Subject index

Allman elements, 347
EADG2x enhancement, 356
Special techniques, 357
Stabilization of spurious modes, 357
Procedure of [Jetteur, Frey, 1986], 359
Allman+EADG2x elements, 360
Allman shape functions
  Classical, 349
  for finite drilling rotation, 351
  Conditions to calculate mid-side displacement vector, 351
  Mid-side displacement vector for small strains, 353
Hierarchical shape functions of 2D quadrilateral, 348
Algorithmic schemes for finite rotations, 178, 202
  in initial tangent plane, 204
  in reference tangent plane, 205
  in current tangent plane, 208
Angular velocity
  Eulerian (spatial, or left), 212
  Lagrangian (material, or right), 214
Angular acceleration, 214
Angular velocity and acceleration for parametrizations, 214
Approximation of curved surfaces by four-node elements, 416
Automatic Differentiation, 265

Balance equations, 31
  Weak form, 32
  Four forms of virtual work of stress, 33

Bases for initial configuration, 235
Bases in FE computations, 249
Basic geometric definitions for shells, 49, 52
Bending; sinusoidal and cylindrical, 371
Bilinear elements with drill rotation, 341
  Enhanced EADG4, 341
  Assumed stress HR5-S, 342
  Assumed stress/enhanced strain HR7-S, 343
  Assumed stress & strain HW14-SS, 344
  Assumed stress & strain/enhanced strain HW18-SS, 345
Bilinear shape functions, 230
Calculation of drilling rotation for given displacement, 313
Cartesian bases, 6
  Product of vector and tensor, 6
  Transformation of components, 7
  Forward and backward-rotated objects, 8
Characteristics of tested shell elements, 421
Co-basis definition expressed by Jacobians, 245
Composition of rotation tensors, 170
Euler parameters (quaternions), 172
  semi-tangential vectors, 173
  canonical vectors, 175
  coaxial canonical vectors, 175
tangent & drilling rotation, 176
Euler angles, 177

Configuration space
  Classical, 22
  Extended, 30

Constitutive equations for shells, 97
  General form for shell resultants, 101
  Reduced, 107
    for ZNS condition, 108
    for incompressibility condition, 115

Constant strain patch tests, 424

Cook’s membrane, 361, 362, 432

Coordinates
  Natural, 50
  Skew, 291

Curvature of reference surface, 53
  Restriction and simplifications, 55, 56
  Warpage, 396

Curvature correction for beams, 379

Curved beam, 433

Deformation gradient, 54, 250

Derivatives of shape functions w.r.t.
  Cartesian coordinates, 20

Differential \( \chi \text{T} \), 188

Discrete Kirchhoff (DK) elements, 394

Displacement element \( Q_4 \), 272
  Compatible displacements, deformation
    gradient and Green strain, 272
  Approximation of strain, 273

Distortion test, 427

Drill RC for shells, 313
  Three forms, 314
    Rotational invariance, 315
    Difficulties in approximation, 317
  Expansion of \( Q^T F \) product, 319

EADG method for formulations with
  rotations, 337
  Modification motivated by EAS, 338

EAS for transverse shear strains, 393

Eigenvalues of a single element, 422

Element EADG4, 288
  Construction of enhancing matrix, 288
  Variational basis, 289

Element EAS4, 283
  Variational basis, 283
  Enhancing strain, 284
  Verification of orthogonality condition,
    285, 286

Verification of compatibility of
  enhancing strains, 287

Couplings in tangent matrix \( K \), 287

Element ID4, 278
  Original formulation, 278
  Modified formulation, 279
  Variational basis, 280
  Sufficient cond. to pass patch test, 280
  Modification of Jacobian inverse, 281
  Gradient of incompatible displacements, 282

Elements PS and HR5-S, 301, 306
  Assumed representation of stress, 302
  Verification of equilibrium equation for
    assumed stress, 303
  Verification of compatibility of strains
    for assumed stresses, 304

