intracranial structures, 30
- translabial and transperineal ultrasound, 32, 34, 35
- transvaginal ultrasound, 34, 35
- uterine cervix sonoelastography, 34, 36

3D ultrasound

- head rotation
digital examination, 107
- midline angle measurement, 105–107
- multiplanar reconstruction, 105, 107
- reproducibility, 105
- vs. traditional 2D US, 106
- translabial ultrasound, 36–39

Dystocia

defensive medicine, 134
European data, 134–135
factors causing, 133
human species, 133–134
incidence, 133–136
neurotransmitter alteration, 140, 142
primates, 134
risk factors, 134
in USA, 134

E

Elastography index (EI), 34

F

Fetal head descent. See also Fetal head station

- labor progression
angle of progression, 49, 51
continuous ultrasound monitoring, 51
fetal head direction, 49, 51
head–perineum distance, 51–52
ischial spine, 46
midline, 46, 51
progression distance, 49, 51
sacral tip, 46
transabdominal approach, 49
transperineal or translabial approaches, 49
pelvic axis, 87–88
transperineal ultrasound
angle of progression, 97–99
fetal head-perineum distance, 89
linear measurements, 88
prediction intervals, 91–92
pubic symphysis, 88–89
ultrasound probe position, 88

Fetal head station. See also Fetal head descent

- labor progression
angle measurements
during maternal pushing, 172–173
occipito posterior position, 172, 173
probe orientation, 170, 171
reproducibility and reliability, 173–175
second stage labors, 170
transperineal ultrasound, 170, 172

Fetal head position. See also Occiput

- posterior (OP) position
asynclitism
anterior asynclitism, 76–77
anterior occipital positions, 75, 76
left occiput anterior position, 78–79
occiput transverse position with posterior asynclitism, 78
transabdominal longitudinal section, 77
vaginal digital examination, 75, 76
errors in, 164
internal rotation, 163–164
occiput posterior position, 163, 164
transabdominal sonography
cesarean section
  complications, 163
  increases in, 162
  ultrasound-derived estimated fetal weight, 163
  vaginal birth after, 163
fetal head position assessment
  errors in, 164
  internal rotation, 163–164
  occiput posterior position, 163, 164
fetal head rotation, 169
fetal head station (see Fetal head station)
intrapartal ultrasound, 173
magnetic resonance imaging, 175–177
vaginal operative delivery, 161–162
First stage of labor
  2D ultrasound (see 2D ultrasound)
  3D Ultrasound, 36–39
Friedman’s labor partogram, 29, 30

H
Head–perineum distance, 51–52
Head rotation
  3D ultrasound
digital examination, 107
midline angle measurement, 105–107
multiplanar reconstruction, 105, 107
reproducibility, 105
vs. traditional 2D US, 106
  2D ultrasound, OP position
cephalic malposition, 103
digital assessment, 103–104
fetal spine orientation, 104
longitudinal assessment, 104
physiologic vertex delivery, 103
suprapubic OP position, 104
dynamic changes, 101
midpelvis plane, internal rotation, 101, 102
translabial approach, 104–107

I
Intrapubic line, 112
Intrapartum translabial ultrasound (ITU)
  vs. abdominal ultrasound, 109, 111
clinical usefulness
  angle of descent, 113, 114
  internal rotation, 113–115
  vaginal births and delivery time, 113–115
dynamic aspect, 110, 112
before instrumental vaginal delivery, 116
palpated head stations, 113, 114
perineal insonation, 109
pubic symphysis and ischial spinae, 110
quantitative parameters
  angle of descent, 111–112
  caput succedaneum, 113
  head direction, 112–113
  infrapubic line, 110
  ischial spines, 111

Intrapartum ultrasound
  asynclitism (see Asynclitism)
breach presentation, 25, 26
classification, 18
Doppler studies, 25
exploration techniques
  abdominal exploration, 16
  bladder-emptying, 16
  exploration type determination, 17–18
  medial sagittal plane, 16, 17
  translabial or transperineal exploration, 16
fetal head descent (see Fetal head descent)
fetal head position determination (see also Fetal head position)
digital determination, 18
3D transperineal ultrasound, 20
sutures and fontanels, 20, 21
transabdominal ultrasound, 18, 19
vacuum extraction, 19–20
vaginal touch, 18
head rotation (see Head rotation)
indications, 18
labor progression (see Labor progression)
obstetricians, 15–16
portable ultrasound, 15
recommended ultrasound settings, 17
stalled labor (see Stalled labor)
transabdominal ultrasound (see Transabdominal ultrasound)
translabial ultrasound (see Translabial ultrasound)
transperineal ultrasound (see Transperineal ultrasound)
ultrasound probes, 15
Ischial spines, 111

L
Labor progression. See also Fetal progression in birth canal
Barnev device
  components, 153
dilatation and descent, 154, 155
output, 153–154
Birmont cervicometer, 152–153
cardinal movements, 45, 46
digital assessment
cervical dilatation, 43
fetal station, 45
digital vaginal examinations, 150
dystocia, 42–43
fetal station assessment
  angle of progression, 49, 51
  continuous ultrasound monitoring, 51
  fetal head direction, 49, 51
  head–perineum distance, 51–52
  ischial spine, 46
  midline, 46, 51
  progression distance, 49, 51
  sacral tip, 46
  transabdominal approach, 49
transperineal or translabial approaches, 49
Labor progression. See also Fetal progression in birth canal (cont.)
ischial spine palpation, 43, 44
previous cervicometers, 151
protracted labor, 43
stages of labor, 41
transvaginal ultrasound, 149

