A_1-optimality, 219
A-optimality, 121, 199
accurate interpolator, 125
adaptive design, 47, 69, 91, 165, 166, 229
adjusted p value, 160
analysis of data, 15, 111
ANOVA, 49, 158, 198
approximate design, 61
approximation to integral, 206
Arrhenius model (modified), 173
asymptotic properties, 166
automatic defect detection, 194

barycentric interpolation, 122
Bayesian
approach, 99
design, 118
estimation, 149, 166
viewpoint, 173, 223
beta distribution, 126
beta regression, 60
biased coin design, 22
binary response, 41
bivariate model, 182
bivariate probit, 65
black ball, 84
Bonferroni, 160
bootstrap, 53
Bradley-Terry model, 217
breakdown point, 138
centre point, 105
Chebyshev polynomials, 121
chemical kinetics, 173
clinical trial, 17, 41, 198
multicentre, 2
combination drug therapy, 157

compositional data, 57
compound design, 20
computational cost, 95
computer experiments, 89, 121, 149, 189, 221
concomitant variable, 17
conditioning argument, 41
confounded effect, 105
consecutive first-order reactions, 61
consistency, 69, 166, 222
cost, 29
cost-based normalization, 76, 167
covariance
function, 222
kernel, 145
structure, 174
cubic model, 12
D_1-optimality, 11
D_A (D_L ) optimality, 18
D_L (D_A ) optimality, 219
D_8-optimality, 9, 121, 206
D-efficiency, 106, 114
d-fullness, 138
D-optimality, 108, 121, 165, 199
analytical peculiarity, 179
Bayesian, 118
 correlated errors, 174
exact, 101
local, 59, 68, 76, 101, 114, 166, 174, 183, 205
design construction, 210
design measure, 114
  non-standard interpretation, 145
desirability function, 26
deterministic model, 153, 193
deterministic strategy, 91
Dirichlet
distribution, 63
  model, 59
discrimination between models, 9, 206
dose finding, 181
dose-response model, 114, 157, 186
dropout, 6
drug development, 67, 157
drug interaction, 198

E-optimality, 121
efficacy, 66
EOHSA, 158
equidistant design, 176
equivalence theorem, 14, 115, 208
ethics, 67, 82, 85, 114
exchange algorithm, 69
expected improvement algorithm, 89, 222
expensive, 221
factorial design, 30, 158
Farlie-Gumbel-Morgenstern distribution, 183
finite horizon optimization, 91
finite-element method, 221
finite-time strategy, 92
first-order algorithm, 69, 76
fixed effect, 205
food tasting experiment, 214
formally incorrect model, 75
fractional-factorial design, 105

gamma distribution, 2
Gaussian process, 89, 149
gene expression, 197
generalized exponential model, 173
generalized linear model, 139
global ranking, 51
goodness-of-fit, 191

heteroscedastic errors, 131
high-throughput screening, 158
higher-order model, 13

identifiability, 139, 140
identifiability parameter, 139
imbalance, 2, 18
inferential viewpoint, 18
information, 230

information matrix, 66, 77, 99, 115, 151, 174, 184, 207