Element HW14-SS, 307, 309
  Assumed representation of strain, 307

Verification of compatibility of assumed
  strains, 308

Enhanced shell kinematics
  with in-plane twist rotation, 92
  with two normal stretches, 91
  with warping parameters for cross-
    section, 94
  with shift of the reference surface, 95

Enhanced strain elements, 277
  EADG4, 288
  EAS4, 283
  ID4, 278

Euler angles, 160
  Elementary rotation, 160
  Non-uniqueness, 163

Euler parameters, 144

Euler’s theorem, 135

Examples
  Geometry of cylinder, 57
  Twisted ring by 3D beam element, 210
  Unstable rotations of rigid body, 222
  Fast spinning (rigid) top, 224
  \( Inf-sup \) test, 301

Finite rotations for shells, 125

Five-parameter representation, 140
  Stereographic projection, 141
  in terms of components, 143

Formulations for Biot stress
AMBJ for isotropic material, 43
Virtual Work equation, 42
2-F functional for isotropic material, 44
3-F potential, 42
Formulations for nominal stress
4-F, 37
Virtual Work equation, 38
Weak form of basic equations, 38
4-F potential, 39
3-F, 40
Strain energy and constitutive law, 40
Virtual Work equation, 41
Weak form of basic equations, 40
3-F potential, 41
Formulations for second Piola–Kirchhoff stress, 45
Weak form of basic equations, 45
2-F functional, 47
3-F potential, 45
Formulation 2-F with unconstrained rotations, 48
Virtual Work equation, 48
2-F potential, 48
Forward-rotated shell strains variations, 78
Four-node elements with drilling rotation
Bilinear, 341
Allman-type, 347
Four-node elements without drilling rotation, 268
Displacement Q4, 272
Incompatible Displacement ID4, 278
Enhanced Assumed Strain EAS4, 283
Enhanced Assumed Displacement Gradient EADG4, 288
Hellinger–Reissner PS and HR5-S, 301
Hu–Washizu HW14-SS, 307
Functional
Hellinger–Reissner, 269
Hu–Washizu, 268
Potential energy, 270
Geometry and bases of shell element, 232
Hinged cylindrical panel, 443
Hyperboloidal shell, 453
Identity tensor consistent with kinematics, 55, 63
Implementation of drill RC in finite elements, 321
Basic method, 321, 323
Methods of optimization, 321
Penalty method, 325
Perturbed Lagrange method, 329
Incompressibility condition, 103, 104
for small strains, 118
Increment of Green strain, two forms, 253
Incremental constitutive equations for 3D, 98
for shell resultants, 99
for strain linear over thickness, 100
Increments of rotation vectors in two tangent planes, 179
Left composition, 180
Right composition, 186
Integration of strain energy over thickness, 260
Integration over element volume, 259
In-plane deformation with drilling rotation, 76
Instantaneous angular motion, 212
Invariance of a single element, 424
Inverse Jacobian, 244
Isoparametric approximations for shell elements, 231
Jacobian matrices, 240
for initial configuration, 241
Kirchhoff kinematics, 74
Kirchhoff limit for transverse shear constrained to zero, 394
Local Cartesian basis, 235
Local Jacobian and its inverse for vector of shape functions, 246
Local operations for shell element, 249
Local shell equations for shell resultants, for Biot stress, 86, 88
for second Piola–Kirchhoff stress, 91
Locking for sinusoidal bending,
RBF correction, 370
Long channel section beam, 452
L-shaped plate, 440
Membrane locking
2D arch element, 408
Curved shell elements, 408
Nine-node shell elements, 412
Membrane patch test for elements with drilling rotation, 426
Membrane strain of curved shallow shell, 411
Mixed formulations, 290
  Eigenvalues, 291
  Inf-sup (LBB) condition, 295
Mixed functionals with rotations
  Hu–Washizu, 339
  Hellinger–Reissner, 340