TRIG system
cervical dilatation and pelvic diameters, 157
components, 155
3-D graphical display, 155, 156
fetal head position, station, and descent, 155–156
safety, 156
ultrasound assessment
digital assessment, 55
2D or 3D ultrasound, 55–56
fetal head engagement, 52–53
first stage of labor, 53–54
method of choice, 55
pelvic floor imaging, 57–58
routine use, 56
second stage of labor, 54–55
single scan or serial scans, 55
uterine EMG monitor, 151

LaborPro system. See Trig Medical’s LaborPro system

O
Occiput posterior (OP) position
asynclitism
direct OP position, 79
left occiput position, 79–80
right occiput position, 80, 81
squin sign, 80, 81
digital examination, 61
digital exploration, 102–103
2D ultrasound
cephalic malposition, 103
digital assessment, 103–104
fetal spine orientation, 104
longitudinal assessment, 104
physiologic vertex delivery, 103
suprapubic, 104
epidural analgesia, 71
etiology of, 64–67
induction of labor, 70
maternal and fetal landmark identification, 63, 64
maternal and neonatal outcomes, 66
normal spontaneous vaginal delivery
anterior rotation, 68, 70
fetal spine and head position, 70
LOP and ROP position, 68
manual rotation, 70
transabdominal ultrasound, 70
prevalence of, 61
transabdominal ultrasound examination
longitudinal section, 61, 62
transverse view, 61–63
transvaginal approach, 63, 64
vaginal digital examination
vs. transabdominal ultrasound, 67–68
vs. transperineal ultrasound, 68
vs. transvaginal ultrasound, 68
vaginal examination, 61, 62
vaginal operative delivery, 70
Occiput transverse (OT) position
anterior asynclitism, 80
cephal head tumor palpation, 82
deep transverse head position, 81, 83
left OT position with anterior asynclitism, 82–84
posterior asynclitism, 81
ROT and LOT, 80

P
Portable ultrasound, 15
Preterm labor (PTL)
FFN, 123, 124
preterm birth
definition, 119
digital cervical examination, 119
physical examination, 119
risk factors, 119
TVU CL
advantages, 119–120
algorithm, 123, 124
induction of labor, 125, 126
PPROM, 123–125
prostaglandin induction agent, 128–129
PTL symptoms prediction, 120–123
recommendations, 120
spontaneous onset of labor, 125, 127–128
Preterm premature rupture of membranes (PPROM),
119, 123–125
Prostaglandin induction agent, 128–129

S
Scalp edema, 113
SonoVCAD TM Labor software, 24, 26
Stalled labor
cephalic rotation, 24
fetal head position, 20, 24
fetal head station, 20
progression of labor
angle of progression, 20, 22
head direction, 22, 23
progression distance, 22–24
SonoVCAD TM Labor software, 24
Subfascial hematoma, 142, 143

T
Thrombophilia
intrapartum ultrasonography
deep venous thrombosis, 144
femoral vein thrombosis, 143, 144
inherited, 144–145
LMWH dosage, 145
pulmonary embolism, 143
risk factors, pregnancy, 144
pharmacological treatment, 145–146

Transabdominal ultrasound
2D ultrasound
anterior occiput position, 32
axial and longitudinal, 31
vs. digital examination, 29–30
fetal occipital position and indices, 34
head engagement, 31–32
midline intracranial structures, 30
fetal head position
anterior occiput position, 4, 5
asynclitism, 77
left posterior occiput position with anterior
left asynclitism, 10
left transverse occiput position with posterior
asynclitism, 9
median posterior occiput position with left
asynclitism, 11
posterior occiput position, 12
right anterior occiput position with posterior
right asynclitism, 11
right posterior occiput position with posterior
asynclitism, 12
right transverse occiput position with anterior
asynclitism, 10
transabdominal ultrasound, 18, 19
transverse occiput position, 4, 6
occuput posterior (OP) position
longitudinal section, 61, 62
normal spontaneous vaginal delivery, 70
transverse view, 61–63
vs. vaginal digital examination, 67–68

Translabial ultrasound. See also Intrapartum translabial ultrasound (ITU)
3D acquisition, 36–39
progression angle measurement, 67
three-dimensional, 2

Transperineal ultrasound
angle of progression, fetal head descent
arc-like pathway, 89
delivery time, 92–94
intraobserver variability, 90–91
population, 89
pubic symphysis, 90–92
pubic symphysis and ischial spines, 96–97
sagittal view, 90, 92, 93
suboccipitobregmatic diameter, 89
validation, 94–96
2D ultrasound, 32, 34, 35
fetal head station, 2–4
angle of progression, 97–99
fetal head-perineum distance, 89
linear measurements, 88
prediction intervals, 91–92
pubic symphysis, 88–89
ultrasound probe position, 88
maternal and fetal landmark identification, 63, 64

Transvaginal ultrasound cervical length (TVU CL)
advantages, 119–120
algorithm, 123, 124
induction of labor, 125, 126
PPROM, 123–125
prostaglandin induction agent, 128–129
PTL symptoms prediction, 120–123
recommendations, 120
spontaneous onset of labor, 125, 127–128

Trig Medical’s LaborPro system
cervical dilatation and pelvic diameters, 157
components, 155
3-D graphical display, 155, 156
fetal head position, station, and descent, 155–156
safety, 156

U
Ultrasound probes, 15

V
Vaginal birth after cesarean section (VBAC), 163
I express my personal thanks to Antonio Dell’Aquila, young great drawer, designer and artist, able to illustrate many chapters with some beautiful and detailed pictures. I hope his future can be rewarding and can contribute to the illustration of many other books and publications with the precision and detail of which he is capable.
